

MEMOIRS
OF THE
HISTORICAL SOCIETY
OF
PENNSYLVANIA.

PHILADELPHIA:

PUBLISHED BY M'CARTY AND DAVIS,

No. 171 High Street.

.....
1826.

Eastern District of Pennsylvania, to wit:

BE IT REMEMBERED, That on the tenth day of December, in the fiftieth year of the Independence of the United States of America, A. D. 1825, **McCarty & Davis**, of the said district, have deposited in this office the title of a book, the right whereof they claim as proprietors, in the words following, to wit:

“Memoirs of the Historical Society of Pennsylvania.”

In conformity to the Act of the Congress of the United States, entitled “An Act for the encouragement of Learning, by securing the Copies of Maps, Charts, and Books, to the Authors and Proprietors of such Copies, during the times therein mentioned;”—and also to the Act, entitled, “An Act supplementary to an Act, entitled, “An Act for the encouragement of Learning, by securing the Copies of Maps, Charts, and Books, to the Authors and proprietors of such Copies during the times therein mentioned,” and extending the benefits thereof to the arts of Designing, Engraving, and Etching, Historical and other prints.”

D. CALDWELL,

Clerk of the Eastern District of Pennsylvania

ADVERTISEMENT.

THE Historical Society of Pennsylvania commences the publication of its transactions with the present number, and with the expectation of being able to issue a work of equal size every six months.

From the miscellaneous nature of the subjects, it is obvious that an adherence to chronological order would not be easy. The Society does not undertake to compose a history ; its desire is to collect materials for history. Remote and recent periods will, therefore, sometimes be found in immediate contact, or anachronous succession : the transactions of the seventeenth century may follow those of the nineteenth. But although historical order is impossible, the want of it, it is hoped, will not impair the interest which such collections usually excite ; and the variety of the facts may compensate for the irregularity of the arrangement.

The Circular Letter already extensively communicated, is included in the present publication ; and it is requested that every reader will consider it addressed to himself. On a general compliance with the wishes expressed in it, the Society founds its hopes of permanence and usefulness.

With the second half-volume, an index to the whole will be given.

Philadelphia, December 1825.

thing to instruct in the transactions of those days, when an honest, virtuous, and pious people, relinquishing their early possessions and enjoyments, laid in a wild and uncultivated country, the foundations of a State, now eminently great, successful and happy, we whose names are hereunto subjoined have united ourselves into a society, for the purpose of elucidating the civil, literary, and natural history of PENNSYLVANIA, and have adopted for our government the following

CONSTITUTION.

ARTICLE I.—This Association shall be denominated “The Historical Society of Pennsylvania.”

ARTICLE II.—The object of the society shall be the elucidation of the natural, civil, and literary history of this state.

ARTICLE III.—The society shall be composed of—1st. Contributing members.—2d. Corresponding members.—3d. Honorary members.

The *first* class shall consist of persons residing in the city of Philadelphia, or the state of Pennsylvania, within ten miles of the city.

The *second* class of persons residing in any other part of Pennsylvania.

The *third* class of persons residing in any part of America or elsewhere, and females may be admitted into it. No person shall be eligible in the first or second class, unless he be a native of Pennsylvania, or shall have been domiciliated there for the space of ten years.

ARTICLE IV.—The officers of the society, who shall be annually chosen, shall be a President, four Vice Presidents, two of whom shall be inhabitants of the City or County of Philadelphia, a Treasurer, a Corresponding Secretary, a Recording Secretary, and a Curator.

ARTICLE V.—There shall also be annually elected a *Council*, to consist of thirteen members, besides the above named officers, who shall be *ex officio* members of the Council. Seven members shall constitute a quorum. It shall be the duty of the Council to receive donations made to the Society, and to take suitable care of the books, and other property, to superintend the correspondence of the Society, to digest and prepare business, and to execute such other duties, as may from time to time be committed to them by the Society. They shall have power to make rules for their own government in their meetings. They shall meet at least once a month and may adjourn to shorter periods. At every quarterly meeting of the Society they shall make a report of the acquisitions and transactions of the preceding quarter. At the meetings of the Council, the contributing members shall be at liberty to attend, and may propose any matters for consideration, but shall not be entitled to vote. The Council may be specially convened at any time by the President, or one of the Vice Presidents.

ARTICLE VI.—The Society shall meet quarterly, to wit, on the first Monday of February, May, August and November; but the President, or in

his absence, either of the Vice Presidents may call a special meeting, on giving three days notice thereof, in at least two of the daily Newspapers published in Philadelphia. The election of Officers and of the Council, shall take place at the quarterly meeting in February, and shall be decided by a majority of ballots. The Society may adjourn from time to time. An annual discourse shall be delivered by one of the members, who shall be appointed for that purpose by the Council; and dissertations, connected with the general objects of the Society, may be read by any of the members at any of its meetings. When the annual discourse is delivered, strangers may be admitted. The Society may, from time to time, appoint special committees for the purpose of investigating particular subjects, who shall report to the Council, which latter shall select such parts thereof as they may deem expedient to lay before the Society.

ARTICLE VII.—The Council shall have power to elect contributing, corresponding, and honorary members of the Society; but all such elections shall be by ballot, and three negative votes shall prevent the election of any candidate.

ARTICLE VIII.—This Constitution may be amended at any quarterly meeting of the Society, provided that a notice of the intended amendment shall have been given, and entered on the journals of the Society at a preceding quarterly meeting.

CIRCULAR.

Philadelphia, June 21, 1825.

SIR—A number of persons, feeling an interest in the collection and preservation of whatever may conduce to the knowledge of the History of Pennsylvania, have formed a society under the title of “The Historical Society of Pennsylvania.”

Their objects are to trace all the circumstances of its early settlement—its successful progress and its present state ;—to collect all the documents and written or printed evidence, and all the traditionary information that may still be attainable, and, after having thus acquired possession of sufficient materials, it will be the office of one or more committees, to select what may be deemed generally interesting and instructive, to methodise and arrange it, and to lay it in a proper form before the public.

It is obvious that the more copious these collections are, the greater will be the means of a judicious and satisfactory selection, and it is therefore the ardent hope of the Society, that persons in possession of documents of the nature described in the following list, will feel a common, it may be

said a patriotic interest, in contributing to the general purpose, by favouring the Society, either as donations or loans, with any works of the following description, viz.

Original letters, books, journals or narratives of the early settlers of Pennsylvania, or of any distinguished persons among us in later times. Narratives relative to the Indians; wars or treaties with them; and the general intercourse between them and Europeans, or among the Indians themselves. Vocabularies or other indications of their language. Accounts of missionaries, public messengers and travellers among them.

Any facts or reasoning that may throw light on the doubtful question of the origin of the North American Indians.

Copies of records, and proceedings of any public bodies, of a political, religious, literary, or other character, that have at any time existed among us.

Accounts of universities, colleges, academies, and schools, their origin and progress.

Topographical descriptions of cities, towns, boroughs, counties, or townships.

Accounts of the population, births, longevity, deaths, endemial or local diseases—facts relative to climate, meteorological remarks, general employment or peculiar customs of each district.

Biographical notices of any eminent persons, or of any persons in respect to whom remarkable events may have happened.

As it is the intention of the Society to form an am-

ple library and cabinet, it will gratefully receive all donations of books, pamphlets, or manuscripts, on any subject or of any date ; medals, coins, or any other article deriving value from historical or biographical affinities: Indian idols, ornaments, arms, or utensils, &c.

The name of the donor will be noted in the library or the cabinet, and in the journals.

Be pleased to address your communications to JOSEPH HOPKINSON, Corresponding Secretary, or GERARD RALSTON, Curator of the Society.

By order,

WILLIAM RAWLE, *President.*

JOSEPH HOPKINSON, *Secretary.*

At a meeting of "The Historical Society of Pennsylvania," held at Philadelphia, on the 7th day of November, 1825, it was

Resolved, That the thanks of the Society be presented to the President for his learned and instructive discourse, pronounced on the 5th instant, and that he be requested to furnish a copy for publication. .

From the Minutes.

T. M. PETTIT, *Secretary*.

AN
INAUGURAL DISCOURSE,

DELIVERED ON THE

5th of November, 1825,

BEFORE THE

HISTORICAL SOCIETY

OF

PENNSYLVANIA,

BY WILLIAM RAWLE, Esq.

President of the Society.

DISCOURSE, &c.

Gentlemen,

THE intention to form this society, was unknown to me, till your partiality led you to request me to undertake the office of President, and however unqualified, I have not hesitated to accept it. I have been led to this conclusion partly from the respect I felt for those who honoured me by the selection, and partly because I have long wished to see an institution of this sort established among us.

Upwards of one hundred and forty years have elapsed since the peaceful companions of *William Penn* landed on the shores of the *Delaware*.

Except their friend and guide, they numbered no distinguished character among them; they were annoyed by no candidate for superior rank, no emblazoned warrior, or lofty member of a proud aristocracy: they were humble men of moderate fortunes—most of them adherents to a sect of recent origin whose motto was meekness and benevolence.

Their departure from their native lands was unrestrained and almost unnoticed. In quietness they embarked and in quietness they landed. *Here* they encountered no embittered foe, they met no herds of indignant natives thronging to resist them, for the natives were already partially acquainted with Englishmen, and with this particular description of Englishmen. Several years before the date of William Penn's charter, the society of *Friends* had begun to settle in *New Jersey*. They had fixed themselves at *Salem* and at *Burlington*, and the vessels which brought out additions to their numbers had occasionally stopped at *New Castle*, and at *Shachamaxon*, now *Kensington*. Many *Swedish* settlements between these points, including *Chester* and *Tinicum*, had already proved the tractable disposition of the natives, and all was harmony and peace between them.

The admirer of pomp and worldly rank, the lover of lofty deeds in arms, the ardent inquirer after stupendous adventure and miraculous preservations, will therefore find little gratification in tracing the simple progress of our early history. It is a plain and humble tale.

The first colonists were invited in Europe by William Penn, in the most fair and candid manner, to become, not conquerors but cultivators of the soil; to conciliate, not to extirpate the natives—to earn their bread by labour, not to acquire wealth by the prodigality of chance, the pursuit of pre-

cious metals, or by reducing the helpless natives to slavery. They felt no disappointment when they found, that woods were to be prostrated, cabins to be erected, the earth to be opened, and its slow returns received, before subsistence was obtained. They relied on the smiles of a gracious Providence, but they knew that His aid is only granted to those who exert all their own faculties to help themselves.

It may perhaps be fastidiously asked, what interest can be found in the narrative of husbandmen or manufacturers, whose days were spent in unvaried labour and whose nights were disturbed by no external alarms, who prosecuted in peaceful and obscure succession, the same alternation of toil and rest that are practised by men of similar occupations over all the earth? Why does the peasant of Pennsylvania in her early days, deserve a higher place in history than the peasant of England or of France?

To this we answer that to our predecessors these mere labourers of our soil, *we* look for the elements of that success which almost uniformly has accompanied our progress, and on the same principles the relation may also be of value to others.

The character of a nation although not always fixed by the character of those with whom it originates, often retains a tincture from it that affects its subsequent course. And hence it follows, that when we see a nation rolling tumultuously down

the torrent of time invading, overwhelming, and destroying whatever falls in its way, we are led to inquire whether its origin was not a military association.

When we perceive another steadily pursuing a course of peace and concord both at home and abroad, we are induced to suppose that it arose from the voluntary or casual union of men who cultivated the earth with honest labour or in other occupations confined themselves to useful industry, uninterrupted by the calculations of ambition or the incentives to violence and injustice.

If we are sometimes disappointed in such inquiries it is from the want of this elementary evidence.

It is true, that however carefully and wisely, the foundations of society may at first be laid, we cannot always depend on their permanence. New motives; unexpected exigencies sometimes arise, changing or totally subverting all original principles. The Arabian Shepherd becomes a warrior. The Teutonic Chiefs sink into peaceful farmers of the land which they have subdued.

Yet still—if we wish to understand the nature of man, to become acquainted with ourselves; it is our duty—and in the prosecution of that duty, we shall find it a delight, to ascend to the rudiments of social existence; to elicit theory from facts, and not to imagine facts for the purpose of supporting theories; and thus, if possible, to discover by what means, order, peace, and happiness

have been, or hereafter may be rendered most permanent and secure.

How little of this has been done in respect to the nations of the other three continents !

How interesting, how instructive it would be to learn the early institutions and original habits of the Egyptians, the parents of European science and civilization : of Etruria believed to have made such advances in moral and political refinement before the overwhelming power of Rome began or of Britain, for ages before the wanton invasion of Cæsar !

There is a power invisible and often irresistible which while it sweeps away the grandeur of nations and the toils of men, involves in its destruction the full evidence of their former existence, and leaves us but the imperfect consciousness of the loss.

To counteract this power as far as possible, to collect all the materials, that have not yet entirely disappeared, to preserve all the abundance which the events of every day supply, and to hand them down in authentic form to posterity, is at present felt to be a duty.

Illiterate nations, depending on oral tradition, soon become ignorant of their own history.

How loose and obscure is all that can be gathered from the natives of this country in respect to their times of old.

Both in Europe, and here, recourse is had to

poetic fiction down to the time when history received the aid of letters.

But we have the advantage of letters and of the press, and we ought to avail ourselves of these inestimable *mechanic powers* lest we incur the reproaches of posterity—centuries hence—when, according to the uncertain course of human events, we may be regarded either as an example to be followed, or a beacon to be shunned.

In Pennsylvania I know not of any association expressly formed for these purposes, prior to the institution of the Historical and Literary Committee of the American Philosophical Society, in the year 1815.

This committee has succeeded in obtaining a valuable collection of historical memorials including many manuscripts relating not only to this state, but to other parts of the United States; for, in their formation they were charged to extend their inquiries to the whole continent and to the islands of America, although the leading objects were the history, geography and statistics of Pennsylvania.

In 1819, they enriched the world with a publication of Heckewelder's "account of the history, manners and customs of the Indian nations who once inhabited Pennsylvania and the neighbouring states." In praise of this luminous, impartial, and minute relation, drawn from a personal intercourse of many years, too much cannot be said. The author was well known to many of us, he was disinterested, unassuming and pious, and the fullest

confidence may be placed in all that he relates, from his own observations.

If this Committee should do no more than it has done in publishing this work, it would still be entitled to our acknowledgments. Six years have intervened and nothing further has appeared nor has a full catalogue of their library, or their cabinet been communicated to the public. Yet it is not to be understood that this institution is intentionally locked up from general use, nor that the paucity of its communications evinces either jealousy or apathy in its members. The radical defect is, that it consists only of those who are themselves members of the Philosophical Society, and no one can be associated in the Committee who is not a member of the Society. Fewer interests are therefore combined, and the public looks on them with indifference.

The Society to commemorate the landing of William Penn, is expressly confined to the subject designated by its title, and while I trust that the patriotic and highly honourable feeling which led to its formation, will long continue, I cannot conceive that it is sufficiently comprehensive for purposes we have in view.

The members of an historical society ought to be numerous, perhaps unlimited. All who feel a strong interest in its general views ought to be admissible, and every inhabitant of our state ought to feel that interest. All should be excited to throw into one receptacle whatever they possess of original or in-

structive matter—not to be locked up till it moulders into oblivion ; but to be subject to the immediate process of careful investigation, till by comparison and selection, such results may be drawn as our cotemporaries may receive with satisfaction and posterity with advantage.

To promote these leading views I took the liberty to suggest, and you have been pleased to adopt the idea, that certain permanent committees should be appointed, by some one of which most of our objects will probably be embraced, and to one or more of which every member should be attached, though not confined.

“The national origin, early difficulties, and domestic habits of the first settlers,” seemed at once to strike the mind, and were assigned to the first of these committees.

It is impossible to contemplate without emotion, the original introduction of the man of Europe to the native of America. Colour, habiliments, language, arts, and customs all how unlike ! The Indian, ignorant of the existence of such a country as Europe, gazing with astonishment at a new species of beings, whose views in visiting him he cannot comprehend. The European, doubting of the reception he shall meet with and uncertain whether conciliation or intimidation will be his best resource.

I speak now of the first discoveries, of the Spaniards to the south, the English, the Dutch, and the French to the north. But these strong contrasts do

not altogether apply to Pennsylvania. Between the English colonies of Virginia and New England, it was conceived by the Swedes that there lay a tract of valuable country to which no European power had a claim, and desirous of sharing in the harvest of colonization, always alluring to European sovereigns, and in those days enthusiastically pursued by most of them, Gustavus Adolphus could not remain inactive.

Having suffered others to precede him, little remained for him to appropriate ; but the accounts received of the easy access and natural fertility of this spot, encouraged him to make the attempt, and in 1626, his royal sanction was given by proclamation at Stockholm, to the commencement of a colony under the usual pretences.

1st. That the christian religion would thereby be planted among the heathens.

2d. That his majesty would by these means, enlarge his dominions, enrich the treasury and lessen the public duties.*

With these new adventurers the principle adopted seems to have been that of conciliation. I shall have occasion again to advert to it.

The peculiar part of the present subject is the variety of national origin which characterised the infant colony of Pennsylvania.

The settlements of New England and of Virginia

* See Holme's History of New Sweedland printed at Stockholm in 1702, reprinted by the New York Historical Society. Vol. 2. p. 345.

proper were of a homogeneous character. They were all Englishmen. New York and East New Jersey contained a mixture. The Dutch, originally settled there remained under their ultimate conqueror Nichols; confirmed in their private property, but submitting in all things to the new government imposed on them by the authority of the Duke of York.

On the western shore of the Delaware, commencing at Cape Henlopen and extending to the falls, a distance of 160 miles, there was found a mingled assemblage of Swedes, Dutch, and a few English, whose history though narrow, is deserving of notice.

By these precessions the "early difficulties" of Penn's colonists were doubtless diminished, yet there still remained much to encounter, particularly by those who arrived at an ill chosen time of the year.

And the habits, the domestic habits, pure, simple, and industrious, attributable in respect to some, to the meek and peaceable religion they possessed, in respect to others in part to this example, and in part to surrounding circumstances, merit and doubtless will receive a full investigation and an accurate portraiture.

In pursuing these inquiries the mind will insensibly be led from facts to persons, and all the "biographical notices of the founder and his family, and of the early settlers," which the public is not already possessed of, will prove highly interesting,

not only to their descendants, but to those who delight in tracing through all its recesses the history of man.

Of the founder of Pennsylvania, though the public knows much, it does not perhaps know all. There is reason to believe that many private documents are still in existence, which would present to us in colours strong and true, the enlightening, vivifying and chastening power of his genius on all around him, while the colony hung on him as their judge, their legislator, and their guide. Their distant friends, their native homes, their early affections and enjoyments, renounced and abandoned for ever, were replaced and compensated, and heightened in all their value, not by land or buildings, but by the presence and the overshadowing and indiscriminating sympathy, and paternal care of William Penn.

The committee expressly appointed for this purpose will give and receive assistance from liberal and frequent communications with that first mentioned and with the following.

Biographical curiosity and utility will not be confined to the first age of Pennsylvania. There are men who have revealed great superiorities of intellect, and have made noble advances in science, who have conceived and promoted systems of public benefit, or have added to the stock of elegant literature; many such men succeeded to the first class of settlers. Many such have not long been removed from us. We owe it to ourselves for present

excitement and imitation—we owe it to posterity, to collect before it is too late, whatever was great and eminent, whatever was singularly virtuous and wise among those of old, or those whose graves may still be marked by the freshness of the sod, or the unextinguished lamentations of their friends. *Nay*, this committee will perform a legitimate office in recording whatever is remarkable on the score of mere singularity.

The irregularities of the human mind form a part of its genuine history. It is profitable to study, and delightful to understand the manners of different nations. In some degree the same pleasure may be felt, and the same advantage drawn from contemplating the difference among individuals of whom nations are composed. There is generally, in personal singularity, much to avoid and condemn, but we may occasionally find something to excuse, and even sometimes to approve.

A fourth committee is charged with a view of the “revenues, expenses and general polity of the government of Pennsylvania,” and from its labours is expected a mass of historical information that may furnish useful assistance to present and future statesmen.

While the public expense was small—while property rested on a few simple elements, before the increase of commerce and the consequent introduction of artificial intricate systems, taxation direct or indirect, must have been simple.

The supposed or real necessity of issuing the

first paper money, its effects upon the people, the mode of redeeming it, the objects to which revenues in any shape were applied, will be delineated. But larger views may be united with these inquiries. The "general polity" of Provincial Pennsylvania will gradually come before us. We shall trace step by step its own internal peace and order and happiness in the outset; its abhorrence of all violence and vice. We shall inquire whether when misrule or discord in any shape appeared, they were to be ascribed to ourselves or to some visible external impulse or some extraneous principle covertly introduced among us.

And this committee will no doubt fearlessly and faithfully furnish us with all that can enable us to decide, in what instances and from what causes there have been any material aberrations from the original principles and primary systems of a sage whose merits and whose fame in every branch of civil government, have been celebrated over the world and should ever remain deeply engraven on our hearts.

Connected in a degree with this committee, but pursuing some diversity in the objects of investigation is the inquiry into "the principles to which the rapid population of Pennsylvania may be ascribed."

It is a general opinion that a severe oppressive government impedes the natural tendency of mankind to increase. Yet, this opinion has been shaken by the late exposure of the state of popu-

lation in Ireland. Rudely as that unfortunate country is treated by its jealous and unfeeling masters in England, we are assured that the human race has nearly quadrupled itself, in the last hundred years. Some other principle must therefore be sought. Is it the facility of obtaining subsistence? To this we are likewise referred by many as the true cause of a liberal population. Yet here again the example weakens, if it does not refute the position. Is it the consciousness of the security of individual property? Alas, while the unhappy peasantry of Ireland have so little that they can call their own, even this little is rendered uncertain, by the occasional and irregular inroads of fiscal or ecclesiastical rapacity.

The subject thus devolved on the committee, will therefore be found not entirely to depend on the general polity of our government, not entirely on the fertility of soil or security of property, it will call for the most deliberate and profound investigation, it will lead to the most laborious and acute discriminations, and conducted, as no doubt they will be, the labours of this committee will contribute to enlarge the stock of public information and enlighten the universal family of man.

Another, not much less diffusive ground will be taken by the committee "on the progress and present state of agriculture, manufactures, and commerce in Pennsylvania."

From the opening of the virgin soil to receive the aboriginal grain by the early settler, now for

the first time become acquainted with it, to the extensive cultivation of the whole face of the country; from the first rough manufacture of domestic implements, to the fabrication of almost every article of necessity, or luxury—from the humble traffic of one plantation with another to the expanded commerce of the world, how interesting, how instructive it will be to view the gradual and profitable progress.

There will be rests and stops in the history on which it may be convenient to dwell for a time.

Thus we may consider the manufacturing and commercial history of our province down to the peace of 1763.

A second stage would be down to the commencement of the war of the revolution, and from that period to the present day.

Statistical tables at these or some other periods, which the committee may on consideration prefer, will be acceptable adjuncts to their reports.

The progress of those liberal and judicious plans of internal improvement in which so many excellent citizens are now zealously engaged, may also form proper subjects of historical report. If we do not, as a body, participate in their labours, we may, at last, have the pleasure to record them.

Two other committees whose functions are sufficiently indicated by their titles, will greatly contribute to the promotion of useful knowledge on points which interest us all.

“The medical history of Pennsylvania” will

naturally lead the inquirers into a view of the pharmacy and chirurgery of the natives, with those will be connected the early medical practice of the colonists.

The necessary relation of pharmaceutics to climate and situation—the discoveries and improvements of physicians—the history of local or endemial diseases—the successive opinions that have been entertained as to their causes, and their treatment—these and many other subjects will render the reports of this committee highly valuable to us all.

The “juridical history of Pennsylvania” seems at first view more confined, and if we consider law, merely in the light of positive and local obligation, the impression would be just. But as a general science proceeding from a divine source and intended to be adapted to the nature of man—the earliest regulations of even the rudest nations, deserve attention because they show the conception of the general system, entertained at different times and in different places. Localities, national employment and other circumstances diversify the application of principles, but the philosophic mind is gratified in tracing through the incumbrances of forms and modes of positive enactment, the great rudiments of moral obligation and universal law. Our first acts of legislation are to be expounded by the political situation of the province—by the subordination to the parent country, and the veneration naturally felt for its institutions, by the strong

bold counteractions of some of those institutions necessarily resulting from the removal to a new country—from the intermixture of men of a different origin—from the predominance of peaceful religious principles, and similar considerations, all of which will suggest to the committee that the benefit of its accurate researches will not be confined to one profession nor to Pennsylvania.

They will enter into the history of general jurisprudence, and perhaps enable future Grotiuses and Montesquieus to correct some of the few errors into which they have occasionally fallen.

“The literary history of Pennsylvania” is consigned to another committee, and let no one smile at the mention of the literary history of Pennsylvania.

It is true, that in the outset the obligation of attending to the first necessities of life, cannot be supposed to have left much leisure for the decorations of polite learning; and that the press, (for a printing press was established here as early as 1686,) was probably occupied entirely with public proceedings, matters of mere business, or the polemical pamphlets ensuing from Keith’s controversy with the friends.

But William Penn was himself a man of letters, and he had those about him who also possessed learning and delighted in books *

* An account of our early institutions for the instruction of youth, may also be expected from this committee. Of these, the first com-

A most important branch of disquisition still remains which has also been assigned to a special committee. It is that which relates to the aboriginal inhabitants of Pennsylvania, and incidentally of all this vast country.

The true condition of the northern part of America before the discoveries of Columbus, cannot now be ascertained. In the islands he found an improved, an agricultural, and a numerous people. Hispaniola alone was computed to contain a million of inhabitants.* When Cortez boldly and unjustly penetrated into the heart of the Mexican empire, he discovered an organised power, pursuing in tranquillity and peace the arts of civilized life ; and the subsequent invasion of Peru by Pizarro produced the same result. In respect to these parts of the great continent at that time, history is little at a loss. Only some obscure and remote tribes, scarcely recognized by the general government of the country, and in many cases be-

menced under a liberal charter from William Penn, and is still in *flourishing existence*. It contributes to remove an erroneous opinion entertained by *some*, that the Society of Friends is generally *opposed* to much human learning. Their *Barclay*, their *Logan*, their *Story*, are proofs to the contrary. Whoever reads the book so highly and justly prized by them, entitled “*No Cross No Crown*,” composed by William Penn, while *immured in the Tower*, will find a *profusion* of ancient learning. And the *only general* history of Pennsylvania that has *yet* been attempted, was by a man of great erudition, a member of this society, and the principal teacher in the institution above mentioned.

* Robertson, vol. i. p. 227. he quotes Berrera.

yond the reach of their power, remained unvisited and unknown.

But of North America we have less certain knowledge. The first settlers, comparatively few, exploring less the interior of the country than its harbours and its streams, were acquainted only with the inhabitants in the vicinity of their own settlements. A knowledge of those remote from the coast was slowly and gradually obtained. The English power does not appear to have set on foot any expedition for mere inland discovery.

A Spaniard (*De Soto*,) and two Frenchman (*De La Salle*, and *Hennepin*,) were the only persons who in early times carried on expeditions through the interior, chiefly for purposes of discovery as well of its topography, as of the character, numbers and manners of its native inhabitants.

It is unaccountable that no such measure was undertaken by the active and enlightened William Penn.

If such inquiries had been made, if intelligent persons had explored the whole country from North to South, from the Atlantic Ocean to the Mississippi, we should probably be possessed of certain and valuable information in respect to the "names, the numbers, the habits, and the history" of many nations which have now wholly disappeared from the chart of human existence.

It is not, however, supposed that a much greater degree of what we term civilization,

would at that time have been discovered among them. Whatever were their advances in moral improvement, and the arts of life, at, or before the times when those mounds and structures took place of which we are unable to discover the causes, or the agents, it is possible that their inquiries would not have yielded full satisfaction. Yet those travellers would have been considerably nearer to the times of their construction, and if, notwithstanding their efforts to be informed, doubt and obscurity still continued, it would have afforded further proof that the original settlement of this country, from whencesoever it proceeded, was of most remote antiquity.

The fate of nations is not always the same. They do not, perhaps they cannot, consistently with the character of man, always continue at the same point.

Knowledge and improvement advance slowly—the condition of society becomes more happy as they advance. When the point of extreme refinement is attained, the enervation of luxury generally invites foreign invasion. A yoke is imposed, sometimes lightened by the wisdom of civilized conquerors, sometimes rendered heavy and oppressive by uncultivated barbarians. In either case the subjugated nation with its independence loses its ardour for a continuance and enjoyment of those arts and sciences which it had previously attained. In the latter case particularly, barbarism when it triumphs, delights to

overthrow and eradicate whatever has formed the ornament and felicity of those whom it subdues. Thus Egypt preserved under the domination of the Romans, a secondary, but still a valuable station in the world of letters. Its rude Arabian conquerors inflamed by bigotry and blinded by their own ignorance, overwhelmed and destroyed the remnants of their ancient civilization, and reduced them almost instantaneously to a barbarism beyond their own. There is scarcely a set of people now to be found more ignorant and degraded than the *Fellahs* and the *Copts* of Egypt.

The total subversion of knowledge and improvement is perhaps always the effect of external force. Nations do not spontaneously relapse into rudeness and ignorance.

During the long and absolute domination of the Romans in Britain, their literary cultivation and polished habits may have been partially communicated to the natives; of this however we can speak with no certainty, but we are fully apprised that on the final departure of the Romans, the Britons soon became, perhaps, as uninformed and unimproved as they were before, and certainly more timid, helpless, and inert. Learning soon decayed, or was confined to their priesthood, and the ardour of a national spirit, the only source of national excellence, was wholly extinguished.

If from any cause, there is reason to suppose that science and the arts were once more highly cultivated in this country; that civilization and im-

provement once existed in a greater degree than the first Europeans found them, we must attribute their decline to some external cause of the nature before described.

Are those, whom we found in possession, the rude victors and final extirpators of a former population more enlightened and refined? Or has there been a temporary occupation of the land by a superior and improved nation which has afterwards migrated further south, and left the original inhabitants, as the Romans left the Britons, to their ancient unaltered habits?

Heckewelder reports the Indian traditions that all this part of the country was conquered by the Lenapi a nation from the west—whom we found in possession and to whom we gave the name of Delawares. It is said to have been previously inhabited by the Allegewis whom the Lenapis, on what is stated to be a just cause of war, utterly subdued and expelled.

But what was the origin of the Lenapi?

The present condition of these ancient lords of the soil, merits our close attention. If in the 15th century a map had been published of this part of our great continent and a colour had been adopted to designate the inhabitants we should have seen the whole surface the same. By degrees, as European colonies were planted and extended, slender lines marked by various appropriated hues, would have been visible on the coast, gradually widening westward till the indigenous tint became

almost extinct. Of the many hundred thousands who then held this country as their own, how few, how scattered and in some cases how miserable are their descendants. Let us for a moment place the map before us, and contemplate the slender number that yet remain eastward of the Mississippi.

A report made by the Secretary of war during the present year founded on careful inquiry reduces them to about 80,000.

It would occupy too much time to give you the details. It is sufficient to observe that their numbers are the smallest in the most ancient state. Virginia is reported to contain but 47. In Pennsylvania though one of the youngest of the original colonies, I know of none, except the remains of Cornplanter's family for whose use a tract of land was secured by an act of the legislature in 1791. They follow agriculture and occasionally take their products to Pittsburg.

In some of our states they are kindly treated, and protected by the government.

To prevent the artifices of men who might avail themselves of their ignorance they have consented to be legally incapacitated from aliening their lands on any consideration and to any persons, and to promote their civilization and improvement, great pains are taken in many places to educate their children and to instruct the whole of them in agriculture and the common arts and manufactures.

Many pious and benevolent Christians have re-

linquished the enjoyments of civilized life and devoted themselves to the endeavour to improve the inhabitants of these little isolated communities. There seems to have been more encouragement for such attempts than has been afforded to the generous missionaries who have heretofore encountered the hardships of savage life among the entire tribes in their own country. Those efforts after much counteraction from the priests and jugglers of the natives, have sometimes indeed been attended with partial success, but in the frequent revolutions produced by war among themselves; the encroachments of the whites; cessions and emigrations, the traces of improvement disappear, and the disheartened labourers have retired from the field with the feelings of the husbandman who sees his harvest destroyed by the violence of a tempest.

In the smaller settlements thus patronized and secured, the success, though limited in extent, may be hoped to be permanent. On this occasion I cannot avoid adverting to the exemplary course pursued by the society of *Friends* acting under the yearly meeting of Philadelphia.

The once numerous tribe of the Senecas with some of the Onondagoes, formerly component parts of the great Iroquois confederacy, now reduced to about 650 persons, are seated on a small tract of land on the Allegheny river. It lies in the state of New York, and was reserved and promised to be secured to them for ever by that state. About

thirty years ago, the settlement attracted the attention of this religious society. It was proposed to improve at least their moral condition, to suppress their fondness for the chase, and their habits of intemperance and idleness, and thus gradually to open their minds to the reception of the pure religion of the gospel. For this purpose it was conceived, that occasional visits and exhortations would prove inadequate. It was determined to do more, to set them examples by the delegation of prudent and industrious persons who would settle, not among them, for that would have been inconsistent with the state regulations, but as near to them as possible, and individuals were accordingly selected who devoted themselves to a task of which a sense of duty may be conceived to constitute the principal pleasure.

Land was purchased, buildings erected, and men and women friends fixed themselves upon it. Agriculture and some of the mechanic arts are practised and successfully imitated by the natives. The women friends have instructed the female Indians in such of the domestic arts as come within their sphere. A school is kept, and “pains are taken
“to impress the great duties of morality and to
“lead on to that state of mind which delights in
“communion with, and in the approbation of their
“Creator, the Great Spirit; but the peculiar doctrines of christianity have not yet generally been
“pressed further than to give lessons of reading in
“the old and new testaments.”

By these modes of proceeding the kindest affections of the natives have been conciliated, even the turbulent Red Jacket, the chief who so lately complained to the New York legislature of the intrusion of christian missionaries, has expressed his approbation of the conduct of these friends and the settlement at Cattaraugus, another Indian reserve at the distance of thirty miles, have strenuously urged the society to open a school among them also.

Here we see the spirit of Penn. His system seems to have been to soften and enlarge the Indian heart, before attempting to press upon it those sublime doctrines which could not be immediately comprehended; and it has been pursued to the happiest effects by this benevolent society, in their quiet unassuming manner, without calling on the public for assistance or applause.*

Among some of the southern Indians, the same benevolent efforts have been pursued on a large scale, at the expense of the United States.†

From these pleasing contemplations we turn with regret to those different opinions which seem to prevail among some of our fellow citizens: opinions which are likely, unless they shall be overpowered

* The missionaries among the Chretaws, established in 1817, are understood to have adopted the same course.

† See the message of the President, March 30, 1824, and the report of the Secretary of War, attached to the subsequent message of January 27, 1825.

by mild, good sense, and calm reflection, to produce consequences injurious both to our peace and reputation.

It would be rash to assert, that in the comparative estimate of the original, and the now predominant population of America; society has not been a gainer by the vast ascendancy of the latter.

It would be the folly of enthusiasm to conceive that if this part of our great continent still remained in the exclusive possession of its ancient inhabitants without an alteration of their ancient manners, the general interests of man would be promoted. No, the great and glorious spectacle exhibited by the formation of the United States into one body; by her attainments in science; her self-defence in war: her rational principles of liberty, and her novel and sublime system of government, would have been unknown to the world, but for the discovery and settlement of North America.

The permanent basis of every government, must, however, be the principle of justice.

Have we then justly acquired a right to the soil on which we tread—on which we have erected our edifices, established our political systems, and proclaimed ourselves to the world, a free, a sovereign, and an enlightened people?

The inquiry in itself, is highly interesting, and as it leads to an examination of our ancient history, is for this society, not improper.

A right to the soil depends on the mode by which possession was acquired. It is only by mi-

litary conquest, or voluntary cession, that the rights of the original occupants are divested. But if the conquest is made by invaders without right, the title is as illegitimate as the war by which it is supposed to be acquired. Such acquisitions, founded only on superior force, are destitute of moral sanction, and do not extinguish the original rights of the prior occupants.

The Europeans could claim no right by conquest, for they had received no previous injury to justify a war. The natives of this continent were utterly ignorant even of the existence of such a place as Europe, till we poured upon them our adventurers, our refinements and our vices.

There was, therefore, no pretence for depriving them of their land, except the feeble one, that although in their actual sovereign possession, their modes of making use of the soil were such as gave them no title to it. That is, that they did not till the ground, nor live in condensed bodies; but, depending on the chase, roamed loosely and at large, over the vast tracts which they ignorantly supposed were their own. For we may dismiss, with a sigh at human perversity, the still less founded allegation, that the extension of the Christian religion would justify the seizure of the property, and the destruction of the persons of the natives.

Let us then bestow a short consideration on the other supposed justification of European right to divest American proprietors.

A few principles will be concisely laid down.

1. Property is another word for dominion. The right to hold, to regulate, to dispose of lands, or any other subject.

2. We read in holy writ, that God gave to *Adam* dominion over the earth. Dominion thus became a quality incident to rational existence, it was given to man alone, and it was given without qualification or restraint.

3. If we can discover no restriction in the first donation, where else are we to look for it? If we do not find it in the outset imposed as a condition upon man, that he shall raise his own subsistence by the cultivation of the soil, or the domestication of animals, we can find no power elsewhere to impose such a condition.

4. Nations are moral entities, knowing no superior coercive power, but bound for their own interests, faithfully and uniformly to adhere to the principles of virtue and justice.

The advantages derived from mere power continue only as long as the power continues. The advantages of pursuing a course of virtue and justice are certain and permanent.

What would be unlawful in an individual would be unlawful in a nation, and the latter is not exempted from its obligation by not being subjected to that coercive power which restrains or punishes the individual.

We may therefore consider it as an axiom, that one nation depriving another of its property by

a mode which would be unlawful in an individual is no less guilty than the individual would be.

5. A nation has no right to sieze lands within the known limits of another nation under the pretence that there are no individual occupants on it. Such lands are the property of the nation within whose boundaries they lie ; and it has the sole right to grant them to others, or to make use of them in such way as its government may think proper.

Internal causes may induce the government to retain them in its own hands for a time, to dispose of them in succession to its own citizens, or to exclude all persons from cultivating them. In England there are large bodies of land which have lain waste and uninhabited for ages. They are considered as belonging to the nation and cannot be enclosed without a legislative act. And with us, when the Indian titles to particular bodies of land has been fairly acquired, the lands become, in point of fact, vacant, till the government disposes of them to purchasers.

Our European neighbours, the British in Canada, or the Spaniards to the south, never had the fatuity to conceive that they had a right in the mean time to enter on such lands, and appropriate them to themselves.

A case may however be supposed, but history does not to my memory, furnish such an instance, of the total extirpation of a nation by disease, when all its lands would return to the bosom of

nature open to the right of the next occupants. There was indeed a pretence of this sort set up by one of our first colonies. A mortal disease had swept away so many of the original inhabitants that the Plymouth colony, considering it as they declared, almost a Providential preparation for their settlement, conceived that they had no more to do than to take possession of the vacancy.

The maxim that *dominium vacuum ceditur occupanti*, was strenuously enforced, but it soon produced sanguinary evidence, that the case supposed had not happened, and that the nation whose lands they seized, was not annihilated.

Speculative writers, and some of great eminence, have hazarded opinions on the other branch of this subject, that is the connection of the right to the soil, with the mode in which it is employed, which in themselves would be of little moment, because their practical effect has been but partial, were it not that late political movements among ourselves seem to have revived them with a formidable aspect.

The argument is, that to promote the increase of population is a great principle which ought to govern all mankind. And some even assert that it is a divine command, that the earth shall be so occupied and employed, that it will produce and support the greatest number of human beings.

The dedication of large territory, to the mere purposes of hunting, is suggested to be a scheme of direct hostility to the performance of this duty. Applied to the arts of agriculture, or the mere

pasturage of domestic animals, a much greater number of individuals can be raised and maintained on the same space of ground, and therefore a nation devoted to the chase ought when required, to surrender its possessions to those who propose to raise grain or feed domestic animals.

Such is the sophistry which has been applied to the title of the Aborigines, and it surely requires little labour to refute it.

1. To subsist upon the product of the chase is forbidden by no revealed law—not a passage can be adduced from holy writ, which prohibits it.

2. A body of men, constituting an independent nation, may appropriate to itself a territory not belonging to others, and make any lawful use of it without being responsible to others for such use. It may exclusively pursue commerce, manufactures, agriculture, or hunting. If the mode of employment is not the best adapted to its own benefit, it will substitute another, but the nation itself must, on such subjects, be the only judge. No other nation has the right to require it to abandon one employment and assume another, and still less to divest it of its territory, in order that it may itself employ it in a better manner.

If the dependence on the chase retards the increase of population, it is an evil which in time will produce its own redress. The natural tendency of the human mind is to pursue its own improvement and attain the greatest possible share of happiness. This impulsive principle has produced all the knowledge, science, and prosperity now in

existence. It operates more slowly or more rapidly according to surrounding circumstances. A severe climate and a forbidding soil may long delay it. A genial sky, a fertile territory, unimpeded by foreign causes, will insensibly lead to meliorations of the mind, to the sweetness of domestic attractions, and to employments less erratic and more productive than hunting. A nation has a legal right to retain the means of such voluntary changes in its own hands. It ought not to be deprived of the chance of future, though perhaps very distant civilization by its own procurement.

Whatever weight there may be in the preference of one mode of employment to another, it is an abuse to apply it to the subversion of national rights. If such rights are to be prostrated, and those who make the best use of the land by the most skilful refinements of art are entitled to possess it, the right of possession would be ever unstable and transient. The people of England and France are probably the best farmers in Europe : in their hands, a given quantity of land will maintain a greater number of people than it would under the management of an equal number of Spaniards or Hungarians. Will it be pretended that the French or the English have, therefore, a right to seize the less productive fields of Spain or Hungary ? Nay, if this principle is established as a rule for the conduct of nations must it not also extend to private life and individual property ? Would not the skilful and industrious farmer be entitled to

drive away one who was less acquainted with the art of agriculture, or who neglected it altogether. The man of wealth throws a large portion of his country estate into pleasure grounds, the anxious farmer in his neighbourhood could produce enough from the same grounds to subsist 100 persons. Was it ever conceived that he had a right to destroy the palings of the park and plough up the lawn of his luxurious neighbour?

As we bring the subject home by familiar example we see its absurdity. And the Indians themselves have adopted the same reasoning.

When the Commissioners of the United States, at the instance of the state of Georgia, even urging the Cherokees to sell the remainder of their lands, they observed to this intelligent nation, that "the Great Father of the Universe must have given the earth equally for the inheritance of his white and red children."

The three chiefs who conducted the correspondence on the other side, modestly replied, "We do not know the intentions of the Supreme Father in this particular, but it is evident that this principle has never been observed or respected by nations or by individuals. If your assertion be a correct idea of his intention, why do the laws of enlightened and civilized nations allow a man to monopolize more land than he can cultivate."*

* See the President's Message of March 30, 1824, with the documents appended, p. 25. 27.

It is the honour of our country, that its practice heretofore has generally, though not without exceptions, been in accordance with the existence of the Indian rights, notwithstanding the manner in which they may make use of the soil.

In taking a short view of the course pursued in the different provinces, it will be perceived, that William Penn did not first set the example of these acts of strict justice, although he closely conformed to the best examples of others.

In Europe he has frequently been applauded for having led the way, but he himself, never claimed this credit, and his other merits are sufficiently great to bear the destitution of this. It is one of the offices of history, and will be one of the leading objects of the present Institution, to combine fidelity of narration with industry of research. Our Pennsylvania pride may be affected by the confession, but it would not be honest to retain in our plume a single feather that is not our own.

Beginning with the northern colony of New Hampshire, (for Maine was only a part of Massachusetts,) I find that so early as 1629, they purchased of the natives what appears to have been considered the entire area of the province, "acquiring thereby," says the respectable Belknap, "a more valuable right, in a moral view, than any European prince could give."*

* Belknap's History of New Hampshire, Vol. I. p. 12. See also p

Of Massachusetts I find it difficult to speak. Two years after this transaction in New Hampshire, "The governor and deputy of the New England committee for a plantation in Massachusetts bay," wrote out from England to the colony in the following terms:

"If any of the *Salvages* pretend a right of inheritance to all, or any part of the lands granted in our patent, we pray you to endeavour to purchase off their title, that we may avoid the least scruple of intrusion."*

It is reasonable to suppose, that if this course had not been previously pursued, it would then have been adopted, but from the following passage in Hutchinson, one of their historians, it does not appear that such purchases, if made, were in all instances fairly conducted.

Hutchinson, when speaking of the famous King Philip, who gave these colonists so much trouble, says, "although his father had at one time or other conveyed to the English all that they were possessed of, yet Philip had sense enough to distinguish between a free, voluntary covenant, and one made under duress."

A conveyance from one of the Indians is, indeed, given by the Historical Society of Massachusetts.†

10, and 128. The deed itself is set forth at full length in Hazard's Historical Collections, Vol. I. p. 272.

* See Hazard, Vol. I. p. 263.

† Collections of the Massachusetts Historical Society, Vol. IV. New Series, p. 266.

It is from a person of the name of Philip, and without a date, for what seems to be a small tract of land. And from the curious account which we have of the dispute between the celebrated Roger Williams and the Plymouth colony, it would appear, that the practice of purchasing was but partially exercised. When he remonstrated against the injustice of depriving the Indians of their lands without a reasonable compensation, they answered as I have before observed, "that God having shortly before their arrival, swept away many thousands of the natives, they had a right to occupy the vacant territory;" to which they added, "that if the natives complained of any *straits* put on them, we gave satisfaction in some payment or other to their content." They also assumed the untenable ground, that an agricultural nation had a right to possess itself of territory employed merely for the purpose of hunting; and when Williams inquired by what right, upon this principle, noblemen, and men of great landed property in England, could justifiably set hunting grounds apart for their own use, their feeble reply was, that in other respects those noblemen and gentlemen rendered great services to the community. Williams was compelled to leave the colony on account of this and other *errors of opinion*. He retired with some adherents to Narraganset Bay, where he commenced a settlement called Providence, and with laudable consistency, and before he broke ground, made a full purchase of the Indians, who were the now ex-

tinguished tribe of the Narragansets, then a powerful nation. This was in 1644.

In Connecticut, it appears that a similar course was in most cases pursued. Before the colony was definitively separated from the Plymouth and Massachusetts government, a tribe of Indians on the river Connecticut invited the latter to form a settlement among them, in order that they might be protected against the warlike Pequots. In 1632, this request was complied with, and about two years afterwards, the Pequots, in a treaty with Lord Sayand Sele, surrendered a portion of their territory to him.

The Pequots were a highminded race: the only nation which, in that part of the world had refused to pay tribute to the Imperial Mohawks; they knew and valued their own rights, they foresaw the ruin that impended on their national existence by the introduction of a superior class of beings, armed with destructive weapons, and eager to use them. The praises due to patriotism and courage, the admiration we bestow upon ancient nations, who hazarded every thing in defence of their rights, their liberties and their soil, should not be withheld from the Pequots. Like the Carthaginians, they have no historians of their own. We take their history, and our impressions of their character, from the pens of their enemies, their oppressors and ultimate destroyers. If we find them soon afterwards engaged in a severe and bloody war with the English, we are not thence to infer, that the Pequots were the aggressors.

In 1635, a small English settlement was made at Windsor, independent of the acquisition of Lord Sayand Sele. The Indians were considered by them as the only rightful proprietors, and the land was purchased from them.

In 1662, Connecticut was erected by the charter of Charles II. into a separate province. John Mason, agent for the colony, is said to have purchased of the Indians, all lands within their bounds, which had not been previously purchased by particular towns; and he publicly surrendered them to the colony in presence of the general assembly.

But in this purchase the remaining territory of the Pequots was probably not included, for before this time the general court of Massachusetts had asserted their title by conquest in a declaration beginning as follows:

“Whereas it has pleased the Lord, in his great mercy, to deliver into our hands our enemies, the Pequots, and their allies, and thereby the lands and places they possessed, are by just right of conquest fallen to us and our friends and associates on the Connecticut river, &c.”*

Independent of this exception, if in point of fact it is an exception, it is gratifying to perceive that Connecticut is to be added to the list of those who

* Hazard's Collections, Vol. I. p. 427. The date is 20th of 9th month, 1637, a remarkable adoption of the peculiar style of a people against whom much severity was about that time practised.

acknowledged and fairly acquired the Indian rights.

Within the province of New Netherlands, afterwards New York, the Dutch unquestionably purchased wherever they formed settlements, and after the final conquest by Nichols, the same policy was cautiously pursued by him and his successors. The purchases of the Dutch extended, as their claims also extended, beyond the present limits of New York. In 1632, they purchased of the natives, lands on both sides of the river Delaware, but to what distance we are not now informed.

In New Jersey this amicable course was steadily pursued. In 1669, Sir George Cartaret is stated to have purchased the Indian rights, but they could not have been all their rights, for new comers were required by the government, either to purchase of the Indians themselves, or if the lands were already purchased, to pay their proportions; the practice of separate purchases was, however, soon found to be productive of mischief, and was forbidden by act of assembly.

We have now arrived at Pennsylvania, where we shall find the way already prepared, in this respect, for William Penn.

The Swedes, who had superseded the Dutch in the occupancy of the western bank of the Delaware, had in 1637, purchased from the natives a tract of land, to which the instructions given by Christina the daughter and successor of Gustavus, to governor

Printz, who came out with the second colony in 1642, refer in the following terms:

“When the Governor shall, God willing, arrive in New Sweden, he must carefully observe that the limits of the country which our subjects possess by virtue of the contract made with the savage inhabitants as legitimate owners of it, according to the deeds, extend from the sea shore at Cape Henlopen, upwards on the west side of Godin’s Bay* and upwards on the Great South River† to Mingo’s Creek, where the fortress Christina is erected, and from thence further along the river to a place called by the wild inhabitants Sankikans,‡ where the boundaries are to be found.”

It is stipulated in the contract that Her Majesty’s subjects may occupy as much of the country as they shall choose.

The original deed is deposited in the national archives at Stockholm.||

* Delaware Bay.

† This name was given to the Delaware River by the Dutch. It appears that the Indians called it Mackerisk Kitton.

‡ Now the falls of Trenton.

|| I have this information from my venerable friend Dr. Collin. See also a curious little book entitled “History of New Sweedland,” reprinted by the New York Historical Society, in which it is stated, that a copy of this deed was read by the Swedes to the Indians at Tincum in the year 1654. Their different emotions are described as the names of those who signed the deeds were pronounced, rejoicing when they heard the names of persons still living, hanging down their heads in sorrow when they were no more.

The Swedes erected several forts, not to defend themselves against the Indians, but against the Dutch. A petty warfare took place between the two nations, and the last capture by Stuyvesant ; that of fort Christina completed the subjugation of the Swedes.

The Dutch rights expired with the conquest of New York, and William Penn by the two grants which he received first from Charles II., and secondly from the Duke of York, became proprietor of what was termed the three lower counties, which now constitute the State of Delaware, and of that great and valuable territory, to which against his own inclination, the name of Pennsylvania was given.

Before his arrival, the policy which he afterwards so strictly pursued, was commenced under his instructions, by Markham his lieutenant governor, with the assistance of commissioners appointed by Penn ; and a small additional purchase was made, or a release of some rights to which the Swedes had not perhaps fully attended, was obtained. This was in July 1682.

The personal arrival of the wise and benevolent founder, was preceded by a letter to the native inhabitants, expressing in plain and affectionate language, the terms on which he desired “to live with them,” and informing them that he had sent commissioners “to treat with them about land and a firm league of peace.” Shortly after he landed, which was on the 24th of October 1682,

we find him commencing this amicable exchange of goods acceptable to the Indians for land, which they were willing to cede.

The first deed is dated June 23d, 1683, and with all the subsequent conveyances as well to the descendants of William Penn as to the State after the declaration of independence, may be seen in Mr. Charles Smith's valuable edition of the laws, to which reference is easy.

Let me here remark that by the faithful observance of this honest policy, Pennsylvania has been exempted from those domestic wars which have afflicted some of her neighbours. In 1756, when Kittaning was destroyed by colonel Armstrong, and during the revolution, when part of our state again became the theatre of war, the Indians were seduced and employed by foreign nations.* Fifty years before the date of our charter, the adventurers under Calvert, after a view of several parts of the country within the chartered limits of Maryland, fixed on a place called Yaoeomoco, of which they made a free and fair purchase from the natives, and where under the name of St. Mary's, they established the seat of government. The same course was afterwards regularly pursued, except during a short interval

* See Kilty's Landholder's Assistant, printed at Baltimore in 1808. Mr. Kilty was register of the land office for the Eastern Shore, and his book contains much useful information.

commencing in the year 1642, when the Indians incited and misled by some of Lord Baltimore's enemies, commenced a war, on the conclusion of which, however, measures so moderate and prudent, were adopted, that the most perfect satisfaction on the part of the natives universally prevailed.

Of the course pursued by Virginia, I should be at a loss, without the information of Mr. Jefferson, to give any certain account. Captain Smith's own narrative, and the histories of Beverley and Stithe, afford little satisfaction in this respect.

In the "Notes upon Virginia," Mr. Jefferson's language is as follows: "That the lands were taken from the natives by conquest is not so general a truth as is supposed. I find in our histories and records repeated proofs of purchase which cover a considerable part of the lower country, and many more would doubtless be found on further search. The upper country we know has been acquired altogether by purchases made in the most unexceptionable form."

In respect to the two Carolinas, their early history presents a fluctuating view of alternate fair dealing, and cruel outrage.

I collect generally from Chalmers,* that the emigrants from the northern settlements to Caro-

† P. 516. But there is no doubt that some part of the lands on the coast were claimed as acquisitions by conquest. Although Williamson says generally that the settlers there purchased of the natives

lina made purchases of the Indians, and their example was probably followed by those who migrated from Europe. Hewitt, who in 1779, published a history of these provinces, describes the early settlers as involved in constant war with the natives. Yet he vaguely alludes to private purchases from them. The first treaty made by the government, denoting any measure of this sort, was in 1721, and in 1750, another was made to the same effect.

An anecdote in relation to Lawson, surveyor general of North Carolina, seems to confirm the fact of some acquisitions having been fairly made. Having ventured himself among a tribe at a distance from the coast, he was siezed and formally put to trial on a charge of having surveyed lands beyond their cessions, condemned and executed. His fellow traveller, a Swiss Baron, who had a large settlement of his countrymen, at or near *New Berne*, was liberated. We may, therefore, suppose that the domains of the latter were within some ceded territory.*

When the spirited and philanthropic Oglethorpe led a colony to Georgia, he began by purchasing of the Indians. But the tranquility of his settlements was much disturbed by the Spaniards, and I am in want of materials to give a satisfactory ac-

* Williamson p. 192. and app. 285. This Lawson had published in London in 1709, an account of a voyage to Carolina, in which he speaks of the Indians with asperity and contempt.

count of their further procedures in respect to the acquisition of Indian rights.

Thus generally was an Indian title recognised by the early colonists from whom we proceeded, and under whom the right on which our property depends, is derived.

The revolution took place; provinces became states, and each state was admitted to be commensurate in boundary with the province. The United States succeeded to the rights of the British crown. Whatever the latter was entitled to, and had not granted away, became the property of the United States.

The lands not yet ceded by the Indians, now became the subjects of amicable purchase, either by the particular state or by the United States, and from the era of our independence, the pretence of acquisition in any other mode or of right on any other principle, is not to be found in the acts of the general government.

Of this rule of proceeding very honourable evidence is afforded in the treaty of 1814, made by General Jackson, with part of the Creek nation. Although these deluded men were wholly defeated, and their country entirely in our possession, so that by the laws of war, the right by conquest was complete, yet the United States, instead of expelling them from their homes, entered into a fair treaty with them, accepted a cession of part of their land, and guaranteed to them the integrity of of all the remainder.

It is not particularly connected with the subject before us, yet it is not improper to add, that the vanquished being reduced to extreme want, the United States with a noble humanity, engaged to provide for them the necessaries of life till the crops of corn became competent to furnish the nation a supply.

Can a similar instance be found in the annals of Europe?

Yet still, although their political rights are thus recognised, the moral condition of those of the natives who are near to our settlements is generally unhappy. The regular advance of the whites, the gradual diminution of their territory, by sales which they feel the necessity of making, the conviction that this corrosive process is in its nature irresistible, produces among the remnants of those tribes, which are still addicted to ancient habits, dejection and despair.

The gentlemen who accompanied Major Long in his second expedition, observe, "that formerly the Indian was sparing in killing game, but at present he considers himself a stranger in the land of his fathers, his property daily exposed to the encroachment of the white men, and therefore, he hunts down indiscriminately, every animal he meets, doubting whether he will be permitted in the ensuing year, to reap the fruits of his foresight during the present."*

* Keatings account of Long's Second Expedition, Vol. I. p. 232.

But it is melancholy to reflect, that relief from these apprehensions is not certainly attained by the Indians adopting other modes of employment; by their becoming civilized and Christians.

One of the southern nations to which I have already alluded, has relinquished its ancient appetite for war, and dependence on the chase, has industriously applied itself to the regular labours of agriculture and the cultivation of the arts; its youth are educated in the Christian religion, and its country exhibits one smiling prospect of cultivated fields, substantial dwellings and prosperous industry, under a government regularly organized, and laws wisely made and actively enforced. Yet even these are now trembling for their own security. Of the employment of actual force they are not apprehensive, but they continue to be constantly and earnestly solicited by the United States, at the instance of a State, which I have already mentioned, to exchange these lands for others that shall be assigned to them beyond the Mississippi.

Some portions of these people seven or eight years ago, assented to our request, and removed to a barbarous neighbourhood, where they have had to experience all the primæval difficulties of savage life, increased by the jealousy and dislike of the old inhabitants. The latter had indeed previously made a cession to our general government, which it was hoped would secure a peaceable reception for the emigrants; but the fierce habits of the Osages and Arkansas, the reduced dimensions of

their territories, and the frequent collision of their hunters, have produced effects that were not foreseen.*

To the ill result of this first experiment, the Cherokees now frequently appeal, and while they humbly and fervently solicit to be permitted to remain in peace and quietness, to enjoy the advantages they derive from their own internal improvements, they inquire, why the United States will still urge them to abandon the blessings which at their suggestion were sought for and acquired.

“When the Indians themselves, (said a Cherokee chief in 1822, in a letter which has been printed *verbatim*, from his own MS.,) seem to manifest a thirst to reach after the blessings and happiness of civilized life, I cannot believe that the United States government will continue the lukewarm system of policy in her relations with the Indians, as has been hitherto adopted, to effect the purpose, of removing nation after nation of them from the lands of their fathers, into the remote wilderness, where their encroachments on the hunting grounds of other tribes has been attended with the unhappy consequences of quarrels, wars, and bloodshed. Has not this been the result of the removal of part of our own nation to the Arkansaw? Yes, the uplifted tomahawk is now wielding, and the scalping knife is unsheathed be-

* See President's Message, March 30th, 1824, p. 57

tween the Arkansaws, Cherokees, and Osages, for the horrid destruction of each other.'''*

These anxious and unhappy men might ask us another question. What security shall we have, they might say, if, in compliance with your entreaties, we surrender the remnant of our lands and remove to a rude country, and a bad neighbourhood; what security shall we have, that if we do not relapse into our ancient barbarism, but continue as we now are, industrious and successful agriculturists, you will not again invade us with your urgent entreaties to cede to you all that we may have a second time reclaimed from nature and improved by art, and to plunge into more distant wildernesses, to suffer more distressing privations and encounter more destructive hostilities.

To such an inquiry it would be in vain to answer that the United States will solemnly guarantee to them the perpetual and undisturbed possession of the new territories, they are sent to enjoy. Alas! they would reply, here, holding up the treaty of *Holston*,† here, is the solemn guarantee of the land we are now seated on, the solemn assurance, that we and our children may consider it

* See the letter at length, at page 399 of Dr. Morse's Report to the Secretary of War. See also the negotiations between the Cherokees and the Commissioners of the United States, communicated to Congress by the President, March 30th, 1824.

† This treaty was made July 2d, 1791. See also the treaty of Tellico, October 2d, 1798.

as our own for ever. On this faith we have struck our ploughs into the ground, and erected houses like your own in our fields, we have copied your manners, have educated our children, and many of us have adopted your religion.

There seem to be no bounds to the expansion of your population. Remove us beyond the Mississippi, in a few years you will surround us ; drive us beyond the mountains to the great western ocean, you will follow us there, and the impossibility of a further flight will be the only limit of our miserable pilgrimages.*

If this is no exaggerated picture, it becomes a matter of grave consideration to ascertain the course which ought to be pursued by us.

We may consider the Cherokees, for of them alone I speak at present, as an independent nation found by us in possession of the soil on which they are now seated. We have seen them relinquish the ancient wild habits of the chase, and adopt the usages of civilized men ; we have led them to the change, we have taught them the arts, supplied them with the materials, and exhorted them to the essay. Towards us, they are peaceable and friendly, to all foreign nations they are now inac-

* The Creeks in 1824, observed, that encroachments are making on their lands, and what assurances (they ask,) have we that similar ones will not be made on us hereafter, if we accept your offer and remove beyond the Mississippi. See report of Secretary of War, February 5th, 1825

cessible : we have, therefore, nothing to fear from them.

Why should we deny to them the full benefit of the unchecked tide of civilization? Why, with boundaries distinctly marked and solemnly guaranteed, should not the white population be content to occupy what the Indians have already given up?

The little spot retained by the Cherokees, is all they desire, and when they send their ambassadors to our government, imploring us to leave them in possession of their own, when we compare the humility of their entreaties with the justice of their claim, we cannot but wish, for the honour of our country, that they may not be heard in vain. It is impossible to conceive that the United States will be less happy or much less powerful if this small fragment is suffered to remain with its rightful owners.

Against such procedures may be set in striking contrast, another and very recent instance of the dignified and benevolent course of the United States, when left to act on their own impulse. Instead of fomenting and encouraging among the nations of the North West, those internal wars which would accelerate their mutual destruction, we have undertaken and succeeded in the arduous task of reconciling them to each other, and five powerful and once exasperated tribes, will remember with gratitude the philanthropic exertions of Governor Clarke, and look with delight on the grave of their war hatchet, the *Prairie des chiens*.

GENTLEMEN,

I have thus briefly submitted to you some general views of the objects of our association.

It is possible that it may hereafter be found expedient to enlarge the classes of particular inquiry.

The manner in which America was originally peopled, may perhaps ever remain a mystery. It has exercised the talents of more persons in Europe than in this country, although one might suppose that we who are on the spot, have better means of information, and stronger motives for inquiry.

It does not fall within the designated functions of the committee last mentioned.

Another committee might be appointed to collect facts not generally known in relation to our conflicts with Great Britain. Time has swept, and daily sweeps away many of the actors, and the memory of many of their acts, but much might still be collected to increase the materials of history.

We have assigned to different committees the medical, the juridical, and the literary history of Pennsylvania. One of the beautiful features of our constitution has always been the equality of religious opinions. Its theological history would evince, whether this has been an illusive theory, or whether it has been carried into practical and beneficial effect. And if a comprehensive and judicious view was exhibited of its features and results, it might afford a salutary lesson to those foreign powers, that still in a greater or less degree, uphold and

enforce the right of man to interfere between the creature and the great Creator.

This association is not confined to one sex. Those to whom society is in every respect so much indebted, who confer on life its finest felicities, and who soften and allay the bitterness of adversity; whose attainments in science are only less frequent because they are habituated to content themselves within the sphere of domestic duties, but who have so often shown, that occasion alone is wanting for advances to the highest rank of mental improvement, *they* are not excluded.

On this side of the Atlantic, we have fewer evidences of female literature than in Europe. But there can be no pretence for supposing an inferiority of intellect. We must, therefore, account for it from a difference of manners. The simplicity of early colozination has not yet been wholly worn out. The wife, the daughter, or the sister, have still been contemplated, like the *Lares* of ancient mythology, as only the guardians and the ornaments of a sacred home. But without abridging these endearing characters, the wife, the daughter and the sister, may be admitted and encouraged to cultivate many branches of literature; to partake in the highest employments of mind, and often to assist, and sometimes to lead in the pursuit and progress of the most exalted science.

In relation to the subjects embraced by this association, the co-operation of the female sex seems particularly desirable. Generally superior to man

in closeness of attention, and retentiveness of memory, many of them are living records—sources of knowledge which inquiry will seldom exhaust.

In conclusion, I have only to express an ardent hope, that this society will not, like too many others, be marked only by vivacity of inception, apathy of progress, and prematureness of decay.

In the variety of its objects, something may be found to interest every one.

The treasury of literature is grateful for the widow's mite. Let all contribute what they can, and they will contribute what they ought: let no opportunity be lost for throwing into the common stock, not only what may be collected of times that are past, but whatever may be of interest in relation to time that is present.

ADDITIONAL NOTES.

Note, page 59. Neither William Penn nor Robert Barclay, were educated at Seminaries established by the Society. They both became converts at mature age. Barclay, with paternal concurrence. Penn, greatly to the displeasure of his father. The observations in the text are, therefore, to be understood as applying to the reception which works of this character meet among the Friends, and not to the sources whence the literary knowledge was derived.

Note, page 47. The lines between brackets are from a communication made to me by one of the members of the Committee.

Note, page 69. My respectable friend Judge Lyman of Providence, who happened to be present at the delivery of this discourse, has favoured me with the following note, which shows that before the banishment of Roger Williams. some of the inhabitants of Ply-

mouth colony had, like himself—sound impressions of the Indian rights.

The island afterwards called “Rhode Island was purchased of the Indian Chief Miantonomo in the year 1639—40, by a number of gentlemen from Boston of great respectability. They divided it among themselves and formed their first settlement on the northern part. After a few years they removed and settled at Newport, which has been the capital of the state ever since.”

A
MEMOIR
ON THE
LOCALITY OF THE GREAT TREATY
BETWEEN
WILLIAM PENN,
AND THE
INDIAN NATIVES
IN 1682.

*Read before the Historical Society of Pennsylvania,
September 19th, 1825.*

BY ROBERTS VAUX.

MEMOIR, &c.

No transaction connected with the settlement of Pennsylvania, has higher claims upon the respect of those who are interested in her early annals, than the first treaty which was concluded between the pacific founder, and the Indian natives, in 1682. That compact was not more distinguished for its justice and generosity, than for the fidelity with which it was observed by the contracting parties, and their descendants, for upwards of half a century after its ratification.

The negotiation itself, in all its features, has no parallel in history. A few defenceless men holding council in the midst of the wilderness, with chiefs and warriors, and assembled tribes of aborigines, whose numbers and dispositions could not have been known, was surely a novel experiment. Yet such was the purity of their character, and the magnanimous quality of their aims, that the naturally untamed and misgiving tempers of the sons of the forest were checked and meliorated in the presence of Penn, and his companions, and the negotiation was conducted on the part of the natives in

a spirit of candour, and gentleness, which might be advantageously followed in the diplomatic discussions of more polished nations.

This primitive act, on the part of the lawgiver of Pennsylvania, has received the warmest applause of the wise and good, and the poet and the painter have employed their genius in celebrating it in the charms of verse, and by the graphic, and glowing illustrations of the pencil. The precise spot where this deed of concord was sealed, cannot fail to be an object of deep interest to the present, and for all succeeding generations. Tradition tells us, that the treaty of 1682, was held at Shackamaxon, under the wide spread branches of the great Elm tree which grew near the margin of the Delaware, and which was prostrated during a storm in the year 1810. Some doubts, however, have been recently suggested, which are calculated to unsettle the long received opinion, that Kensington was the scene of the memorable negotiation, and as the only mark by which the locality was designated is removed, it is probable that the lapse of time, with other concurring circumstances, may hereafter render the fact equivocal, and perhaps, cast over it the veil of oblivion, should the evidence which remains, pass away uncollected, and unrecorded.

Those who have speculated upon this matter allege, that the treaty took place at *Upland* or *Chester*, the interesting theatre where the "*Great Law*," was given, and where the first assembly of the representatives of the freemen of Pennsylvania

convened soon after the arrival of the founder in 1682. I have sought in vain for proof to sustain this position, and if testimony were wanting to establish the place of the treaty to have been at Shackamaxon, the probabilities are all against Upland.

The Swedes had been in possession of the country upon the Delaware, and many settlements were formed, from the bay to some distance northwardly of Tinicum Island, several years before the grant of Charles II. to William Penn, and although those worthy people generally maintained a good understanding with the natives, they nevertheless deemed it proper to adopt warlike modes of defence against any surprise, or descent upon their habitations. Block houses, and other means of resistance were, therefore, established at various points on the territory occupied by the Swedes, and *Upland* was within the fortified limits. For the convenience of the European inhabitants, who were to become the subjects of his government, and whom Penn found on the soil when he arrived, was no doubt the reason why Upland was adopted as the temporary capital of the province, but no one who is familiar with the character, and purposes of the benevolent ruler, will suspect his discernment, or question the consistency of his pacific principles, by supposing, that he would have asked the natives to treat with him at a place which was *protected by military posts!*

The following letters, whilst they go to confirm

the opinion that Chester was not the treaty ground, also support the tradition concerning its having been at Shackamaxon. They are likewise highly interesting and valuable on account of the historical information, which is incidentally communicated by their venerable authors.

MY RESPECTED FRIEND,

After asking thy excuse for so long delaying to answer thy letter of the 5th inst. and which was partly occasioned by my desire to furnish thee from the papers in our possession, with some evidence that the original treaty was held at Shackamaxon, under the shade of the venerated Elm, which I have no doubt was really the case, notwithstanding that I have not been able to find the casual mention of the circumstance in our papers, for it would probably have only been casual, James Logan not attending the Proprietor until his second voyage hither. The family of Penn in England could, I should suppose, furnish proof of the place where this transaction so honourable to their illustrious ancestor was held, together with many other particulars highly gratifying to those who delight to look back upon the infancy of our state,—for I have no doubt but that they possess a very great mass of information on every subject connected with the establishment of the colony.

I never could account for the propensity of some to unsettle every received opinion, either on subjects which though speculative are of the

highest importance to the comfort as well as to the well-being of every individual and to society, or on those minor topicks, which like the present instance have afforded so much innocent satisfaction in consecrating, as it were, a local spot, sacred to the recollection of the dignity of moral virtue. But in the present instance I believe they have nothing on which to found their opinion, that the first treaty was held at Chester : My honoured mother was born near to that town and passed the first part of her life there, was well acquainted with its oldest inhabitants, some of whom had been contemporaries of William Penn, and I may add, was well qualified from her inquiring mind and excellent memory to have known such a tradition, had it existed ; which she would have treasured up and often mentioned, with that of the proprietor's residence at Robert Wade's during his first visit. The dwelling which was thus honoured was called 'Essex House,' and stood on the other side of Chester Creek, its very ruins have long disappeared, only two or three Pine trees mark the spot, and I have formerly seen a ball and vane which had belonged to the old building and had been preserved by some of the descendants of Robert Wade, who (I have heard) were enjoined by the will of some of the family to do so, in a hope of the mansion's being rebuilt, when they were to be again replaced on its turret.

I hope my kind friend, thee will excuse the irrelativeness of the above to thy question respect-

ing the scene of the treaty, which had it been at Upland, (now Chester) I think there is no doubt but it would have furnished an article in the Swedish records. We were once in possession of a book of the records of the courts held under their government prior to the arrival of William Penn, which, (if I remember aright) my dear Dr. Logan gave into the hands of the late Samuel White, Esq. of Delaware, to place in the archives of that state.

I am with great respect,
thy affectionate friend,

D. LOGAN.

Stenton, 29th 5th mo. 1825.

Roberts Vaux, Esq.

Philadelphia, 19th May, 1825.

DEAR SIR,

The Swedish writings mention the treaty of Penn with the Indians, and their great respect for him; but nothing as to the locality. Circumstances make it highly probable that it was held at (now) Philadelphia, as being pretty far into the country, and, by its site, destined for a capital. The first Assembly being held at Chester is not an argument for its having been there, because Indian concerns could not have been objects previous to many inquires about them.

If a monument is to be erected, Philadelphia is, undoubtedly, the proper place.

Your respectful servant
and friend,

NICHOL. COLLIN.

Roberts Vaux, Esq.

Belmont, September 6th, 1825.

MY DEAR SIR,

At your request, but with much diffidence as to the subject you mentioned, to wit :—the place of holding the first grand treaty with the Indians by William Penn ; I can only say, that from early youth to this day, I have always understood and believe, that the treaty in 1682 was held at Shackamaxon, now Kensington. When a boy, I have resorted to the great Elm tree opposite the house in which President Palmer resided, in *olden* times ; and have always confided in the then uncontradicted tradition, that under that tree the treaty was held. The place had been an Indian village ; but one less in importance than a settlement opposite thereto, at now Cooper's point, in New Jersey ; where a very large village or town had been. Indian graves, arrows, stone axes, ornamental trinkets, cooking vessels, and every indication of Indian residence, were found on both sides of the Delaware ; but on the eastern side, in the greatest plenty. I never heard at that time of day, nor since, that the fact was disputed, until you now inform me that doubts exist on the subject.

I can only relate my early impressions ; which were those of my cotemporaries. I had the most authentic opportunities of knowing Indian history, and the transactions between the proprietaries of Pennsylvania with the Indians ; my uncle, Richard Peters, having been during, I believe, thirty-five or forty years, the secretary of the province, and the confidential agent of the proprietaries. I was much acquainted with his official duties ; and had access to the office papers. He had the chief concern in the Indian department, and I have no doubt but that I could have put any question relative to treaties, or other Indian affairs, at rest, in my early life. But now I can only recall past impressions ; and those, as to the point in question, have uniformly been as I have stated.

William Penn was one of uncommon forecast and prudence in temporal concerns. You will see in his Biography, page 121, Vol. I. that he had the precaution in the 8th month, 1681, (in the fall of which year he arrived in the Delaware,) to write from London, a most friendly and impressive letter to the Indians ; calculated to prepare the way for his arrival among them in his province. No doubt, and I think I remember the early impression I had, that he pursued such cautionary measures on his first coming into Pennsylvania. You will see in the same book, in Vol. II.* that he gives a

* Penn's Works, in 2 Vols. printed in 1726.

minute account to his friends in England, of the Indians in 1683 ; and says that he had made himself master of their language ; so as not to need an interpreter. This shows a familiar and frequent intercourse with them. I was pleased, in the same letter, to see that our wise predecessors used *oxen*, and not horses in their ploughs. I wish the present race of farmers were equally and generally as wise and economical. The crops were then more abundant than in our days. From one bushel of barley sown, they reaped forty, often fifty—and sometimes sixty. Three pecks of wheat sowed an acre. All this is, to the point in hand, but in favourite interlude. He gives also an account of the native *grapes*, which he eulogizes ; and announces his intention to establish a vineyard. Peaches were in great plenty among the natives ; and very good.

He gives an account of the Dutch and Swedish settlers, between whom there was much jealousy. It is well known that both of these settlers established forts, for their defence against the natives, and probably to overawe each other. The Dutch deemed the Swedes and Finns, intruders. The first inhabited the lands on the bay ; and the Swedes “the freshes of the river Delaware,” as high as Wicacoa, within half a mile of Philadelphia.

It appears that the seat of his government was first established at *Upland*, or Chester ; where several of his letters are dated. Now I have always

understood that *Talks* with the Indians, preparatory to a final arrangement by a conclusive treaty, were held at *Upland* or Chester. But it is almost indisputably probable, if general tradition did not confirm the fact, that William Penn chose to hold this treaty beyond the reach of any jealousy about the neighbourhood of fortified places, and within the lines of his province, far from such places; and at a spot which had been an Indian settlement, familiar to, and esteemed by, the natives; and where neither Swedes nor Dutch could be supposed to have influence; for with them the Indians had bickerings. This view of the subject gives the strongest confirmation to the tradition of the treaty being held at Kensington; and the *tree*, so much hallowed, afforded its shade to the parties in that important transaction. The prudent and necessary conferences or talks, preparatory to the treaty; if any vestiges of them now remain, may have given the idea that the treaty was held at Upland.

The name and character of *William Penn*, denominated by the Indians *Onas*, was held in veneration, through a long period, by those who had opportunities of knowing the integrity of his dealings and intercourse, especially by the *Six nations*, who considered themselves the masters of all the nations and tribes with whom he had dealings in his time, and his successors thereafter who adhered to the policy and justice practised by him. At Fort *Stanwix*, fifty seven years ago, I was pre-

sent when the *Delawares* and *Shawanese*, were released by the Iroquois or *Six* nations, (originally *five*,) from the subordination in which they had been held from the time of their having been conquered. The ceremony was called "*taking off the petticoat*," and was a curious spectacle. When I was adopted into the family of a *Tuscarora* chief, at the time of the treaty of Fort *Stanwix*, he made to me a speech, in the style used on such occasions; in which he assured me of his affection; and added, that he was pleased with my being "*one of the young people of the country of the much respected and highly esteemed Onas*," which means a *quill* or *pen*. He gave to me one of his names—*Tegochtias*. He had been a celebrated warrior, and had distinguished himself on expeditions, toilsome and dangerous, against the Southern Indians. The feathers, and desicated or preserved birds, called by the Indians *Tegochtias*, i. e. *Paroquets*, were brought home by the war parties, as *Trophies*. The feathers decorated the *Moccasins* (whereof I had a pair presented to me,) mixed with porcupine's quills in beautifully ornamented workmanship. If there be any thing in my Indian name of *Paroquet*, ludicrous in our estimation, I shall not be ashamed of it, when the great and good Penn, was denominated, not a whole bird, but merely a *quill*. My *moccasins* cost me an expensive return, in a present the ceremony required; but I considered the singular honour conferred on me, richly deserving remuneration.

neration ; though, in fact, I was more diverted than proud in the enjoyment of the amusing and curious scene, and had no doubt but that this expected remuneration was an ingredient in the motive leading to my adoption. *My* nation is reduced, as is all that confederacy to a mere squad ; if not entirely annihilated ; though at that time it, (the confederacy,) could bring 3000 warriors into the field. One race of men seems destined to extinguish another ; and, if so, the whites have amply fulfilled *their* destiny. I wish, however, that the present treaty makers had the bust of William Penn, made from the *elm tree*, with a scroll superscribed “*Penn’s exemplary Treaty,*” constantly before their eyes. It would be as monitory on this part of their duty, as the portrait of *Washington* is exciting in all others. The remaining aborigines of our country are doomed, sooner or later, to the like extinction their departed predecessors have experienced. If, in any instance, they seem to be stationary ; begin to establish farms, and exercise civilized occupations ; they must be removed, (to accommodate an intruding white population,) to the wilderness ; and recover their former habits. But I see *William Penn* adopts the idea, that they are of *Jewish* origin. And, if they are of Israelitish descent, it is in the decrees of providence, that, like all other *Jews*, they must be homeless wanderers ; dispersed throughout all the regions of the earth. *Even now*, in our day, a portion of these copper colour-

ed *Ishmaelites*, if so they be, are to be compelled to wander far away, and leave their cultivated homes, to satisfy the sordid cupidity of speculating land jobbers. But if their fate be, in the immutable decrees of heaven, so determined; unworthy executioners often consummate judgments.

very sincerely yours,

RICHARD PETERS.

Roberts Vaux, Esq.

Belmont, November 3, 1825.

MY DEAR SIR,

I met my old friend David H. Conyngham, a day or two ago. We fell into conversation on olden times, and, among other reminiscences, the *Elm Tree* at Kensington was discussed. Both of us remembered our boyish amusements, and among them, our bathing at the three stores, and on a sandy beach near the famous *Elm*. It stood then majestically on a high and clean bank, with a fine area around it; but, in a later period, the bank has been washed away. His recollections and mine (earlier than his by a few years,) go back between sixty and seventy years. No person then disputed the fact, that this *Elm* was the tree under which *Penn's* treaty was held. But Mr. Conyngham remembers, distinctly, the frequent visitations of *Benjamin Lay*,* to the scene of our sports. He was, as you

* *Benjamin Lay* came to Pennsylvania in 1731, at the age of 54 years, less than fifty years after *Penn's* treaty in 1682, and was no

know, eccentric and singular; but not deficient in understanding and *chronicling* all remarkable events. He must have known some of the contemporaries of *William Penn*. After dilating on the worth and virtues of that good man, and particularly as they applied to his treatment of the natives; he would call on the boys; point to the Elm tree; and enjoin on them to bear in mind, and tell it to their children, that under that tree Penn's treaty was held; and they should respect it accordingly.

Yours very sincerely,
 RICHARD PETERS.

Roberts Vaux, Esq.

It only remains for me to exhibit, what I consider to be satisfactory proof for confirming the generally admitted tradition, that Shackamaxon was the scene of the distinguished transaction under notice.

In Proud's History of Pennsylvania, Vol. 1. p. 211, it is said, "*The Proprietary* being now returned from Maryland to *Coaquannock*,* the place so called by the Indians, where Philadelphia now stands, began to purchase lands of the natives,

doubt, personally acquainted with individuals who knew the fact of the locality of that transaction. Lay's benevolent character and pursuits were such, as to render the *tree*, and the interesting event connected with it, peculiarly gratifying to him, and as it was his constant practice to cultivate and cherish in the minds of young persons, a love of truth, of justice, and of good will to men, by familiar and forcible illustrations, I place great confidence in the accuracy of his knowledge in this respect.

R. V.

* "The Grove of the tall Pine Trees."—Duponceau.

whom he treated with great justice and kindness." At page 212 of the same author and volume, we also read—"It was at this time (1682) when William Penn *first entered personally* into that lasting friendship with the Indians, which ever after continued between them."

Clarkson, the biographer of Penn, at page 264, vol. 1. Philadelphia edition, gives some account of the treaty of 1682, and says—"It appears, that though the parties were to assemble at Coaquanock, the treaty was made a little higher up, at Shackamaxon." The probable cause for this change of the place of meeting with the Indians, was their own convenience, as well as that of the proprietor, and those who attended him, as a settlement had been long before made at Shackamaxon, by the natives, and by some Europeans,* three or

* They were from West New Jersey, to which Province many of the Society of Friends emigrated from Great Britain in 1677. William Penn was one of the proprietors, and Robert Barclay, the apologist, was Governor of that colony. Meetings for religious worship and for conducting the affairs of the Society of Friends in that vicinity, were held at the house of Thomas Fairland, at Shackamaxon in 1681. William Penn was the chief instrument in settling West New Jersey, and the form of government originally prepared for it was the product of his highly gifted mind. The instructions given to the eight commissioners sent to lay the foundation of the settlement, expressly direct the *purchase of lands from the Indians*, so that this great principle of justice, was avowed by Penn several years before his treaty of 1682.

That Shackamaxon was an ancient Indian town, and early known to this description of European emigrants, who ascended the Delaware, is I think well established. *John Kinsey*, one of the commissioners

four years, before the arrival of Penn in the province. The question may however be put at rest by the following facts. Our celebrated countryman, the late Benjamin West, executed in 1775, an historical picture of the Treaty of 1682, which he inscribed to the Proprietors of Pennsylvania. The original painting is in the possession of John Penn, Esq. One of the five dignified individuals, who were present with the proprietor at that Treaty, was the Grandfather of West, and the painter has given a likeness of his ancestor, in the imposing group of Patriarchs. I hold this circumstance to be of great authority, because West had an opportunity of being intimately acquainted with all the particulars of the treaty, and it will not be questioned that he intended to perpetuate a faithful narrative upon his canvass.

After the tree was uprooted by the storm in 1810, the trunk measured twenty-four feet in circumference, and its age was ascertained to be *two hundred and eighty three years*, having been *one hundred and fifty five years* old at the time of the Treaty. A large piece of it was sent by our venerable townsman, Samuel Coates to John Penn of Stoke Park, in England, which he so highly valued as to cause it to be placed on a pedestal in one of the

sent to organize the affairs of West New Jersey, died at *Shackamaxon*, in 1677, soon after his landing.

apartments of his mansion, with the following inscription engraved on a brazen tablet:

“ A remnant of the great Elm, under which the Treaty was held between William Penn and the Indians, soon after his landing in America, A. D. 1682, and which grew at Kensington, near Philadelphia, till the autumn of the year 1810, when it fell during a storm, was presented to his grandson, John Penn, Esq. Mr. West, who has introduced this Tree into his celebrated picture, representing the Treaty, has mentioned a peculiar mark of respect shown to it, in more recent times, in the following words :

“ ‘ *This Tree, which was held in the highest veneration by the original inhabitants of my native country, by the first settlers, and by their descendants, and to which I well remember about the year 1755, when a boy, often resorting with my school-fellows, [the spot being the favourite one for assembling in the hours of leisure,] was in some danger during the American War of 1775, when the British possessed the country, from parties sent out in search of wood for firing ; but the late general Simcoe, who had the command of the district where it grew, from a regard for the character of William Penn, and the interest which he took in the history connected with the tree, ordered a guard of British soldiers to protect it from the axe. This circumstance the general related to me in answer to my inquiries concerning it, after his return to England.* ’ ”

If the society concurs in opinion with me, that the evidence produced is satisfactory, I would suggest that measures be put in train for erecting a plain and substantial *Obelisk of granite*, near where the tree formerly stood at Kensington, with appropriate inscriptions.

NOTES

ON THE

PROVINCIAL LITERATURE

OF

PENNSYLVANIA,

BY

THOMAS I. WHARTON, Esq.

Read at a Meeting of the Council, September 21st, 1825

NOTES, &c.

The first settlers of Pennsylvania were, chiefly, members of a religious society, which has been supposed to decry and undervalue human learning, and to place literature as well as painting and music on its *index expurgatorius*. However truly this may have been said of some of the early teachers of that sect, certainly the colonial history of Pennsylvania affords no materials for the support of the theory. It is believed that no one of the states of this union can exhibit so early, so continued, and so successful a cultivation of letters as Pennsylvania. Hardly had the emigrants sheltered themselves in their huts,—the forest trees were still standing at their doors, when they established schools and a printing press, to teach and to be enlightened: literally *inter silvas querere verum*. Within four years from the time that our ancestors landed in the wilderness, a printing press was at work in Philadelphia, sowing broadcast the seeds of knowledge and morality: and only a few months after the arrival of William Penn public education was attainable at a small expense.

It appears, from the journals of the provincial council, that in December 1683, Enoch Flower undertook to teach school "in the town," (as it was then called,) "of Philadelphia." His charges, a record of which is still preserved, indicate the simplicity of the period. "To learn to read English, four shillings a quarter ; to write, six shillings," &c., "boarding a scholar, to wit, diet, lodging, washing, and schooling, 10 pounds for the whole year,"* little more than what is now paid for a single quarters "schooling," alone, in some of our institutions.

Six years afterwards a public school, or as it would now be called a seminary or college, was founded by the Society of Friends in this city. The preamble of the charter granted in 1701, proves how deeply the true principles of morals and philosophy were anchored in the minds of the founders and rulers of Pennsylvania. "Whereas," it recites, "the prosperity and welfare of any people depend in a great measure upon the good education of their youth, &c., and qualifying them to serve their country and themselves by breeding them in reading, writing, and learning of languages, and useful arts, and sciences, suitable to their sex, age, and degree ; which cannot be effected in any manner so well as by erecting *public schools* for the purpose aforesaid," &c. Proud,†

* Proud's History of Pennsylvania, Vol. I. p. 345

† Vol. I. p. 344.

says that the poor were taught *gratis* in this institution. It is curious and instructive to compare the doctrines of this instrument with those which had been promulgated thirty years before, and were at that time acted upon, in a neighbouring province. "I thank God," said the Governor of *Virginia*, "We have not free schools nor printing; and I hope we shall not have these hundred years. For learning has brought disobedience and heresy and sects into the world; and printing has divulged them libels upon the government. God keep us from both."*

The first preceptor in the Friend's public school was George Keith, afterwards sufficiently famous. His income from this office seems to me considerable for the times. He was allowed a salary of £50 per annum, with a house for his family, a school-house, and the profits of the school besides for one year. For two years more his school was to be made worth £120 per annum. One year, however, appears to have been quite enough for the restless spirit of George Keith. He was succeeded at the expiration of that time by Thomas Makin, who was at one period clerk to the provincial assembly, and whose *Descriptio Pennsylvaniae*, written in 1729, in Latin hexameters, was probably the first attempt to describe the institutions and scenery of the province in the lofty language of Rome. The verse is uncouth enough, and if the

* Chalmers, Vol. II p. 328

following notice of the Friend's school be not a sufficient specimen, the rest may be found in Proud's History.

“Hic in gymnasiis linguæ docentur et artes
Ingenuæ; multis doctor et ipse fui.
Una schola hîc alias etiam supereminet omnes,
Romano et Græco quæ docet ore loqui.”

Makin, also, according to Proud,* wrote an “*Encomium Pennsylvaniæ*,” another Latin poem, in 1728, which, with the *Descriptio Pennsylvaniæ*, was found among the papers of James Logan, in MS. many years after his death. These poems are, probably, still among the Logan papers, and if so, they may, perhaps, be procured for the collection of our Society.

Printing, (which the Governor of Virginia had likewise deprecated with so much holy horror,) was introduced into Pennsylvania so early as 1686. It is worthy of remark and remembrance, that this province was, comparatively speaking, far earlier than her sister colonies in the use of the press, and consequently, in the general dissemination of literature. I have already stated, that a printing press was in operation in Philadelphia only *four* years after the landing of William Penn. In Massachusetts, where learning and the arts have been cultivated with great success, printing was not introduced until *eighteen* years after its settlement. In New York, not until *seventy-three*

* Vol. II. p. 360.

years after the settlement; and in the other colonies, not for a much longer period.

The first printer who settled in Pennsylvania, was William Bradford, a native of Leicester, in England, and a member of the Society of Friends, who emigrated in 1682 or 3, and landed on the spot where Philadelphia was soon afterwards laid out, before a house was built. It is believed that he set up his first printing press at Kensington, in the neighbourhood of the treaty tree. His earliest publication was an almanac, of which, as it is the most ancient book printed in Pennsylvania, the title page may be worth copying.

“An Almanac for the year of the Christian account 1687, particularly respecting the Meridian and Latitude of Burlington, but may indifferently serve all places adjacent. By Daniel Leeds, Student in Agriculture. Printed and sold by William Bradford, near Philadelphia, in Pennsylvania, Pro Anno, 1687.”

Of this first Pennsylvanian author, Daniel Leeds, I find little on record. He appears to have espoused the principles and partaken of the fate of his publisher, Bradford, and he left the province a few years afterwards, carrying with him no very amicable feelings towards the Society of Friends, as the following title page may testify: “A Trumpet sounded out of the Wilderness, of America; which may serve as a Warning to the Government and people of England, to beware of *Quakerism*; wherein is shown how in *Pennsylvania*, and there

away, where they have the government in their own hands, they hire and encourage men to fight ; and how they persecute, fine and imprison, and take away goods for conscience sake : by Daniel Leeds. Printed by William Bradford, at the Bible, in New York, 1699."

Bradford's residence in Philadelphia was short. He engaged zealously in the Keithian controversy, unfortunately for him took the side of the minority, became obnoxious, and removed to New York in 1693, where he died in 1752, at the advanced age of 94.

Religious controversy gave the first impulse to Literature in Pennsylvania. It is a fit subject for a patriotic pride, that a drop of blood has never been shed in this state in a religious quarrel : but it nevertheless true that the usual quantity of paper and ink has been consumed on this fruitful subject ; and from the dissensions of 1691, down to the Catholic controversy of 1823, pretty much the same sort of temper has been exhibited. The disorder broke out in the very infancy of our history. George Keith, who has already been spoken of as head master in the Friends' public school, had no sooner been installed in the office of mending the grammar of the boys, than he set about correcting the religion of their parents. He maintained with great earnestness, that the 'Friends' now that they had reached the elevation of power, and got into the administration of affairs, were, like most political aspirants, disposed to turn their backs upon

the ladder by which they had mounted, and had adopted many of the practices against which they had so vehemently declaimed; and he was for recalling them to what he either did, or affected to, consider the true and ancient doctrine. He accused the principal functionaries of the society of spiritual lukewarmness, and denounced the magistrates, (at that time principally ‘Friends,’) for executing the judgments of the law upon malefactors, holding it to be inconsistent with the genuine faith for a believer to draw the sword, even though it be the sword of justice. In a word, he was to use the language of the present days—an *ultra*. In 1689, previous to his quarrel with the leaders of the Friends, this active pamphleteer appears to have published a tract against the New England churches, which is said by *Thomas*, in his *History of Printing*,* to have been the first *book* printed in Pennsylvania. In 1690, he entered the lists with Cotton Mather, and published two more pamphlets in vindication of the Quakers. The next year saw the commencement of the *internal* controversy. Keith, who was a public preacher, had given offence by his *heterodox* tenets, (at least so they were called by the elders,) and as they alleged, by his turbulent and overbearing spirit; and he was accordingly disowned, and denied the privilege of speaking in the meetings of wor-

* Vol. II. p. 9, 10. A copy of it is in the possession of Thomas.

ship. Thus debarred from giving vent to his opinions, through the accustomed channel, he sought that universal refuge, the press, from which soon appeared several pamphlets, reflecting in no gentle tone upon his adversaries. A prosecution ensued, of which the issue is somewhat differently narrated. Proud says,* that the printers of these “virulent pieces,” William Bradford and John M^cComb, were arrested by warrant from five magistrates, and upon their refusal to give security for their appearance, to answer for the publication, were “nominally” only (he says) committed, never being in confinement, and were soon discharged, without having been brought to trial. On the other hand, it appears, from a pamphlet published at the time, and from which Thomas† has given copious though not altogether satisfactory extracts, that they were actually tried, after having been a considerable time in confinement.‡ The jury, it seems, were discharged, having been unable to agree, notwithstanding a pretty decided charge from the court, who, if we may believe the author of the pamphlet, treated the prisoners with great harshness. They were not tried again owing to a singular circumstance. It seems that the principal evidence against Bradford was his own set of types; the frame containing which, duly composed for printing the seditious pamphlet, was brought into court,

* Vol. 1 p. 372

† History of Printing, Vol. II. p. 13. &c.

‡ See note A

a very potent though dumb witness against him. When the jury retired they took this frame out with them, and not being acquainted with reading backwards, reading forward being a considerable affair in early times, one of them attempted to place it in a perpendicular and more convenient situation, and, in so doing, the types fell from the frame, and so vanished the testimony for the prosecution. Bradford after being released from confinement, went to New York, where, as has been already mentioned, he died.

Keith's subsequent history is curious and amusing. He drew off with him, at first, a large number of "Friends," some of them of considerable account in the society, and persons of rank and property. They called themselves "Christian Quakers;" and if their leader had possessed a decent command of temper, and consistency of purpose, he might have made a serious inroad on the principal society. He appears however to have left the province soon after the proceedings against him; and little more was heard of him until the year 1702, when he re-appeared upon the boards in the new character of a minister of the Church of England, and missionary of the society for the propagation of the gospel. In this capacity he maintained the doctrines of his new faith, with a zeal and fervour little short of what he had exhibited in defence of the primitive tenets of George Fox, vehemently assailed the opinions of the Friends on the subject of baptism, and the communion, and stout-

ly maintained the divine right to tithes, and the necessity and excellence of an hierarchy. On his return home to England, he published the result of his travels as missionary, which extended from New Hampshire to North Carolina. The book (a small quarto volume,) is entitled "A Journal of Travels from New Hampshire to Caratuck, on the Continent of North America, by George Keith, A. M. late Missionary from the Society for the propagation of the Gospel in foreign parts; and now rector of Edburton, in Sussex." London, 1706. It is in the city library, and is worth preservation, as displaying the character of the man, and something of the manner of the times. He appears to have been in earnest in his new calling, riding from one end of the continent to the other in quest of antagonists, arguing with Independents, Anabaptists, Unitarians, Quakers and Catholics, each in their turn, and giving no quarter to either, loving nothing so much as the hot water of theology, and labouring to prove the sincerity of his conversion, by the breadth of his tenets. Unfortunately for his love of notoriety and distinction he met with no further persecution; and the *ex ultra*, or "Christian Quaker," now "Rector of Edburton, in Sussex," was suffered to return to England without molestation, either from Cotton Mather or Pennsylvanian justices.

Although it is the object of these sketches to notice only the literary works of Pennsylvanians, pub-

lished in Pennsylvania; yet it seems not entirely irrelative to the subject to revive the recollection of books relating to the province, though published elsewhere. In 1698, was printed in London, an amusing little volume, entitled,

“An Historical and Geographical Account of the Province and Country of Pensilvania, and of West New Jersey, in America, &c. With a Map of both Countries. By Gabriel Thomas, who resided there about fifteen years.”

The author informs us that he came over to the province in the first ship bound from England here, since it received the name of Pennsylvania, which was in 1681, and “saw the first cellar where it was digging for the use of our Governor William Penn.” His descriptions are certainly very flattering to the existing state of the colony. He paints every thing *couleur de rose*, and if his book had general circulation in England, it must have tended to produce an extensive emigration to the Utopian colony. “Philadelphia,” he says, “contains above 2000 houses, all inhabited, and most of them stately and of brick, generally three stories high, after the mode in London, and as many several families in each.” He tells us of “Frankford river, near which Arthur Cook hath a most stately brick house;” of “Neshaminy river, where Judge Growdon hath a very noble and fine house, very pleasantly situated, and likewise a famous orchard, wherein are contained above 1000 apple trees;” of “governor Penn’s great and stately

pile, which he has called Pennsbury House, covered with *Tilestone*," (I suppose slate); of "Robert Turner's great and famous house," in the city; and of "Edward Shippey," (probably *Shippen*), "who lives near the capital city, and has an orchard and gardens adjoining to his great house, that *equalizes* (if not exceeds) any I have ever seen." If we are to believe these passages, the young colony had attained no mean height in luxury. Of the women of our native state, he says "they are usually married before they are 20 years of age; and when once in that *noose*, are for the most part a little uneasy, and make their husbands so too, till they procure them a maid servant to bear the burden of the work, as also in some measure to wait on them too." And afterwards he says, "jealousy among men is very rare, and barrenness among women hardly to be heard of."

The most favourable consequences ensued (according to our worthy author,) from these happy nuptials. "The children born here," he says, "are generally well favoured and beautiful: I never knew any one come into the world with the least blemish on any part of the body, being in the general observed, to be better natured, milder, and more tender hearted than those born in England." What are called the liberal professions, I am sorry to say, found little favour in the eyes of honest Gabriel: "of lawyers and physicians I shall say nothing, because the country is very peaceable and healthy; long may it continue so, and never

have occasion for the tongue of the one, or the pen of the other, both equally destructive to men's estate and lives; besides forsooth, they, hangman-like, have a license to murder and make mischief." Nor does literature seem to rank very high in his estimation; for all that the book contains on the subject is comprised in two lines: "In the said city," saith Gabriel, "are several good schools of learning for youth, in order to the attainment of arts and sciences, as also reading, writing, &c." And then in the very same sentence, and in the same breath he continues, as if they were about the same value, "here *is* to be had on any day in the week, *tarts, pies, cakes, &c.*" "We have also several cook shops, both roasting and boiling." And finally concludes the comprehensive sentence with the pious ejaculation, "happy blessings," (i. e. the learning and the pies), "for which we owe the highest gratitude to Providence." The book is, however, valuable for the illustration it affords of our early annals. Among the trades of Philadelphia, of which a considerable list is given, and which he says, have all constant and profitable employment, I find "Printers and Bookbinders," and several others which one would suppose were quite prematurely introduced. Barton in his *Memoirs of Rittenhouse*,* speaks of the establishment of a paper mill at Germantown, about the year 1700, by William Rittenhouse, and his son Nicho-

* Page 83, note 5.

las, ancestors of the philosopher; but the making of paper here was still earlier, since in 1697, Thomas says, "all sorts of very good paper are made in the Germantown." In another place he says, "two miles from the metropolis are purging mineral waters as good as Epsom."

The first literary work, (upon any other than a religious subject,) that the press of Philadelphia produced, was published in 1699, with the following quaint title: "*God's protecting Providence man's surest help and defence in times of the greatest difficulty, and most imminent danger. Evidenced in the remarkable deliverance of divers persons from the devouring waves of the sea, amongst which they suffered shipwreck; and also from the more cruelly devouring jaws of the inhuman Canibals of Florida. Faithfully related by one of the persons concerned therein, Jonathan Dickenson. Printed in Philadelphia by Reinier Janson, 1699.*" A copy of this curious volume, now become very rare, is in the city library, but unfortunately a few of the last pages are wanting. I have read it with a good deal of pleasure. It is a simple and unadorned, but very interesting and touching narrative, of the adventures of a number of persons, the passengers and crew of a vessel which on a voyage from Jamaica to Philadelphia, were in September, 1696, wrecked on the coast of Florida; where they fell into the power of the savages, were cruelly treated by them, and suffered from hunger, cold, and ill-usage, almost unto

death. By the kindness of the Spanish Governor of St. Augustine, they were rescued from the Indians and carried to that place, where they were received with the most delicate hospitality, and having been clothed and abundantly provided for, were sent to Carolina, whence they reached Philadelphia, in February, 1697. The passengers in this unfortunate vessel, were 22 in number, besides the author, his wife and a child, only six months old, whose sufferings during their captivity are told in a very affecting manner. A considerable portion of the preface is devoted to an account of the life and religious services of Robert Barrow, one of the passengers, "a faithful servant of the Lord," as the author (himself a zealous "Friend,") styles him. From this it appears, that he was a native of one of the northern counties of England, was early in life convinced of the truth of the Quaker doctrines, and in 1694, "the spirit of God requiring him to come over into these parts to preach the gospel," he obeyed the call, though with some reluctance, visited Philadelphia in the course of his travels, and having staid here a year or two went to the West Indies; and while on his return met with the calamities detailed in the book, and which broke down his constitution. He survived however until the arrival of the vessel at Philadelphia, though he was in so weak a state with illness, that they were obliged to carry him on a hammock, to "Samuel Carpenter's house;" and he lived only five days afterwards. He appears to have entered keen-

ly into the religious controversies of the times, for his biographer relates, that one of his first questions on landing, though extremely ill, was, "what was become of George Keith's people." On receiving the intelligence of their total defeat, he manifested a very lively joy, and testified stoutly against the national church, the stipendiary clergy, and the militia. In this edifying frame of mind he continued until his death, which took place on the 4th of February, 1697.

Of Jonathan Dickinson, the author, little is learned from his book further than what he tells us in his preface. In reply to a doubt which he thinks may be suggested of the authenticity of the narrative, he declares, that "the writer is a man well known in this town, of good credit and repute, on whose fidelity and veracity those who have any knowledge of him will readily rely, without suspecting fallacy." He lived to acquire considerable distinction and extensive property. Our worthy ancestors seem to have been equally heedless of the maxims of political economy in respect to the division of labour, and of the well established truths of political philosophy in regard to the separation of the legislative and judicial branches of government, for, in 1781, we find Mr. Dickinson holding, at the same time, the office of chief justice of the province, and speaker of the Assembly; to which in the next year he seems to have *super* added that of *Master in Chancery*. Not long afterwards he figures as a member of Council, and as a

Commissioner to treat with the Indians at Conestogoe. He was withal, to use the words of that "honest Chronicler," *Robert Proud*, "a merchant of considerable fortune, and possessed a large estate in Philadelphia. He bore a general good character, was universally much beloved, and died in the year 1722."

The appearance of the book argues great deficiency in typographical skill and materials. It is wretchedly executed and disfigured by constant blunders. The printer, who by his name seems to have been one of the Swedish settlers, is supposed by Thomas,* to have acted as *locumtenens* for Bradford, at that time in exile at New York. A second edition was printed in 1735, by a more celebrated typographer, BENJAMIN FRANKLIN.

The year 1719 deserves particular remembrance in the annals of Pennsylvania, as that in which the first newspaper was printed in the state. These potent engines exercise so vast an influence for good or evil over men's minds and actions in the present age, that a particular history of their rise and progress would be no idle or unprofitable task, though out of place here. The first number of the "*American Weekly Mercury*," as it was called, appeared on the 22d of December 1719.

* Hist. Printing, Vol B.

on a half sheet of the quarto size, and purported to be printed "by Andrew Bradford at *the Second Street,*" and to be sold by him and by John Copson in Market Street. The price was 10 shillings per annum; and this was quite as much as it deserved. Extracts from foreign journals generally about six months old, and two or three badly printed advertisements formed the substance of the journal. The office of the editor was a sinecure—at least his *pen* seems to have been seldom employed; and little information can be derived from the journal, concerning the existing condition of Philadelphia. Occasionally a bill of mortality tells us that one adult and one child died during a certain week, and even that is beyond the usual number; for some weeks appear to have passed without a single death. From the following advertisement which appears in No. 17, something of the customs and state of things at the period may be gathered, "These are to give notice that Matthew Cowley a skinner by trade is removed from Chestnut Street to dwell in Walnut Street *near the Bridg,* where all persons may have their buck and doe skins drest," &c. "He also can furnish *you* with bindings," &c. What new ideas of Walnut Street does not this hint about a *bridge* give us; and how plenty must deer have been in those times when *all persons* are invited to have their skins drest by Matthew Cowley; and then what a familiar and village sort of acquaintance with every body, does not the transition at the end from the

third to the second person plural imply. "He also can furnish you with bindings," &c.

Nine years after the appearance of the American Mercury, the Philadelphia Press was delivered of a second newspaper to which the modest title was given of "*The Universal Instructor in all Arts and Sciences, and Pennsylvania Gazette.*" In his inimitable auto biography, Franklin has immortalized Keimer, the eccentric publisher of this journal, whose vanity and selfishness, whose wild notions upon religion and morals, and whose turn for poetry and gluttony are so happily and graphically delineated. Franklin, from whom Keimer had stolen the idea of a second newspaper, attacked it in a series of papers published in Bradford's journal and called the Busy Body.* The "*Universal Instructor*" soon fell into decay, and then into Franklin's hands, by whom it was very skillfully and successfully managed, both for his own profit and for the interest and edification of the public. An editorial notice in one of Franklin's papers, proves in rather a ludicrous way how badly Philadelphia was supplied at the time (1736) with

* A manuscript note in the file of the American Mercury preserved in the City Library, says, that Franklin wrote the first five numbers, and part of the eighth of this series. The rest were written by J. B. probably Joseph Breintnall a member of the *junta*, whom Franklin describes as a "good natured, friendly, middle aged man, a great lover of poetry, reading all he could meet with, and writing some that was tolerable. Very ingenious in making little nicknackeries, and of sensible conversation."

printing presses. What was called the *outer form* was printed reversely or upside down to the inner form, and the following apology is offered. "The printer hopes the irregular publication of this paper will be excused a few times by his town readers in consideration of his being at Burlington with the press, labouring for the public good to make money more plentiful."

It is not generally known that this venerable journal survived until within a year or two of the present time under the name of "*The Pennsylvania Gazette*." The third newspaper published in Pennsylvania was "*The Pennsylvania Journal and Weekly Advertiser*," the first number of which appeared on the 2d of December 1742; and several other journals shortly afterwards arose with various success. In 1760, five newspapers were published in the state, all weekly; three of them printed in the city, one in Germantown, and one in Lancaster. In 1810, the number had increased to sixty-six, of which thirteen were published in Philadelphia; and in 1824, an official return to the post master general, stated the number at one hundred and ten, of which eighteen were published in Philadelphia, eleven of them daily: A prodigious increase, which argues that the appetite for this food has increased in full proportion with the population. It is perhaps worth adding that the first *daily* newspaper that appeared on the continent of America was published in Philadelphia.

THERE are few persons on record to whose individual genius and exertions a community has owed so much as to Dr. Franklin. If William Penn was the political founder of the province, Franklin may perhaps be denominated the architect of its literature, the gifted author of many of its best institutions, and the father of some of the finest features of our character. It is seldom, however, that Providence has vouchsafed such a length of years to such an intellect, and still more seldom that such events occur as those which developed the powers and capacities of Franklin's mind. The name of this illustrious man is closely connected with the literary history of Pennsylvania; but his life and actions are too well known to require that any elaborate notice of them should be given here. Referring therefore to his own invaluable memoirs for the events of his personal and political history, I shall content myself with a short sketch of the principal features of his literary career. The year 1723, was that in which Franklin first set his foot in Philadelphia. As he landed on Market Street wharf, and walked up that street, an obscure and almost penniless boy devouring a roll of bread, and ignorant where he could find a lodging for the night, little could he or any one who then saw him, anticipate that later advent, when, sixty years afterwards, he landed upon the same wharf amid the acclamations of thousands of spectators on his return from an embassy, in which he had dictated to

his former king, the terms of peace for the confederated republics of one of which he was placed at the head, and not merely distinguished as a politician, but covered with literary honours and distinctions from every country in christendom by which genius and public virtue were held in estimation. And yet the change was scarcely greater for Franklin than for Philadelphia. The petty provincial village with its scattered houses dotted over the bank of the Delaware, had become a magnificent metropolis, distinguished for the wisdom and liberality of its institutions, and as the seat of a general and republican government, which at the former period could scarcely have entered into his dreams.

At the time of Franklin's arrival in Philadelphia, there were two printing offices in operation. Keimer, the proprietor of one of them, had however but one press and a few worn out types, with which, when Franklin visited him he was composing an elegy, literally of his own *composition*, for it had never gone through the usual process in this manufacture—of pen and ink—but flowed at once from his brain to the press. The subject of these typographical stanzas was *Aquila Rose*, an apprentice in the office, whose surname naturally suggested to the mind of Keimer some touching figures. If we may judge from some specimens of his poetry which Thomas has preserved in his *History of Printing*, the province lost little by Keimer's emigration to Bermuda which took place shortly afterwards.

Soon after his arrival, Franklin formed an acquaintance with three other provincial poets, *Watson*, *Osborne*, and *Ralph*, whom he describes as "all lovers of reading," and with whom he says he "had many pleasant walks on the banks of the Schuylkill, where they read to one another and conferred on what they had read." Of the first two little is known. *Ralph* was destined to considerable notoriety. He accompanied Franklin to England in 1725, where he began his literary career as a party-writer, and had the misfortune to become obnoxious to POPE, who has inflicted upon him a severe token of remembrance. He is twice mentioned in the *Dunciad*. In book I. the poet exclaims

"And see! thy very Gazetteers give o'er,
Even *Ralph* repents, and Henley writes no more."

And in book III. he is brought out more into relief.

"Silence ye wolves! while *Ralph* to Cynthia howls
And makes night hideous—answer him ye owls!"

Pope's annotator tells us that *Ralph* brought this upon himself by the publication of an abusive piece upon Dr. Swift, Gay, and Pope. He was not noticed in the first editions of the *Dunciad*. He published a poem called "*Night*," to which these lines allude, and vindicated his neglect of dramatic rules by the authority of Shakespear. "He ended at last," says the annotator "in the common

sink of all such writers a political newspaper, and received a small pittance for pay." It may be doubted however, whether his literary character deserves all the obloquy that is thrown upon it by Pope and his commentator. It must be remembered that he took a side in politics opposite to Pope. His political pamphlets were highly applauded at the time, and his chief work "The history of England during the reigns of William, Anne, and George I." in 2 volumes folio, received no mean praise from Charles Fox, who calls him "an historian of great acuteness as well as diligence, but who falls sometimes into the common error of judging too much by the event."* His last publication was entitled "The case of Authors stated with regard to Booksellers, the Stage and the Public," which is said to contain "much good sense and lively satire." Mr. Ralph died at Chiswick in the year 1762.

In 1727, Franklin instituted a club for mutual improvement, which was named the *Junto*, and which continued nearly forty years, without its nature and objects being publicly known, though "the chief measures of Pensylvania," it is said, "received their first formation here." The JUNTO is described by its distinguished founder as "the best school of philosophy, morality and politics, that then existed in the province." And it appears

* Hist. Jas. 2. p. 126.

to have exerted a powerful influence on the fortunes of some of its members, and probably contributed in no small degree to foster that literary taste and philosophical spirit which have been the honourable distinction of this city. They met every Friday evening,* and each member paid a penny a night to recompence the landlord for fire and light. Economy was one of their characteristic virtues. Terrapins and whiskey punch were unknown to their frugal and temperate deliberations. A copy of the set of rules formed in the time of Dr. Franklin, and probably written by him, is still in existence. They are twenty-four in number, and exhibit in so strong a light the importance, while they display the machinery of the Institution, that I am induced to transcribe them.

“ Previous question to be answered at every meeting. Have you read over these queries this morning, in order to consider what you might have to offer the Junto touching any one of them, viz :

1. Have you met with any thing in the author you last read remarkable or suitable to be communicated to the junto, particularly in history, morality, poetry, physic, travels, mechanic arts, or other parts of knowledge.

2. What new story have you lately heard agreeable for telling in conversation?

* Their place of meeting in their early days, was in Market Street, below Third, at the sign of the Indian King.

3. Hath any citizen in your knowledge failed in business lately, and what have you heard of the cause?

4. Have you lately heard of any citizens thriving well, and by what means?

5. Have you lately heard how any present rich man here or elsewhere got his estate?

6. Do you know of any fellow citizen who has lately done a worthy action deserving praise and imitation; or who has committed an error proper for us to be warned against and avoid?

7. What unhappy effects of intemperance have you lately observed or heard; of imprudence; of passion; or of any other vice or folly?

8. What happy effects of temperance; of prudence; of moderation; or any other virtue?

9. Have you or any of your acquaintances been sick or wounded. If so, what remedies were used, and what were their effects?

10. Who do you know that are shortly going voyages or journies, if one should have occasion to send by them?

11. Do you think of any thing at present in which the junto may be serviceable to mankind, to their country, to their friends, or to themselves?

12. Hath any deserving stranger arrived in town since last meeting that you have heard of; and what have you heard or observed of his character or merits; and whether think you it is in the power of the junto to oblige him, or encourage him as he deserves?

13. Do you know of any deserving young beginner lately set up, whom it lies in the power of the junto any way to encourage?

14. Have you lately observed any defect in the laws of your country, of which it would be proper to move the legislature for an amendment. Or, do you know of any beneficial law that is wanting?

15. Have you lately observed any encroachment on the just liberties of the people?

16. Hath any body attacked your reputation lately; and what can the junto do towards securing it?

17. Is there any man whose friendship you want, and which the junto or any of them can procure for you?

18. Have you lately heard any members character attacked, and how have you defended it?

19. Hath any man injured you, from whom it is in the power of the junto to procure redress?

20. In what manner can the junto, or any of them, assist you in any of your honourable designs?

21. Have you any weighty affair on hand, in which you think the advice of the junto may be of service?

22. What benefits have you lately received from any man not present?

23. Is there any difficulty in matters of opinion of justice and injustice, which you would gladly have discussed at that time?

24. Do you see any things amiss in the present

customs or proceedings of the junta, which might be amended?"

Besides the preceding questions, the following articles of faith, as they may be called, were proposed to each new member, who was required to lay his hand on his breast as he answered them.

"1. Have you any particular disrespect to any member present? *Answer:* I have not.

2. Do you sincerely declare that you love mankind in general, of what profession or religion soever? *Answer:* I do.

3. Do you think any person ought to be harmed in his body, name, or goods, for mere speculative opinions, or his external way of worship? *Answer:* No.

4. Do you love truth for truths sake, and will you endeavour impartially to find and receive it yourself, and communicate it to others? *Answer:* Yes."

Among the earliest members of the Junta, were *Brientnall*, who has been already mentioned, *Nicholas Scull*, afterwards surveyor general, who says *Franklin* "loved books and sometimes made verses;" *William Parson*, bred a shoemaker, who studied mathematics with a view to astrology which he afterwards ridiculed; *William Coleman*, afterwards one of the Judges of the Supreme Court, upon whom *Franklin* bestows this lofty praise, "he had the coolest, clearest head, the best heart, and the exactest morals of almost any man I ever met with:" and *Thomas Godfrey*, the author of

the quadrant, of which noble invention he has been meanly plundered. Godfrey was in humble life, a glazier by trade, but great and self-taught in mathematics, in which according to Dr. Franklin he was so much absorbed, that he neglected his business. It is recorded of him, that he taught himself the Latin language, in order to be able to read *Newton's Principia*, which he mastered at an early age; an undertaking of no easy kind, even under the most prosperous circumstances. Godfrey however was depressed by the *res angusta domi*, and for the honour of inventing the quadrant contended with heavy odds against an Englishman of some distinction, backed by all the self-love of that nation, and by the then prevailing opinion in Europe, that no good could come out of our Nazareth. His death which took place at an early age, left his family in narrow circumstances. James Logan speaks of him thus in one of his letters: "Thomas Godfrey has a fine genius for the mathematics, and it would for the sake of his birth place, which is the same as that of my own children, be a great pleasure to me to see him rewarded." That reward however never came. He was suffered to go down to the grave in poverty and distress. His remains lie without any memorial, in a neglected field; and that which should have immortalized his name is bestowed upon a foreigner and an impostor.

In 1730, Franklin proposed to the club to bring their books together, so as to form a common stock for the general convenience. Thus the first joint

library was formed in Philadelphia. The next year he set on foot proposals for a public library : procured 50 subscribers, at 40 shillings, and 10 shillings a year for 50 years. This was the foundation of the Library Company, which has been so long a subject of just pride to our city, and which has operated so beneficially upon her literary and moral character.

In 1743, Franklin suggested the establishment of a college for the education of young men in the higher branches of knowledge, from which the Academy, now the University of Pennsylvania originated ; and the next year he was one of the chief agents in organizing the Philosophical Society. The history of the rise and progress of these institutions is so well known that it is quite unnecessary to enter upon it in this place.

In the Provincial annals of Pennsylvania, few names appear with more just distinction than that of JAMES LOGAN, who was successively Secretary of the Province, and Clerk of the Council, Commissioner of property, Chief Justice, President of the Council, and what was far better, a most learned, honourable and liberal man. It is with his literary character alone that I have at present any concern ; and although the Quarterly Reviewers, with characteristic effrontery, have sneered at him as "*a man of the name of Logan, as obscure as Godfrey*"

himself;" yet certainly as a man of science and letters he has had few superiors out of the province. He arrived in Pennsylvania in the year 1699, and was then in the 25th year of his age. It was not however until the year 1730 that he became generally known for his proficiency in science. He communicated to the Royal Society several valuable papers, three of which are to be found in one volume of their transactions (the 38th.) In 1739 he published at Leyden his valuable treatise in Latin, entitled, *Experimenta et meletemata de Plantarum generatione*," which was republished in London, in 1747, with a version on the opposite page, by Dr. Fothergill.* He printed at Leyden, at the same time, another learned treatise, entitled, "*Canonum pro inveniendis refractionum tum simplicium tum in lentibus duplicium focus, demonstrationes geometricæ. Autore Jacobo Logan, Judice Supremo et Præsidente provinciæ Pennsylvaniensis in America.*" In 1734 he translated Cicero's tract *de Senectute*, which 10 years afterwards was printed by FRANKLIN, in a style which in correctness, and the distinctness of the types, far exceeds some of our modern productions. The translation is faithful, and at the same time

* The translator made the following remarks in the preface, "Our author's address in choosing and conducting experiments and his capacity for the abstrusest researches, would doubtless have enabled him to give the world ample satisfaction on this intricate subject, had he been permitted to prosecute his inquiries. But his country called him to more important affairs, and kept him constantly engaged in employments more immediately beneficial to society."

easy, and the learned author enriched it with very entertaining notes, explanatory of the persons and things treated of in the text. In the preface which was written by Dr. Franklin, we are told, that "this version was made ten years since, by the honourable and learned Mr. Logan of this city; undertaken partly for his own amusement, (being then in his 60th year, which is said to be nearly the age of the author when he wrote it,) but principally for the entertainment of a neighbour, then in his grand climacterick; and the notes were drawn up solely on that neighbour's account, who was not so well acquainted as himself with the Roman history and language." His charges as Chief Justice were reprinted abroad, and are said to be "of singular excellence. He appears in them not only as a watchful guardian of the domestic weal, and as a sagacious director, but as a profound moralist and beautiful writer. Such subtile disquisition, and lofty speculation, such variety of knowledge and richness of diction, are seldom found in compositions of any kind."* He was well versed both in ancient and modern learning, acquainted with the oriental tongues, and a master of the Latin, Greek, French, and Italian languages. He died on the 31st of October, 1751, aged 77, leaving to the people of Pennsylvania a noble monument of his munificence, in the Loganian Library,

* Walsh's Appeal, p. 275, 477.

which he had been 50 years in collecting, and the value of which is well known to all men of learning.* Such was "the obscure man of the name of Logan."

Contemporaneous with Logan and Franklin, and in the habit of constant intercourse with them was John Bartram. This celebrated self-taught philosopher, of whom Linnæus said that he was the greatest natural botanist in the world, was born near Derby in what was then Chester County, in the year 1701. His grandfather of the same name with himself came from Derbyshire in England in 1682. Very early in life his ruling passion, the love of nature and her productions, broke out, and he manifested that eagerness and capacity for learning which characterised all his after life. He

*The following extract from his will shows the importance of the collection: "In my library which I have left to the city of Philadelphia, for the advancement, and facilitating of classical learning, are above 100 volumes of authors, in folio, all in Greek, with mostly their versions. All the Roman classics, without exception. All the Greek mathematicians, viz. Archimedes, Euclid, Ptolemy, both his geography and Almagest, which I had in Greek, (with Theon's Commentary, in folio, above 700 pages) from my learned friend Fabricius, who published 14 volumes of his *Bibliothèque Grecque*, in quarto, in which after he had finished his account of Ptolemy on my inquiring of him at Hamburgh, how I should find it, having long sought for it in vain in England, he sent it to me out of his own library, telling me it was so scarce, that neither prayers nor price could purchase it: besides there are many of the most valuable Latin authors, and a great number of modern mathematicians, with all the three editions of Newton, Dr. Watts, Halley, &c."

was the first American who founded a botanic garden ; and his reputation became so extensive that he corresponded with most of the distinguished foreign philosophers, was made a fellow of several of the scientific societies of Europe, and finally appointed American Botanist to George III. Like Franklin, he was very ingenious as a mechanic. The house in which he resided was built by himself ; the stone was quarried, and the timber prepared by his own hands ; and on its completion he dedicated it by the following distich which he engraved in front :

“ To God alone : the Almighty Lord :
“ The Holy One by me adored.”

John Bartram, 1770.

This learned and accomplished man was born and educated a Quaker, and is said to have been modest and gentle in manners, of amiable disposition and liberal mind. He died in September 1777. His son William Bartram inherited his father's tastes and talents. In 1773 he undertook a long and arduous journey, as he says “at the request of Dr. Fothergill of London to search the Floridas, and the western parts of Carolina, and Georgia, for the discovery of rare and useful productions of nature, chiefly in the vegetable kingdom.” His travels which were published in a thick volume in 1791, are fruitful of information, and interest for botanists, contain many valuable facts on the subject of the Indians, and are not without amusement for readers in general. They

prove also that the author possessed together with his father's taste and talents, his laudable zeal in the pursuit of knowledge, and his excellent and liberal feelings.

The subject of slavery and the slave trade agitated the public mind of Pennsylvania very early in its colonial life, and sent men to the press with a long succession of pamphlets. Before the end of the 17th century, George Keith published an essay against the traffic in slaves, the first remonstrance that this country gave birth to. Dr. Franklin says in a letter dated November 4th, 1789, "I find by an old pamphlet in my possession that George Keith near an hundred years ago, wrote a paper against the practice of slave holding, said to be "given forth by the appointment of the meeting held by him at Philip James's house in the city of Philadelphia about the year 1693," &c. "And about the year 1728, or 1729, (Franklin continues) I myself printed a book for Ralph Sandiford another of your friends of this city, against keeping negroes in slavery ; two editions of which he distributed gratis. And about the year 1736, I printed another book on the same subject for Benjamin Lay, who also professed being one of your friends," &c. The lives of Sandiford and Lay, and of Anthony Benezet, another distinguished labourer in the same cause have been written by a

gentleman* in no wise inferior to either of them in singleness of heart and devotion to the public good, and whose philanthropy is rendered more useful to his fellow citizens as well as honourable to himself by subjection to the discipline of a better regulated common sense than seems always to have governed the labourers in this vineyard. The tone and temper in which these memoirs are written, and their literary execution gives us reason to regret that their excellent author has not continued his labours, and furnished us with biographies of some more Pennsylvanians. Sandiford, Lay, and Benezet, were the principal ante-revolutionary writers on the subject of slavery. The first was a native of Liverpool in England, and came to Philadelphia while a youth. His early years were passed as a seaman; in which capacity he visited the West Indies. In 1729 he published the work to which Franklin alludes, and which in the fashion of the day he entitled "The Mystery of Iniquity or a brief examination of the practice of the times." He died in 1733, at Lower Dublin, in the County of Philadelphia. Benjamin Lay, who went a step beyond him in enthusiasm, was born in 1677, in Essex County, England, like Sandiford was a sailor in the early part of his life, and came to Philadelphia at the age of 54, where he soon began to testify with an equal degree of zeal against eating meat and holding slaves. In 1737, he published his first pamphlet against slavery, which was fol-

* Roberts Vaux, Esq.

lowed by many others, all circulated gratis. His enthusiasm on this subject was excessive, and often very annoying to others; but his anti-carniverous system came near proving fatal to himself; for attempting to fast in imitation of The Saviour, he was reduced almost to the gates of death. The good sense of his friends saved him, and he lived to the patriarchal age of 82. The life of Anthony Benezet was more diversified by incidents, and is better known than those of his predecessor in the same cause; to which he devoted almost his entire life, and his utmost abilities, with surprising constancy and zeal. Born in France in 1713, he came to Philadelphia at the age of 18; where, after passing several years, as a teacher in the public schools, he became impressed with the subject of African slavery. In 1762, he published his "account of that part of Africa inhabited by the Negroes." Many other works on this and religious topics were successfully put forth by him, which all bore the stamp of his mind, strength, simplicity, and order. He attained an enviable height in the estimation of his fellow citizens, and died in 1784, aged 71.

The year 1732, gave birth to David Rittenhouse, a man who is deservedly ranked among those benefactors and ornaments of this country, by whom her character is elevated and distinguished. He was born at Germantown in the County

of Philadelphia, and was the son of a respectable farmer. His fondness for mathematical science was displayed at the early age of 14, and while he was literally at the plough, the handles of which were covered with his calculations; and at the age of 17, without foreign assistance, he constructed a complete clock. Astronomy next became the subject of his inquiries, and procuring a few books, he soon made a wonderful progress. In 1768, he completed his first orrery, on which occasion Mr. Jefferson observed, that "as an artist he had exhibited as great proofs of mechanic genius, as the world had ever produced." The next year in company with several others, a committee of the American Philosophical Society, appointed for the purpose, he observed the transit of Venus. His report on this subject, not only gave satisfaction to the friends of science in this country, but obtained the applause of foreign astronomers. In 1775, he delivered the annual oration before the Philosophical Society, in which he exhibited both his attachment to, and profound knowledge of the science of astronomy, and the soundness of his principles as a patriot. The subsequent part of his life is well known, and falls without the limits of this sketch. He died in June 1796, having tasted a full measure of the public honour and respect. "On the whole," says a foreign writer, "as a philosopher and man of science, America has not produced any one superior to David Rittenhouse. To the principle of liberty, he was invariably attached, his

philanthropy was universal and rendered him a friend to the whole human race without distinction of country, colour, or complexion. In private life, amiable and unassuming ; in public, a constant and firm assertor of the rights of man.”*

In the year 1734—5, another religious controversy produced another litter of pamphlets. It seems that the Rev. Mr. Hemphill pastor of one of the Presbyterian meetings, had preached divers popular sermons, inculcating the duty of good works ; but which on being tried by the test of orthodoxy were found wanting. Accordingly, he was suspended from his clerical functions by a commissioner of the Synod ; but continued nevertheless to preach in public. In July 1735, “he preached twice to a very numerous congregation, at the house where the assembly used to meet.” Several essays *pro* and *con* were published. Dr. Franklin himself entered the list in favour of Mr. Hemphill, with two pamphlets, besides a very ingenious article in the form of a dialogue, between two members of the Presbyterian church, which appeared in the gazette of April 1735. Mr. Hemphill, though a taking preacher, was an indifferent writer ; and after a little while it was disco-

* Most of the facts here stated are taken from the life of Rittenhouse by William Barton of Lancaster ; a work which although exhibiting perhaps too ostentatious a display of learning, is yet pleasingly written, and contains many valuable facts illustrative of the political and literary history of Pennsylvania.

vered that the eloquent sermons which he preached, were not really his own performances, but borrowed literally from other divines. Upon which discovery he took his departure in quest of better fortune, and probably in search of critics, with shorter memories than those of Philadelphia:

Political pamphlets and essays abounded in the years 1764 and 1765. The great question of the expediency of changing the form of government from a proprietary to a regal one was one of the first discussed. Then came the subject of the Indian massacre in Lancaster County, and the question of the policy of the government towards this race. And lastly, the right to call upon the citizens to bear arms; and as involved in this, the doctrine of the lawfulness of war, and the expediency of the system of government pursued by the Quakers, were vigorously contested. The principal writers were Dr. Franklin, Joseph Galloway, John Dickinson and Dr. Smith. Franklin opposed the proprietary interest, and in consequence thereof, at the election in 1764, lost his seat in the house which he had held for fourteen years. The interest which the contest excited, is proved by the number of pamphlets published on these questions. No fewer than thirteen published in one year, (1764,) remain in the collection of the American Philosophical Society. The imposition of the Stamp Act pro-

duced, as may be supposed, great activity in the press. The chief writer was John Dickinson, who acquired great distinction at this period, and of whose Farmer's Letters, Dr. Ramsay says, that in this work, "he may be said to have sown the seeds of the revolution." The celebrated petition to the King, and other memorials adopted by Congress, attest the sharpness of his pen, and the vigour of his mind, and he was no less distinguished for his miscellaneous knowledge and cultivated taste. He died at Wilmington on the 15th of February, 1808, at an advanced age. His political writings were collected and published in 2 Vols. 8vo. in 1810.

The name of *Francis Hopkinson* is more identified with the revolutionary, than with the provincial history of the State; but in sketching out the literature of the province, he must not be omitted. A poet, a wit, a patriot, a chemist, a mathematician, and a judge of the admiralty; his character was composed of a happy union of qualities and endowments, commonly supposed to be discordant; and with the humour of Swift and Rabelais, he was always found on the side of virtue and social order. His publications were chiefly of a fugitive nature, and originally appeared in the Magazines and Newspapers. They are admirable in their way, and he is equally great in exposing the formalities and pedantry of science, and in ridiculing the absurd pre-

tensions of his country's oppressors. Of these productions, the most celebrated are *The Salt Box*, a specimen of collegiate examination; *The Battle of the Kegs*; The essay on *Whitewashing*, and the *New Roof*, an excellent piece in favour of the Constitution of 1788. His works, including his judicial decisions, were after his death collected and published in three volumes. Francis Hopkinson was born in Philadelphia in 1737, and died in his native city on the 9th of May, 1791.

In the year 1760, the Rev. Andrew Burnaby, Vicar of Greenwich, in England, travelled through the (then) colonies, and in the course of his journey visited Philadelphia. On his return, he published an account of his tour in a small quarto volume, which is among the Franklin pamphlets, as the *Athenæum*. He speaks thus of Philadelphia, “arts and sciences are yet in their infancy. There are some few who have discovered a taste for music and painting; and philosophy seems not only to have made a considerable progress already, but to be daily gaining ground. The Library Society is an excellent institution for propagating a taste for literature; and the College well calculated to form and cultivate it. This last institution is erected on an admirable plan, and is by far the best school for learning throughout America. It has been chiefly raised by contributions, and its present fund is

about £10,000, Pennsylvania money. An account of it may be seen in Dr. Smith's (the President's) discourses. The Quakers also have an Academy for instructing their youth in classical learning, and practical mathematics: there are three teachers, and about seventy boys in it. Besides these, there are several schools in the province for the Dutch and other foreign children; and a considerable one is going to be erected at Germantown."

In 1774, was published in Philadelphia, a small work, entitled "Observations on a variety of subjects, Literary, Moral, and Religious, in a series of Original Letters, written by a gentlemen of foreign extraction, who resided some time in Philadelphia." The author was the Rev. Mr. Duché, an Episcopal Clergyman, who is said by Graydon to have been "a weak and vain, but probably not a bad man." He engaged in the early part of the revolutionary conflict: was a whig at first, but when the British entered Philadelphia, changed sides, and wrote an insolent and presumptuous letter to General Washington, in which he advises him to renounce what he was pleased to style, "a degenerate cause." He also published a volume of Sermons. The signature to his series of letters is the affected name of Tamoc Caspipina, two words formed by the first letters of his clerical title. The Assistant Minister Of Christ Church And St. Peter's In Philadelphia, In North America. The literary merit of these letters is very small. The observations are extremely trite and common-place, and

they are brought up in support of the most obvious principles of religion and morals. The author gives us few particulars of the state of things in Philadelphia. He bears testimony, however, to the love of letters, which has at all times prevailed among us. "You would be astonished," (he says in one letter p. 11,) "at the general taste for books which prevails among all orders and ranks of people in this city. The Librarian (of the city Library,) assured me, that for one person of distinction and fortune, there were twenty tradesmen that frequented this Library." And in a subsequent letter "literary accomplishments here meet with deserved applause: such is the prevailing taste for books of every kind, that almost every man is a reader, and by pronouncing sentences right or wrong upon the various publications that come in his way, puts himself upon a level in point of knowledge with these several authors." Page 30. "Many excellent productions in the literary way, have been published here. That spirit of freedom which I have already mentioned, has given birth even to orators and poets, many of whose performances I have heard and read with the highest satisfaction."

Pennsylvania has produced her full share of poets. Besides those I have already mentioned, must be recorded, the names of Beveridge, Godfrey and

Evans. In the year 1765, was published a volume (the first of the kind printed in Philadelphia,) of Latin poems. The author, John Beveridge, was at the time Professor of Languages in the College and Academy of Philadelphia, to which station he was appointed in 1758. He was a native of Scotland, and originally taught a school in Edinburgh. Of this learned person, an amusing account is given by Graydon, in his entertaining memoirs of his own life. He appears to have possessed an accurate and profound acquaintance with the ancient languages, but out of these his acquirements were limited; and in knowledge of human nature, he seems to have been about on a par with *Dominie Sampson*. The management of a school of seventy or eighty boys was entirely beyond his powers, although he was nominally assisted in the business of teaching by two others. A collection of poems, which was published by subscription, was entitled "*Epistolæ Familiares, et Alia Quædam Miscellanea*." For the most part, these pieces are written with considerable purity and elegance, but even in Europe, where a greater number of competent readers of Latin poetry exists, they would probably have shared the fate they have met with here, and

"Yielded to the wand of dull oblivion."

In an ingenious poetical address to John Penn, the Professor of Latin more than hints that a conveyance to him in fee simple, of some few of the

many thousand acres possessed by the Penn family, would not be an unsuitable reward for the immortality bestowed upon him by the poet; and reminds him, that without the aid of Virgil and Horace, the fame of Ajax and Mæcenæ, would have travelled but a little way out of their own doors. Notwithstanding these sagacious suggestions poor Beveridge continued to ply the birch, and never, it is believed, attained that independence he so pathetically and poetically coveted.

Of THOMAS GODFREY, the poet and son of the ingenious inventor of the quadrant, a brief memoir has been left by his friend Evans. He was born in Philadelphia in 1736. His father dying (when he was very young and leaving little property the son received only a plain English education, but displayed in his early years that talent for and attachment to poetry, which was the delight and distinction of his short after life. He is said also to have possessed a fine ear for music and a strong inclination to painting, to which art he was desirous of being bred, but his friends ordered otherwise. He was apprenticed to a watch maker, but devoted all his leisure hours to poetry, and tired of his mechanical employments he obtained a lieutenant's commission in the Pennsylvania forces, raised in 1758 for the expedition against fort Du Quesne, in which station he continued until the campaign

was over, when the provincial troops were disbanded. The succeeding spring he accepted the offer of an agency in North Carolina, where he remained 3 years. On the death of his employer he returned to Philadelphia, where he obtained the station of a supercargo in a small vessel to New Providence. Here he remained several months, and then sailed again for North Carolina, where in a few weeks after his arrival he died of a bilious malignant fever. His death took place in August, 1763, in the 27th year of his age. His poems are highly praised by his biographer, who extols in glowing language the sweetness of his disposition, the warmth of his heart, and the strength of his friendship.

The Reverend Nathaniel Evans, Minister of the Protestant Episcopal Church, and Missionary to Gloucester county, N. Jersey, published a volume of poems in 1770, most of which may be read now with pleasure. If not remarkable for energy or originality, the *vivida vis animi*, they are smooth and polished, and indicate the possession of a refined taste and lively imagination. From a short memoir of him, which I have seen, it appears that he was born in Philadelphia; in 1742, and received his education at the academy then newly instituted. After spending six years in this institution, his friends withdrew him and placed him in a counting

house. He devoted his time however to the muses, and after the expiration of his apprenticeship returned to college, where he applied himself so assiduously to the study of philosophy and literature, that by a special vote of the trustees on recommendation of the faculty he received the degree of M. A., although he had not taken the previous degree of B. A. Immediately after this he repaired to England, where he was admitted into holy orders by Dr. Terrick, Bishop of London, who is said to have expressed great satisfaction with his essays on theological subjects. He returned to Philadelphia in December, 1765, and immediately entered upon the duties of a mission at Gloucester, in New Jersey, to which he had been appointed. He lived only long enough to show his fitness, both moral and mental, for the holy office he had undertaken, and closed his blameless life on the 29th of October, 1767, dying like his friend Godfrey, who preceded him only four years, at a very early age.

The first *literary* journal ever published in any part of the United States appeared in Philadelphia. This was "The General Magazine and Historical Chronicle," printed and edited by Dr. Franklin, of which the first number appeared on the 1st of January, 1741. It was continued for about a year. A copy of it is in the city library. It is chiefly occupied with the proceedings of the English parlia-

ment, and public documents, but contains nevertheless some original matter, not without interest at the present day. Another journal was published in the same year by Bradford, entitled "The American Magazine," but it existed only two months. In 1757, Bradford revived it, but with similar success; for only three numbers were published. In 1769 a small periodical work of little worth, entitled the "Penny Post," was published by Benjamin Mecom. His design was to print it weekly, but it was in fact published at irregular periods. Another journal under the name of "The American Magazine," was published in 1769, by Lewis Nichola. It ended with the year. Nichola was born in France and educated in Ireland. He was the author of a military treatise, written at the commencement of the revolution, and I believe attained a high rank in the Pennsylvania line. In 1771 was published "The Royal Spiritual Magazine or Christian's Grand Treasury:" a few numbers only appeared. In 1775 Robert Aitken printed "The Pennsylvania Magazine or American Monthly Museum." Thomas Paine was editor, and one of the principal writers for this journal. Many of the articles bear the impress of his powerful writing; and the journal is on other accounts one of the best which appeared before the Revolution.

The activity of the press of Philadelphia before the revolution, and the general diffusion of a lite

rary taste is proved by the large number of literary productions of the period yet extant. It is not possible now, perhaps, to ascertain the exact number that were published, but it may surprise many to learn that there are in the city library no fewer than 459 works printed in Philadelphia before the revolution. Of these 425 are original books and pamphlets, and 34 reprints of foreign books and pamphlets. Many were doubtless printed which were never purchased for the library, and some that were in the library have been lost or destroyed. Perhaps one third might safely be added to the number in the library, which would give upwards of 600 for the number of works printed in the province.

In the year 1766 Robert Bell, who did a good deal for literature in his way, came to Philadelphia. He was a Scotsman by birth but had lived several years in Dublin, as a bookseller, in which capacity he was some time the partner of George Alexander Stevens, so well known for his humour and facetiousness. Bell first established himself as a book auctioneer, and afterwards as a bookseller. In 1772 he undertook a stupendous enterprise for the time, the reprinting of Blackstone's Commentaries, in four volumes, octavo; with a supplement in a fifth volume. A liberal subscription however rewarded his exertions, and he shortly afterwards

published a second edition of Blackstone in quarto, and editions of Robertson's Charles the Fifth, and of Ferguson's Essay on Civil Society, besides minor works. He was also publisher of the original edition of Paine's celebrated pamphlet COMMON SENSE. It is said that Paine was at one time in Bell's employ as a clerk. After the war broke out, Bell, finding his regular business as a bookseller interrupted, resumed that of selling at auction; and travelled from New Hampshire to Virginia with books for sale. In the course of one of these expeditions, he died at Richmond in Virginia, in September, 1784. In business he was perfectly fair and upright, and is said to have been a very pleasant companion. He had a vein of eccentricity however in his composition, which appeared sometimes in his advertisements. Those for sales at auction were commonly headed: "Jewels and diamonds to be sold or sacrificed by Robert Bell, humble provedore to the sentimentalists." Announcing Blackstone's Commentaries and other books to be published by subscription, he invites the public in these words: "*Intentional encouragers*, who wish for a participation of this *sentimental banquet*, are requested to send their names to Robert Bell," &c.

Literature and science received ample encouragement, both by words and deeds, from the provincial government of Pennsylvania. Before one En-

glish foot had been placed on the soil of the colony, the venerable and illustrious founder issued a manifesto, containing the soundest doctrines of political philosophy, and the most convincing reasons in support of them. The following passages deserve to be constantly borne in mind in every district of this country. "Governments like clocks go from the motion men give them; and as governments are made and moved by men, so by them they are ruined too. Wherefore governments rather depend upon men than men upon governments. Let men be good and the government cannot be bad; if it be ill they will cure it. But if men be bad let the government be ever so good they will endeavour to warp and spoil it to their turn. That therefore which makes a good constitution must keep it, viz. men of wisdom and virtue, qualities that because they descend not with worldly inheritances must be carefully propagated by a virtuous education of youth; for which after ages will owe more to the care and prudence of founders, and the successive magistracy, than to their parents for their private patrimonies."

The 12th article of the Frame of Government, provides in express terms, "That the governor and provincial council shall erect and order public schools, and encourage and reward the authors of useful sciences, and laudable inventions in the province." Among the committee into which the provincial council was to be divided, was "a committee of manners, education and arts, that all wicked and scandalous living may be prevented,

and that youth may be successively trained up in virtue, and useful knowledge, and arts." Such were the sentiments entertained at the outset of the government, and the provisions for enforcing them. The same principles appear to have been cherished at every stage of the colonial history, of which one example has already been given in the extract from the charter of the Friends' school. The Penn family seem to have been uniformly disposed to encourage learning and science, and contributed liberally from their private funds for the purpose. Thomas Penn, who died in 1775, the last surviving child of the founder, and who is said to have been "the worthiest of his children, and the one who most nearly resembled him in abilities and virtues,"* was fond of literary pursuits. His donations to the college of Philadelphia alone, amounted to about 12,000 dollars in money, besides the grant of one half of a manor in Bucks County, containing upwards of 3000 acres. He also founded and endowed a public library in Lancaster, which in compliment to his wife, was called "the Juliana Library."

Nor was the assembly of the province at any time backward in affording countenance, and support to letters and science. Two instances of their liberality deserve particular mention. In the session of 1768—9, the assembly appropriated

* Barton's *Life of Rittenhouse*, p. 179, note 70.

100 pounds sterling to the purchase of a reflecting telescope, with a micrometer, for the purpose of enabling the Philosophical Society to observe the transit of Venus ; and shortly afterwards, at the same session, gave an additional sum of 100 pounds to defray the expense of erecting observatories. In 1771, they granted to Dr. Rittenhouse the sum of 300 pounds by a resolution, which expressed that it was given “as a testimony of the high sense, which the house entertains of his mathematical genius, and mechanical abilities in constructing his orrery.”

NOTE A.

SOME light is thrown upon the subject by the following extract from Keith's Journal of his subsequent travels, of which mention is made in another part of this memoir.

“I happened in America, while I was there travelling, to see a book lately printed, called *New England Judged*, having a printed appendix to it by John Whiting, Quaker, who has set up of late for a great author among them, and who is extremely ignorant as well as confident to utter falsehoods and abusive slanders. In his appendix he utters a notorious falsehood upon me, as if at *Philadelphia* about the year 1692, I had fained

myself a prisoner, and to make this fiction to be believed, I had gone to the porch of the prison, the prison door being shut against me, and from the porch of the prison had writ and dated a paper of complaint against the Quakers for my imprisonment; and to make his reader take the greater notice of it, he has caused the following words to be printed on the margin in great Black Letters; *George Keith's Mock Imprisonment*. Now to prove the notorious falsehood of this, I need go no further than a book of one of his brethren, viz. *Samuel Jennings*, printed at London, 1694, called by him "*The State of the Case*," &c. wherein though he has uttered many falsehoods concerning the state of the case about our differences in principles of religion, in the year 1691, and 1692, whereof I had largely detected him in my printed reply to his book: yet he saith true in what he did report in his book concerning two persons whom the Quakers had put in prison, the one for printing a sheet of mine, I called *an Appeal*, &c. and the other for selling one or two of them when printed; the name of the printer is *William Bradford*; the name of the other is *John Mackomb*. Now, concerning them the said Quaker, *Samuel Jennings* reports, that they signed a paper from the prison, when they signed it *in the entry, common to the prison, and the next house*.† Thus he

† It seems from this, that there was but one entry in those days for the prison and the adjoining house.

gives the true matter of fact, and tells truly who signed that paper in the entry or porch which were those two above-named persons, but mentions not me as being concerned in signing that paper, either in the entry or porch, or any where else. And to be sure, if I had been one of the persons who had signed that paper, he would have told the world of it, as thereby thinking to have some great matter against me. For he chargeth it upon these two above-mentioned persons, *William Bradford* and *John Mackomb*, that it was deceit in them to sign a paper from the prison, when they were not in the prison, but in the porch or entry of it, as he saith. In my answer to him, I have showed it was no deceit, nor had any thing blame-worthy; the case was this. They were prisoners by a warrant from some Quaker Justices, for the fact above-mentioned, and *had been detained in prison for some time*, and were ordered to be kept in prison until the next court, unless they gave security by bonds, to answer at the next court. After some time, the jailer, by favour let them go home, but still they were prisoners, not being released by any judicatory; and the Quaker justices delaying to bring them to a trial, they went to the prison to write, and sign their petition from the prison to have their trial at the next sessions; but *it happened that the jailer was gone abroad, and had the key of the prison with him, so that they could not get in*. Now I see no deceit or insincerity in this, more than in the common practice of many Quakers, who

have printed records of their suffering imprisonment (for not paying tithes,) some years, and yet they often had liberty to go home, by favour of the jailors, to my certain knowledge. But whether *William Bradford* and John Mackomb, were guilty of deceit or not, is not material to the present case of *John Whiting*, his vile slander, as if I had been the person, or one of the persons who had writ that paper from the porch or entry of the prison. This is a sufficient proof that what *John Whiting* has thus printed against me was not from the infallible spirit, and that he is, therefore, by *George Fox's* sentence, a deceiver." Page 40, &c.

A
MEMOIR
ON
THE CONTROVERSY
BETWEEN
WILLIAM PENN,
AND
LORD BALTIMORE,

RESPECTING THE BOUNDARIES OF PENNSYLVANIA AND
MARYLAND.

BY
JAMES DUNLOP, Esq.

Member of the Senate of Pennsylvania from Franklin County.

*Read at a Meeting of the Council, November 10th,
1825.*

MEMOIR, &c.

THE disputes which occurred in times almost forgotten, between the proprietaries of Pennsylvania and Maryland, respecting the boundaries of their provinces, afford a subject of curious, if not useful speculation. Their rise, progress, and termination, form not only an amusing portion of the history of the early transactions of our country, but are important, as intimately connected with the land titles of that part of the state which lies within the limits of the disputed territory.

The clashing of the many grants made with such lavish profusion by the sovereigns of Europe, of the savages and soil of the new world, arose from their entire ignorance of the country. The thirst for gold, the spirit of adventure, and zeal of religious enthusiasm, all demanded clamorously, a participation in the wealth, independence, or retirement, which were fondly anticipated to flow from the mighty discoverers of Cabot and Vespucci. By virtue of the fancied right of priority of discovery, the Crown of England not only claimed but

exercised the power of parcelling the extensive coasts and territories of North America, amongst her favourite countries or troublesome subjects.

Whether this assumed authority was better founded, than that which flowed from papal supremacy to the sovereigns of Spain and Portugal, or the vaillating tenure of the thinly scattered and savage aborigines, it is now more curious than useful to inquire. For, however well founded the title derived from such sources might originally have been considered, time, possession, and power have given them a stability, which nothing can endanger, but the weakness and corruption of the holders.

From an ignorance of the geography of the dark and boundless wilderness which was so generously divided, the limits of the numerous grants were so vaguely designated, as invariably to create confusion, and embroil the claimants in difficulties and resentments, which required the labour and patience of years to settle and allay.

In the year 1681, when the charter was granted to William Penn, the distinguished founder of Pennsylvania, by Charles II. King of England, almost the whole country included in its limits, was an uncultivated wild; and to what extent the country was settled at the date of the charter, it would, perhaps, be difficult, and from the means of information within the reach of the author, impossible to ascertain with satisfactory certainty. As early as 1627, the Swedes and Fins had formed establishments within the Capes of Delaware, and

in 1630, Proud (1 Hist. Penn. p. 115, 116,) says, that the Dutch, or as Bozman, (Hist Maryland, p. 245,) thinks the Swedes had built a fort at a place now called Lewistown, in the State of Delaware; and in the year following, the Swedes had pushed their fortifications above Wilmington, and as high up as Chester. The Swedes, says the same author, (1 Pr. 205,) had a Meeting House at Wicocoa, now within the suburbs of Philadelphia, and the Friends one at Upland, or Chester, another at Shackamaxon, or about where Kensington now stands, and a third at the lower falls of Delaware, (Id. 160, 161,) meaning, I presume, the falls at Trenton, as there are no falls below that place. Proud says, that there was not a single house built on the site of Philadelphia when it was laid out by the proprietary and his surveyor, Thomas Holme, in 1682, and that on his arrival, the first house building by George Guest, "on this spot of ground" was unfinished, and that at that time, many of the early settlers and adventurers had their holes or caves for their residence in the high bank of the Delaware, before any houses were built, or better accommodation prepared for them. But there is no doubt that the country in 1681, was partially settled along the bank of the river, as high as the falls, (1 Pr. 160, 161,) and near to where Philadelphia now stands, as Penn himself, in a letter to the Society of Free Traders, in August, 1683, (1 Proud, 260, 261,) says, that "the Dutch mostly inhabit those parts of the province that lie upon,

or near the bay, and the Swedes the freshes of the river Delaware ;” and Proud says, (1 Hist. Penn. 233,) that the site of the city itself, was claimed by some Swedes, with whom Penn exchanged other lands at a small distance for it.

It is impossible to say, to what extent the *English* had made settlements within the limits of what is now the State of Pennsylvania, as early as the date of William Penn’s charter; but that they had long exercised dominion over the country west of the bay and river Delaware, abundantly appears from the records of the proprietary government of New York, (certified copies of which are on record in the office of the Secretary of the Commonwealth at Harrisburgh). Charles II. had granted to his brother, the Duke of York, in 1664, an immense territory in America, embracing the Dutch settlements at New York, and extending southward to the eastern shore of the bay and river Delaware; and the Duke in the same year, issued a commission to Sir Robert Carr, to subdue their possessions on the eastern shore; and after the conquest, which was easily effected, governed the country as an *appendage* to his province of New York by his lieutenants, till 1682, when he released his interest to William Penn. There is no evidence of actual settlements made within the limits of Pennsylvania, amongst the records alluded to, but of a continued and anxious care over the country on the west side of the bay and river Delaware, by the governors of the Duke, residing at New York; and

amongst the same documents, is an Indian deed, of as early date as 1675, to Edmund Andros, governor and lieutenant of the Duke, for land lying at least twenty miles above Philadelphia. This deed is, perhaps, the earliest made by the aborigines to the *English*, of lands on the western shore of the Delaware, and exhibits a curious, but not uncommon uncertainty of boundary, that strongly displays the ignorance of the whites of the topography of the country. It describes the land as "lying on the west side of Delaware river, beginning at a certain creek next the cold spring, somewhat above Matinicum Island, about eight or nine miles below the falls, or as far above the said falls as the other is below them, or furthest that way, as may be agreed upon to some remarkable place, for the more certain bounds, as also, all the islands in the river Delaware, within the fore-mentioned limits, both below and above the falls, excepting only one island, commonly known by the name of Peter Alricks Island, together with all the creeks, &c. &c. to the said tract of land belonging along the river and *behind into the woods, &c.*" The consideration amongst the detail of ammunition, clothing, &c. exhibits the amusing predilection of the grave Sachems for fifty looking glasses and one hundred jews harps. It also contains covenants of seizin and quiet enjoyment, breaches of which I presume, could only be effectually tried by the sword. This tract of country was selected probably for the peculiar excellence of its soil, and patents were

granted for it by Andros to English settlers before the country bore the name of Pennsylvania. (1 Proud, 217.) The lands below at that time remained in the tenure of the Indians, as a commission was three years afterwards issued by Andros to Cantwell and Hannum to purchase from the savages the land as yet unpurchased from the Indians, "below the late purchase at the falls on the western shore of Delaware river."

The charter of Maryland, which its proprietor had intended to call *Crescentia*, but which was designated by his majesty, when the charter was presented to him, *Terra Maria*, in honour of his queen *Henrietta Maria*, was granted by Charles I. in 1632 to Cecilius Calvert, Baron of Baltimore, his "well-beloved and trusty servant." This grant, reciting the pious and laudable zeal of the Baron of Baltimore for extending the Christian religion and the territories of the empire, and his desire to transport, by his own industry and expense, a numerous colony to a certain region hereafter described in a country *hitherto uncultivated* in the parts of America, and *partly* occupied by savages having no knowledge of the Divine Being, transferred unto him, his heirs and assigns, all that part of the peninsula or *Chersonese* lying in the parts of America, between the ocean on the east and the bay of Chesapeake on the west, divided from the residue thereof by a right line drawn from the promontory or head land, called Watkins' Point, situate upon the bay aforesaid, near the river Wighes on the

west, unto the main ocean on the east, and between that boundary on the south unto that part of the bay of Delaware on the north which lieth *under the fortieth degree* of north latitude from the equinoctial, *where New England is terminated*: and all the tract of that land within the metes underwritten, (that is to say,) passing from the said bay called Delaware Bay in a right line, by the degree aforesaid, unto the true meridian of the first fountain of the Potomack, thence verging towards the south unto the southern bank of said river, and following the same, &c.

The Lords Baltimore may well be excused for pressing their claims under this grant as extensively as they did, and which its terms seemed so strongly to justify; but there were two hidden sources of uncertainty lurking under the language of their charter, which cost the proprietaries of Maryland many years of vexation and expense.

In 1681, King Charles II. granted to William Penn the charter for the province of Pennsylvania. This venerable document, which is in the office of the secretary of the commonwealth, is written upon large rolls of strong parchment, in the old English handwriting, with each line underscored with lines of red ink, that give it a curious appearance. The borders are gorgeously furbelowed with heraldic devices, and the top of the first page exhibits a finely executed half-length portrait of his majesty, in good preservation. Though not quite a century and a half old, it may justly be designated a valu-

able piece of American antiquity. The charter designates the province of Pennsylvania, as “that tract of country or part of land in America with the islands as therein contained, as the same is bounded on the east by Delaware river, from 12 miles distance northward of Newcastle town unto the 43° of north latitude, if the said river doth extend so far northward, but if the said river shall not extend so far northward, then by the said river so far as it doth extend, and from the head of the said river the eastern bounds are to be determined by a meridian line, to be drawn from the head of the said river to the said 43° . The said land to extend westward five degrees of longitude, to be completed from the said eastern bounds, and the said lands to be bounded on the north by the beginning of the three and fortieth degree of north latitude, and on the south by a circle to be drawn at twelve miles’ distance from Newcastle *northward and westward* unto the *beginning of the fortieth degree* of north latitude, and thence by a straight line westward to the limits of the longitude above mentioned.”

PENN, it is said, (Proud’s Hist. Pa. 188, 2 id. 208, n.) claimed under this charter unto the beginning of the 40° degree of north latitude, which would be where the 39° degree terminated. But as I have seen no evidence of such preposterous claim from Penn himself, and as it involves the manifest absurdity of a radius of twelve miles from New Castle *northward* intersecting a degree of

latitude lying so much further south, it is probable it was never seriously urged. The ignorance of the king's council of the geography of the country, I have no doubt, led them to believe that the 39° of north latitude lay twelve miles *north* of New Castle, as they were probably guided in their description by the chart of the celebrated Captain John Smith; but as it did not in fact, and the bounds were fixed by the twelve mile radius northward of New Castle, there was no pretension to extend it further south than the twelve miles north of that place.

It was highly important to the proprietor of Pennsylvania to extinguish the claims of the Duke of York, who claimed and exercised jurisdiction upon the western shore of the bay and river Delaware, as an appendage to his government of New York; as the procuring his title to that country would enlarge his sea board, which his sagacious eye perceived was wanted, prevent any future interference with his province itself, and afford an extensive outlet to the produce of his planters. [Penn's Letter to the Lords of the plantations, 1 Proud's Hist. 270—7.]

Opposite as the religious and political opinions of William Penn and James Duke of York certainly were, and as we must believe in spite of the angry conclusions of the historical Review (p. 18,) drawn from the ridiculous stories of the times; the former always was a particular favourite of the latter. Penn, therefore. through his influence with the

Duke, obtained from him in the year succeeding the date of his charter, in consideration of his regard for the memory and many faithful services of Admiral Penn, a deed of release of all the claim of his royal highness to the country within the limits of Pennsylvania, and a grant of his claim to the country on the western side of the bay of Delaware, as far south as "Whoarkill, otherwise called cape Hinlopen," including the town of New Castle and a district of twelve miles around it, and what were afterwards called by Penn the counties of New Castle, Kent, and Sussex. This tract of country was long afterwards known by the name of the territories of Pennsylvania, and the then lower counties of New Castle, Kent, and Sussex, and now constitutes the state of Delaware. It appears from the manuscript sketch of the notes of Mr. Hamilton, of the testimony taken under the commissions issued in the famous cause, in Chancery in England, between the Penns and Lord Baltimore, (and now in the land-office at Harrisburg,) that these counties in more ancient time were called New Amstel, New Hale, and Whoarkill. Sussex maintained the name of Whoarkill until after the surrender of the country to William Penn.

The proprietary of Pennsylvania found himself immediately on his arrival in America, in 1682, involved in extreme difficulties respecting the conflicting claims, of Charles Lord Baltimore, the son of Cecelius, the original patentee of Maryland, not only as respected the western shore of the bay

of Delaware, but also as to the southern limits of his province of Pennsylvania.

The latter claimed with much plausibility according to the terms of his grant not only the whole "Chersonese or peninsula, between the bay of Chesapeake and Delaware," but all the lands lying "under the 40th degree of north latitude;" as respected the peninsula, it was objected that as his grant only contemplated the transfer of lands which were "*hactenus inculta*," it could not include the western shore of Delaware which had been settled several years before its date by the Swedes and Dutch. If this obstacle to the literal construction of his charter could have been surmounted, Lord Baltimore had a clear right to the whole peninsula, but it is apparent if the settlements of the Swedes and Dutch had been effected before 1632, the king had no right to transfer the territory of other nations, and which did not appertain to the crown of England. That such settlements had been effected at that early period, seems incontrovertible, and that Lord Baltimore was aware of their existence is admitted by *Kilty* in his Landholder's Assistant, (p. 165.) as he had been in Virginia shortly before the date of his charter. And, indeed, governor Stuyvesant in a manifesto he transmitted to Lord Baltimore, respecting the claim of the Dutch to the shores of Delaware Bay, asserts their having had a settlement at Cape Henlopen as early as before the planting of Virginia, but that it had been destroyed by the Indians.

Yet it seems very unlikely that the king's council could have been entirely ignorant of those settlements, or of Clayborne's on Kent Island in the bay of Chesapeake, and it is probable that the phrase "*partly* inhabited," in the preamble to the charter was inserted purposely to embrace any settlements within its limits.

But it was afterwards alleged against the validity of his lordship's charter, that his majesty was deceived in the representations made to him of the country being wholly uncultivated, and that therefore the charter was void, at least so far as respected the cultivated parts. The law of England holding with courteous deference to royal grantors, that if the king was deceived in the grant, or granted a greater estate than he had in himself, the grant was wholly invalid, (1. Co. 144 ; Com. Dig. Grant, 8. *G.* 1. Ves. 452.) This doctrine always operated beneficially for the crown, and amounted during the terrors of the Star Chamber, to saying that royal donors might revoke their charters whenever it suited their policy or convenience. This imputation upon the validity of the Lord Baltimore's patent was stated in the bill, (said to have been penned by Mr. Murray, afterwards Lord Mansfield, *Bozmanns Maryland*) filed in Chancery, in England, by the Penns *v.* Lord Baltimore, the trial of which is reported in 1. Ves. 450. The grant however was void, or might be construed to pass all the right of the crown, such as it was, to the settled parts of the country, just as his majesty might be pleased to decree ; and as they were afterwards reduced by

the British arms, they might have been considered as inuring to the use of the patentee.

The grant of Maryland was at least as valid as that made in 1664, by King Charles II. to his brother James, Duke of York, of the Dutch settlements, called by them the New Netherlands, embracing in part what is now the states of New York and New Jersey, at a time when the English government, and the states generally were at peace, and in violation of Oliver Cromwell's treaty of 1653, which guaranteed to the Dutch the full enjoyment of their possessions in America. It is true, that at that time the two governments were not on very good terms, and were growling at each other no little, but there was no open rupture to justify the proceeding or add validity to the grant; as war did not break out till several months afterwards. [6 Hume's Hist. Eng. 283.]

The Duke of York conquered not only the Dutch settlements within the limits of his grant which was bounded westward by the bay, and river Delaware, but in the same year commissioned Sir Robert Carr to subdue their possessions on the eastern shore of the same bay and river; and after their reduction, which was easily effected, exercised sovereignty over them as an appendage to his government of New York, till 1682, when he transferred his claim to the western shore and bay of Delaware to William Penn.

Lord Baltimore's claim to the land lying under the fortieth degree of north latitude, agreeably to

the language of his charter, was urged with equal plausibility, and as little success. He insisted with much apparent reasonableness, that the words “which lieth under the fortieth degree of north latitude,” in his charter, meant certainly a northward extension of his boundary beyond the termination of the thirty ninth, and that he was entitled by the plain and express words of his patent, to extend his limits to the forty first degree of north latitude, and embrace the whole fortieth degree. But the weakness of his claim to the country north of the thirty ninth degree, will be manifest, when we reflect that his charter limits his northern boundary expressly to the “bay of Delaware,” and that consequently he could not, without going beyond a designated natural monument of his boundaries, extend his northern line beyond the point where the bay terminates, and that the limits of the patent must be construed with reference to the information of the country before the council, when it was granted. That information it would seem consisted entirely of the historical account and chart of that part of the new world, by the celebrated Capt. John Smith, as is alleged in the bill of Chancery already mentioned, and supported by the testimony taken under the commissions issued to America in that cause, as appears by the rough drafts of it taken for the Penns by Mr. Hamilton, and on file in the office of the secretary of the land office of Pennsylvania. James Logan deposed “that Capt. Smith’s History of Virginia, was the best, as it was the first

book published by any Englishman of that country, and that his map of the Chesapeake bay, so called at that time, and the parts adjacent, was the most correct account of the first discoveries of a new country he had ever seen, and that he neither knew nor believed any other account or drafts or maps of that country, were published before 1632," the date of Lord Baltimore's charter; and testimony of a similar import was taken from other witnesses well acquainted with that part of the country. As these charts, it appears, fixed the fortieth degree of north latitude at the head of the bay of Delaware, and, if the charter was to be construed with reference to the intelligence before the council, at the time it issued, as was the opinion of the Attorney and Solicitor Generals, Ryder, Yorke, Willes, and Weary, the northern limits should be restricted to those natural boundaries, by which they were designated, and not as the latter remarks, "by an imaginary point of the heavens;" although subsequent and more accurate observations might have ascertained that latitude to lie much further north than the head of the bay.

Lord Baltimore alleged that the fortieth degree of north latitude had been ascertained, and part of the line run in 1681, in pursuance of a letter of the king; but the proprietary of Pennsylvania denied that any such line had been run, and that if any attempt had been made for that purpose, it was done without his knowledge or consent by Lord Balti-

more's agents, (1. Proud, 277.) and in violation of his charter. The claims of Maryland were asserted with continued acrimony, violence, and occasional bloodshed, and as pertinaciously resisted until they were finally terminated, and abandoned in 1760, by the mutual agreement of the parties.

As the Duke of York claimed, by right of conquest, the settlements on the western shores of the bay of Delaware, and had by his deed of 1682, transferred to William Penn, his title to that country, embracing the town of New Castle, and twelve miles around it (as a reasonable portion of land attached to it,) and as far down as what was then called Cape Hinlopen ; an important subject of controversy was the true situation of that cape, and the ascertainment of the southern and western boundaries of the country along the bay as transferred by the Duke's deed.

Though Charles Lord Baltimore, as I have heard, was a man of the fashionable world, and deeply devoted to its pleasures, yet he was by no means inactive in the protection of his interest and in the prosecution of his claims. After two personal interviews in America, the proprietaries separated without coming to any arrangement and with mutual recriminations and dissatisfaction. And they each wrote to the Lords of plantations, excusing themselves and blaming the other. In 1683, Lord Baltimore petitioned the King to make Penn no fresh or confirmatory grant, and urged the plausibility of his own claims. (1. Proud's

Hist. 293.) and in the same year issued a proclamation, offering lands at lower rates than usual within the disputed territory (Vid. 265, N.) for the purpose of inducing settlers to take out their titles under his government. The issuing of those proclamations he afterwards very uncandidly denied to Penn's agent, until his memory was refreshed by their production, and then refused to recall them, alleging (1. Proud's Hist. 272.) that they proclaimed only the ancient prices. In the same year he commissioned Col. Talbot to demand of William Penn, all the lands lying south of the forty first degree of north latitude, (1. Proud. 374.) and his agents shortly after made several attempts, by force, to reduce to submission to his authority the planters who lived in the disputed borders under Pennsylvanian titles, and kept the country in continual alarm.

At length in 1685, one important step was taken towards the decision of the conflicting claims of Maryland and Pennsylvania, by a decree of King James' council, which ordered, "that for avoiding further differences, the tract of land lying between the bay of Delaware and the eastern sea, on the one side, and the Chesapeake bay on the other, *be divided* into equal parts, by a line from the latitude of *Cape Henlopen*, to the fortieth degree of north latitude, the southern boundary of Pennsylvania by charter, and that the one half thereof lying towards the bay of Delaware and the eastern sea, be adjudged to belong to his Majesty, and the other half to Lord Baltimore, as comprised in his charter." (1. Proud,

293, N.) The power of the King's council to decide upon disputed proprietary boundaries, and to enlarge or restrict their limits is fully recognized in the several opinions of the eminent council already alluded to, unless when the parties had entered into agreement to settle their disputes themselves.

This decree of King James, which evidently exhibits a partiality towards the claims of Penn, in decreeing the eastern half of the Peninsula to his majesty, with whom Lord Baltimore could not presume, and indeed had declined to dispute, instead of to the proprietary himself, by no means removed the difficulties which hung over this tedious, expensive, and vexatious litigation. For as we will hereafter see there existed as much uncertainty with respect to the true situation of Cape Henlopen, and the ascertainment of the middle of the Peninsula as any points in contest.

However, after continued altercation, between the proprietaries and their respective settlers, which was interrupted, and perhaps protracted by the death of William Penn, in 1718, and the death of the first Charles Lord Baltimore, who escaped from his worldly troubles in 1714, his grandson, of the same name, and great grandson of Cecilius, the original patentee entered into articles of agreement with John Penn, Richard Penn, and Thomas Penn, (who had become, by the will of their father, sole proprietaries of his American possessions) on the 10th May, 1732, which I suppose they fancied would settle

their respective boundaries to their mutual satisfaction.

By this celebrated agreement, amongst other things, not so important to the object of this essay, it was mutually covenanted and agreed, that the chart annexed to the agreement, which embraced the country in dispute, and the adjacent parts of Maryland, Pennsylvania and Virginia, was a correct impression of the charts sent over to the contracting parties, that they would regulate their negotiations by it, that a semi-circle should be drawn at twelve English statute miles around New Castle, agreeably to the deed of the Duke of York to William Penn, in 1682—that an east and west line should be drawn, beginning at Cape Henlopen, (which was admitted to be below Cape Cornelius,) and running westward to the exact middle of the Peninsula—that from the exact middle of the Peninsula, between the two bays of Chesapeake and Delaware, and the end of the line intersecting it in the latitude of Cape Henlopen, a line should be run northward, so as to form a tangent with the periphery of the semicircle at New Castle, drawn with the radius of twelve English statute miles, whether such line should take a due north course or not—that after the said northwardly line should touch the New Castle semicircle, it should be run further northward, until it reached the same latitude as fifteen English statute miles due south of the most southern part of the city of Philadelphia—

that from the northern point of such line a due west line should be run, at least for the present, across the Susquehannah river, and twenty five miles beyond it, and to the western limits of Pennsylvania, when occasion and the improvements of the country should require—that that part of the due west line not actually run, though imaginary, should be considered to be the true boundary of Maryland and Pennsylvania—that within two months seven commissioners should be appointed by each of the contracting parties, any three or more of whom should be a quorum, to run and mark the said boundaries—that the commissioners should commence their operations as early as October and finish in December of the same year, with all fairness and despatch—that the route should be well marked by trees and other natural objects, and designated by stone pillars, sculptured with the arms of the contracting parties, facing their respective possessions—and that in case a quorum of the commissioner of either party failed to attend, that the defaulting party should forfeit to the other the sum of 5000 pounds.

This important document, though drawn with all imaginable skill and precision, from heads furnished by the high contracting parties themselves, (1.Ves.451.) and seemingly so free of ambiguity, yet was afterwards the subject of much litigation and cavil, both in England and America. But as it was finally carried into complete effect in all its parts, it affords information highly interesting. It ac

counts for the boundaries of what is now the state of Delaware, then called the three lower counties of New Castle, Kent, and Sussex, and explains why the point which is noticed on the maps, was produced between the semicircle around New Castle, and the line running through the peninsula and past the place of contract with it, to within 15 miles south of the latitude of Philadelphia.

The developement of the negotiations between Lord Baltimore and the proprietary of Pennsylvania, shows the anxiety and vexation suffered, and the immense expense incurred by both parties in ascertaining the limits of their respective grants. In the agreement of 1732, each party fancied they had made important concessions and sacrifices for the sake of peace. That Lord Baltimore really thought so there can be little doubt, for he seems by his charter, if it was valid at all, to have a very plausible pretension, not only to all the uncultivated lands covered by the fortieth degree, but even to the cultivated shores of the bay of Delaware. Taking from him however the settled country in that quarter at the date of his grant in 1632, and which reached perhaps up nearly to Philadelphia, and leaving the settlements a reasonable portion of back country, he might well suppose himself entitled fairly to extend his northern limits to the beginning of the forty first degree of north latitude, instead of stopping 15 miles below that city. This would have given him a strip of land now forming a very valuable portion of Pennsylva-

nia, constituting great part of what is now the counties of Philadelphia. Chester, Lancaster, York, Adams, Franklin, Bedford, Somerset, Fayette, and Greene. The Penns evidently were gainers by the agreement, and made no concession of territory. They certainly had the advantage of the Maryland proprietaries, in coolness and circumspection, and the disputes, however tedious, expensive, and irksome to them, must have been equally so to him. William Penn possessed, during his whole life, the advantage of Lord Baltimore in his favour at court. He was upon the most intimate footing with King James, so much so, indeed, as to have been currently suspected, as he says himself, of being a Jesuit. He had, as well as his father, Admiral Penn, not only rendered important personal services to that Prince, but inculcated the doctrine of passive obedience, and of rendering unto Cæsar the things that are Cæsar's; a doctrine so sweet and soothing to the royal ears of the house of Stewart. After the revolution, though William Penn was in disgrace at court, in the reign of King William, on account of his constancy to his unfortunate benefactor, yet Lord Baltimore was no less so, as being a Roman Catholic, and on account of some delay in proclaiming in his province the accession of the protestant dynasty, and was strongly threatened with deprivation of charter by *scire facias*. The claims of Penn during James's reign, were somewhat the cause of the crown; and in King William's time they were actually so, as the crown had then resumed the gov-

ernment of Pennsylvania and its territories. And in the reign of Queen Anne, as the British government were in treaty with the proprietary of Pennsylvania, for the entire purchase of his rights to his provinces, for the sum of 12,000 pounds, and had actually paid him 1000 pounds upon the strength of the negociation, the Lord Baltimore must have felt the pressure of his situation and the obvious advantage of his opponents; and despaired of ever seeing his pretensions finally successful.

All these untoward circumstances must have influenced the mind of the Lords Baltimore during the progress of the transaction, previous to the agreement of 1732; and induced them to recede from pretensions, which they had persisted in with sufficient pertinacity and violence, and which were abandoned subsequently with much reluctance, and many captious objections.

So far in the progress of those important negotiations, the Lords Baltimore may not be blameable to a great degree, but the transactions which transpired subsequently, and the many frivolous and captious objections, and unreasonable constructions attempted to be put upon their contract of 1732, by their agents, showed more a disposition to oppose and protract, than to promote the adjustment of their disputes agreeably to that instrument. Lord Baltimore, it is true, by his counsel, in the argument of the cause in Chancery, in England, which arose out of the agreement, disavowed their conduct, but at the same time, urged the invalidi-

ty of the agreement, on the ground of impositions on the part of the Penns, and his own ignorance of the nature of his rights.

Every obstacle seems to have been thrown in the way of carrying the agreement between the parties into operation, by Lord Baltimore and his agents, who manifested an anxious desire to evade its provisions.

The public records at Harrisburgh furnish no detail of what transpired between the commissioners, who met at New Castle, to run the lines as agreed upon, though the minutes of their transactions seems to have been voluminous, (Provincial Records, Vol. K. p. 354,) and what will be here stated of them, is taken from the articles of agreement entered into between Frederick, Lord Baltimore, and Thomas and Richard Penn, in 1760.

There are great deficiencies in the early public records of the provincial government. When the revolutionary war broke out, they were in the hands of their secretary, Joseph Shippen, who I have been informed, when they were peremptorily demanded by the Commonwealth, made a very reluctant and mutilated return, embracing only the books of the provincial records, and excluding all the loose documents of his office

The commissioners made little or no progress in effecting the object of their appointment, and were under the necessity of dispersing without coming to any definitive arrangements, Lord Baltimore's commissioners behaving, as Lord Hardwick after-

wards remarked, (1 Ves. 455,) with great chicanery through their whole negotiations.

One of the commissioners of the Penns arriving half an hour or so later than the period designated, the Maryland commissioners at first objected to proceeding, alleging that the contract was broken, and the £5000 penalty forfeited, and when that point was waived, they insisted that the semicircle around New Castle should be drawn with a *periphery*, and not a radius of twelve miles, thus shutting their eyes to the very words and manifest intention of what the Lord Chancellor declared to be the plainest part of the agreement. They made further difficulties about the *centre* of the semicircle around the town, (which it seems even in those early days covered a considerable extent of ground,) and refused to consider the true situation of Cape Henlopen to be where the proprietaries themselves had fixed it.

And Lord Baltimore, the year following, 1734, (Kilty's Landholder, p. 171,) in direct violation of his contract, presented a petition to his Majesty, praying for a confirmation of his charter, as made to his great grandfather, Cæcilius, the original patentee; but I believe it was not acted upon, probably on the ground, that as the boundaries had been settled by the parties themselves in their articles of agreement, the council had no authority to interfere, as their jurisdiction was confined to original unsettled conflicting chartered grants of colonial territory; and the consideration of his prayer was

postponed, to give the parties an opportunity of trying the validity or abandonment of their articles of agreement of 1732. by a judicial tribunal.

In 1735, John, Richard, and Thomas Penn, filed a bill in Chancery against Lord Baltimore, praying for a decree of specific performance of the articles ; which, from the death of John Penn, and the necessity of adding other parties, and the unconscionable delay incident to proceedings in that court, was not finally pronounced for sixteen years.

In the mean time, the quiet of the provinces continuing to be interrupted, and riots and disturbances occurring from the violence of Maryland pretensions, both parties applied in 1737, to the King's council, for some order which should lessen or allay these ferments. A decree was made, but not having been carried into operation was rescinded, and the claimants again appeared personally, and being heard by the council, the consideration of the subject was adjourned upon an intimation of the probability of an amicable arrangement. This was happily effected. It was agreed between the high contracting parties, "that all the vacant land not now possessed by, or under either of them, on the *east* side of Susquehannah river down as far as fifteen miles and a quarter south of the latitude of the most southern part of the city of Philadelphia ; and on the west side of Susquehannah, as far south as fourteen miles and three quarters south of the latitude of the most southern part of the city of Philadelphia, should be subject to the temporary and

provisional jurisdiction of Pennsylvania, and that to all vacant land not possessed by or under either, on both sides of the Susquehannah, south of the said temporary limits, should be subject to the jurisdiction of Maryland, until the boundaries should be finally settled, and that the provisionary and temporary limits, as thus established, should continue until the boundaries were finally settled, but to be without prejudice to either party. And when this convention was reported to the council, his Majesty was pleased to order, "that the proprietaries of the said respective provinces of Maryland and Pennsylvania, do cause the said agreement to be carried into execution, (Prov. Record, Vol. K. p. 61,)." The order was accordingly promulgated by proclamation in the provinces, and commissioners were the following year appointed to run the "temporary line:" Richard Peters and Lawrence Growden on the part of Pennsylvania, and Col. Levin Gale and Samuel Chamberlaine on that of Maryland. These commissioners commenced their active operations in the spring of 1739, and after proceeding as far as the eastern bank of the Susquehannah, were interrupted by the departure of Col. Gale, on account of death and sickness in his family, and the declaration of Mr. Chamberlaine, that he had no authority to continue operations without the attendance of his colleague. The Pennsylvania commissioners deeming their power to proceed confined to a united operation with those of Maryland, received further instructions to

proceed alone from governor Thomas. They, accordingly did so, and run the line westward of the Susquehannah, "to the most western of the Kit-tochtinny Hills," which now forms the western boundary of the county of Franklin. There is in the office of the Surveyor General at Harrisburgh, a copy of their minutes, and a beautiful manuscript coloured map of their route. The course run by these commissioners formed the famous "temporary line," so well known to the lawyers and settlers on the southern boundary of our Commonwealth, and in some measure allayed the turmoil of the provinces.

The cause in Chancery between the Penns and Lord Baltimore, was not decided until 1750. On the hearing, Lord Baltimore's counsel contended, that it could not be carried into effect, on account of its vagueness and uncertainty, and that the contract had been abandoned by the neglect of the Commissioners of Pennsylvania, to meet at the time appointed, and that the £5000 penalty was forfeited.

The Lord Chancellor, however, overcame all the objections urged in the argument, which occupied five days, and decreed a performance of the articles of agreement. He directed, that new commissioners should be appointed within three months after the decree, who should commence their operations in November following, (1 Ves. 453). He further ordered, that the centre of the semicircle should be fixed as near the centre of the town of

New Castle as may be, that it should be described with a radius of twelve English statute miles, "so that no part of the town should be further than that distance from the periphery, and that Cape Hinlopen should be taken to be situated as it was laid down in the chart accompanying the articles of agreement."

The commissioners were appointed agreeably to the decree, and met at New Castle on the 15th November 1750. They fixed upon the court house of New Castle as the centre for drawing the semicircle, but the captious chicanery of Lord Baltimore's commissioners conjured up a new and unexpected difficulty by insisting that the radii of the semicircle should be measured superficially without allowing for the inequalities of the ground, regardless of the absurd consequences resulting from such modes of measurement in creating inequality in the radii, and the consequent impossibility of describing any thing deserving the name of a semicircle. But, as the objection was persisted in, the proprietaries of Pennsylvania were again under the necessity of a further application to chancery, under the reservations in the former decree, and obtained in 1751, a decision in favour of horizontal measurement.

The commissioners again proceeding in their task, Charles Lord Baltimore died, but as the peace and happiness of the two provinces depended on the settlement of these protracted disputes, they did not on that account suspend their operations. Ha-

ving run the semicircle agreeably to the Lord Chancellor's decree with a radius of twelve English statute miles by horizontal admeasurement, and marked it on the ground they commenced their operations at Cape Henlopen.

Fixing the southern boundary of the three lower counties, (now the state of Delaware) at Fenwicks Island, requires explanation as the chart of the proprietaries, accompanying their agreement of 1732, gives to the cape opposite Cape May, at the mouth of the Delaware Bay, the name of Cape Cornelius, and the point at Fenwick's Island, that of Henlopen, and the maps of the present day transpose that order. The Swedes on their first arrival in 1672, landed at the *interior* cape, afterwards called Inlopen, and named it *Paradise Point* from its pleasant appearance; [Bozman's History of Maryland p. 244.] a fatiguing voyage giving I presume a liveliness to their feelings which the view of a sandy bluff under ordinary circumstances would not have produced. "This Cape," says Proud [1 Hist. Penn. 111.] "is frequently confounded with Cape Henlopen the interior or False Cape at Fenwick's Island, being written in the same manner and sometimes Henlopen. It was formerly called Cape Cornelius, and afterwards by William Penn, Cape James." Bozman [Hist. Maryland 244.] concludes that the confounding of the appellations arose from the addition of the aspirate, which in the Swedish language when prefixed to the word Inlopen, altered

the sense of it from the *interior* to the *exterior* Cape. It is probable that the Swedes might have called the interior Cape Inlopen, and the *exterior* Henlopen, and that when the Dutch encroached upon their neighbours in those parts they gave the name of Cornelius to the interior cape, leaving the former to its original appellation of Hinlopen. For it appears from Hamilton (MSS. notes of the testimony taken under the commissions issued to America in the chancery cause between the proprietaries,) that in early times "the cape on Fenwick's Island was called Henlopen," and that "South Cape twenty miles below the mouth of Delaware Bay was called Cape Hinlopen." One witness said that "False Cape was formerly called Hinlopen in his father's time, who was a pilot living fifteen miles below the mouth of Delaware Bay," and another, that he "had seen Dutch and English maps in which there were two capes laid down (published in 1672) to the south of the entrance into the Delaware Bay, and that the southernmost was called Cape Hinlopen, and the most northwardly lying at the south side of the entrance was called Cape Cornelius;" and Lord Hardwick in delivering his judgment already alluded to, said (1 Ves. 452.) "that it was clear by the proof that the true situation of Cape Henlopen was as laid down in the place accompanying the agreement, and not where Cape Cornelius is (i. e. then) as the defendant (Lord Baltimore) contended, which would leave out a great part of what was

intended to be included in the grant," meaning that of the duke of York to William Penn.

How the names of Henlopen and Cornelius became transposed as they are on the maps of the present day, I leave to those who are better acquainted with "modern antiquities;" but that they have changed positions since 1732, is not susceptible of contradiction.

As the Lord Chancellor had decided that Cape Henlopen should be taken to be where Cape Henlopen had been agreed to be nineteen years before, the ingenuity of the commissioners of Maryland could devise no further objections in that particular; and proceeding to operations in conjunction with those of Pennsylvania, they finally fixed a stone at 139 perches from the cape at Fenwick's Island "near four Mulberry trees," sculptured with the arms of Baltimore on the south, and those of Penn on the north, and proceeded to run the line across the peninsula, "and ascertain the exact middle" as a point from whence to run the northwardly line to form a tangent with the semicircle at New Castle. They then run the line between the two bays in the latitude of Cape Henlopen, (as agreed upon) until they reached the waters of Slaughter's creek, (not now laid down in the maps) a distance of 60 miles and $248\frac{1}{2}$ perches, when the fruitful inventions of the Maryland commissioners, alleging that as they had reached the waters running into the Chesapeake bay, they had run across the penin-

sula, agreeably to the spirit of the articles of agreement, and insisted upon stopping. The line however was continued till they passed through Taylor's and part of James's Islands, a distance of 69 miles and $298\frac{1}{2}$ perches, from bay to bay. But as the commissioners of Lord Baltimore refused to proceed to ascertain the middle of the peninsula, unless their computation was adopted, it became necessary for the Penns to file a supplemental bill in Chancery, against Frederick Lord Baltimore, to force him to adopt the line of 69 miles and $298\frac{1}{2}$ perches, as the distance across the peninsula, from bay to bay, and ascertain its exact middle, from whence the northwardly line should be run so as to form a tangent with the New Castle semicircle, and past it to the latitude of 15 English statute miles south of the most southern part of Philadelphia.

Whilst this bill was pending, Frederick Lord Baltimore, tired of the litigation and expense of the disputes, which he did not probably understand, as he was then young, and perhaps finding himself driven from every possible chance of further cavil, finally entered into articles of agreement with Thomas Penn and Richard Penn, in 1760, which at length effectually closed their protracted and vexatious altercations.

By this agreement it was covenanted, that the semicircle as already run should be adopted—that the distance across the peninsula in the latitude of Cape Henlopen, should be taken to have been rightly run, at 69 miles and $298\frac{1}{2}$ perches from the

stone pillar east of "the Mulberry tree, at Fenwick's Island," and marked with the arms of the contracting parties, that the middle of such line should be ascertained, and a stone pillar should be fixed at that point—that from such point a northwardly line should be run, whether the same should be due north or not, so as to form a tangent with the semicircle at New Castle, drawn with a radius of 12 English statute horizontal miles, from the court house in that place, and past the said point of contract further north till it reached the latitude of 15 miles south of the most southern part of Philadelphia—that the supplemental bill filed should be confessed, that all claim should be released to the territory, within those limits then to be ascertained, and that the Penns should appoint commissioners to run the lines as yet unfinished.

These articles of agreement of 1760, between Thomas Penn, Richard Penn, and Frederick Lord Baltimore, are well known to our courts of justice, and have been admitted in evidence without *proof*, as a state paper, with which they are presumed to be conversant. They were enrolled in Chancery in England, in pursuance of a decree of that court, found amongst the papers some years ago of Dr. Ross, (1. Binn. 399.) who had some connexions with the Penns as their agent. They are not to be found amongst the public documents of the commonwealth, but there was a copy of them taken by the Secretary of that office, from the original, brought there by Samuel Riddle, Esq. who was a

connexion of Dr. Ross's family, under an express written stipulation, that they should be re-delivered to him after they were copied, as private property. It is to be lamented, that the original was not filed, for though it has been admitted in our courts as evidence in cases of disputes, under conflicting Maryland and Pennsylvania land titles, yet if they should unfortunately be lost, the courts, I presume, would not admit the copy which was taken in a large unwieldy book, and much less the copy of a copy, unless an act of Assembly should be passed giving such copy, or copy of the copy, the character of legal evidence.

Jeremiah Dixon and Charles Mason were appointed to run the unfinished lines in 1761, and extended the western line between the two provinces, to the distance of two hundred and thirty miles, and marked for one hundred and thirty miles by stone pillars, thus putting a final termination to disputed territory between Maryland and Pennsylvania. This line was afterwards designated "Mason and Dixon's line," to distinguish it from "the temporary line," run in 1739, as already related. I have never been able to see the chart or or minutes of these latter surveys, as they are not amongst the public records of the Commonwealth of Pennsylvania.

These disputes and negotiations of the proprietaries of Maryland and Pennsylvania, are curious and interesting, as a portion of the early history of the state, and necessary and important to a proper

knowledge of the land titles within the disputed territory, the covenants respecting which, in the famous agreements of 1732 and 1760, it is foreign to this sketch to exhibit or explain. The whole history of these transactions, shows conclusively, the fairness and candour, the moderation and firmness of William Penn, the illustrious and irreproachable founder of Pennsylvania, and the justice of the claims of his posterity, and rescues his name from the imputation of injustice.

ORIGINAL LETTERS,

AND

DOCUMENTS

RELATING TO THE

HISTORY OF PENNSYLVANIA,

HITHERTO UNPUBLISHED

I. ORIGINAL LETTERS, &c.

[THE following letters are now first published from the originals, in the hand-writing of the illustrious Founder. The first three were addressed by him to an ancestor of the president of this Society, and were found among the papers of that ancestor. The earliest in date is interesting as it exhibits the modesty of William Penn in his opposition to the name proposed to be bestowed on the province, and in his ascribing the appellation entirely to the merits of his father, without arrogating any thing to himself. The second is no less creditable to the writer, since it shows the liberal principles of government which he entertained from the outset, but which on account of the well known sentiments of Charles II. and the duke of York, he deemed unfit for the atmosphere of a despotic and profligate court. "For the matters of liberty and privilege," says this upright law giver, "I purpose that which is extraordinary, and to

leave myself and successors no power of doing mischief; *that the will of one man may not hinder the good of an whole country*: but to publish those things now and here as matters stand, would not be wise," &c. In the third letter an important and hitherto unnoticed fact is mentioned, viz. his refusal of a sum—considerable at that time, and which to most persons would have appeared of sufficient amount—for a certain number of shares in the province, with the exclusive privilege to the company of the Indian trade; and if we are to understand by his expressions in the latter part of his letter, that his refusal of the offer was dictated by a desire to establish in Pennsylvania a model of free government, and honourable dealing with the Indians, "that an example and standard may be set up to the nations," we may see in it new evidence of his claims to the most profound gratitude and respect.

The remaining letters are of much later date, and shed light upon an obscure part of his history. The latest in the series is valuable from the circumstance of its having been, probably, the last letter written by him to America, since it appears from his memoirs, that in the month of May 1712, he was attacked by an apoplectic fit, and shortly afterwards by a second, which disabled him from correspondence.]

1. *To Robert Turner.*

5th of 1st Mo. 1681.

DEAR FRIEND,

My true love in the Lord salutes thee, and dear friends that love the Lord's precious truth in those parts. Thine I have, and for my business here, know that after many waitings, watchings, solicitings and disputes in council, this day my country was confirmed to me under the great seal of England, with large powers and privileges, by the name of *Pennsylvania*, a name the king would give it in honour of my father. I chose *New Wales*, being as this, a pretty hilly country, but *Penn* being Welsh for a *head*, as *Penmanmoire* in Wales, and *Penrith* in Cumberland, and *Penn* in Buckinghamshire, the highest land in England, called this *Pennsylvania*, which is the high or head woodlands; for I proposed when the secretary—a Welshman—refused to have it called New Wales, *Sylvania*, and they added *Penn* to it; and though I much opposed it, and went to the king to have it struck out and altered, he said 'twas past, and would take it upon him; nor could twenty guineas move the under secretaries to vary the name, for I feared least it should be lookt on as a vanity in me, and not as a respect in the king, as it truly was to my father, whom he often mentions with praise. Thou mayst communicate my graunt to friends, and expect shortly my proposals: 'tis a clear and just

thing, and my God that has given it me through many difficultys, will, I believe, bless and make it the seed of a nation. I shall have a tender care to the government, that it will be well laid at first: no more now, but dear love in the truth.

Thy true friend,

W. PENN.

2. *To the same and others.*

Westminster, 12th of 2d mo. 1681.

DEAR R. TURNER, ANT. SHARP, AND R. ROBERTS,

My love salutes you in the abideing truth of our God, that is precious in all lands; the Lord God of righteousness keep us in it, and then shall we be the dayly wittnesses of the comforts and refreshments that come from it, to his praise, that is the fountain of all good. Having published a paper with relation to my province in America, (at least what I thought it advisable to publish,) I here inclose one that you may know and inform others of it. I have been these thirteen years the servant of truth and Friends, and for my testimony sake lost much, not only the greatness and preferments of this world, but £16.000 of my estate, that had I not been what I am I had long agoe obtained; but I murmur not; the Lord is good to me, and the interest his truth has given me with his

people may more than repaire it: For many are drawn forth to be concerned with me and perhaps this way of satisfaction has more of the hand of God in it than a downright payment: this I can say, that I had an opening of joy as to these parts, in the year 1661, at Oxford, twenty years since; and as my understanding and inclinations have been much directed to observe and reprove mischiefs in governments, so it is now put into my power to settle one. For the matters of liberty and privilege, I purpose that which is extraordinary, and to leave myself and successors no power of doing mischief; that the will of one man may not hinder the good of an whole country; but to publish those things now, and here as matters stand, would not be wise, and I was advised to reserve that till I came there. Your ancient love to me, makes me believe you will have a brotherly eye to my honest concern; and what truth makes you free to do you will. and more I expect not: 'tis a clear, unintangled, and I may say, honourable bottom, no more; but let Friends know it as you are free. With my dear love in that which no waters can quench, nor time make wax old, nor distance wear out.

Your friend and brother,

WM. PENN.

'The inclosed was first read to Traders, Planters, and Shipmasters, that know those parts, and finally to the most eminent of Friends hereaway, and

so comes forth. I have forborne paint and allure-
ment, and writt truth. W. P.

There are several inhabitants on the place already able to yield accommodation to such as at first go; and care is taken already for to look out a convenient tract of land for a first settlement.

Endorsed—"William Penn, his advise about his country Pensilvania:—came with the printed Booke—

And how he is persuaded of it—and his inclination thereto longe past."

3. *To Robert Turner.*

25th 6th mo. 1681.

DEAR FRIEND,

My endeared love in the truth of God, that is sweet and patient, long suffering, and believes and hopes to the end, salutes thee and thy family, with faithful frends in those parts. Thy remembrance by severall notes, through the hands of J. Hall, I tenderly received; and though I ordered P. Ford to answer thy said letters, and send the things by thee desired, and writt and sent maps and accounts too, by Friend Thomas Lurting, I thought good to send thee a few lines. I have lately been in the

west of England, and had a prosperous journey in the Lord's service. At my returne found thynce to me. The most materiall is about the quit-rent, &c.: Philip will be large to thee upon it. I am contented to sell it to a Beaver Skin, which is about a crown value, at 10 years purchase. I did refuse a great temptation last 2d day, which was 6000 pounds, and pay the Indians, for six shares, and make the purchasers a company, to have wholly to itself the Indian trade from south to north, between the *Susquahanagh* and *Delaware* rivers, paying me $2\frac{1}{2}$ per cent. acknowledgment or rent: but as the Lord gave it me over all and great opposition, and that I never had my mind so exercised to the Lord about any outward substance, I would not abuse his love, nor act unworthy of his providence, and so defile what came to me clean. No, lett the Lord guide me by his wisdom, and preserve me to honour his name, and serve his truth and people, that an example and standard may be set up to the nations: there may be room there though none here. So dr. Robert take no notice of this. Thomas Lurting may guess the man: he knows him and spoke of him to me the last man upon the staires-head when he left me. No more at present, but that I am in the love of the Lord,

thy true friend,

WM. PENN.

Directed—"For Robert Turner,

Merchant in Dublin in Ireland."

Endorsed—"Wm. Penn adviseth that books or printed proposals, with maps, is sent by Thomas Lurtin; about Pensilvania; and that the quit-rent may be taken off at 10 years purchase, paying yearly in a beaver skin, &c. also that he was offered 6000 pounds for six shares."

"Thomas Lurtin says Samuel Groom spoke to Wm. Penn for the land, at the request of Thurston in Maryland."

4. *To James Logan*

London, 27th 3d mo. 1708.

LOVING FRIEND,

I shall have two oportunitys more, so only tell thee that Isaac Norris has two letters for thee. This is to cover some papers to thee to be used as occasion requires: two of them, being two ways of stating my case against the Fords; one an order of Council, though the originall must be there, directing the way of divideing the two provinces in King James's time, he striveing, I hope in vaine, to alter it. The last my case (or the Duke's rather) against Lord Baltimore, that will direct plainly how to understand my case and title. I had a letter from the Governor, the first in about a yeare; one from G. Owen, and one from T. Fairman. with one to P. Ford, open in mine. So far not amiss. But not one yet from thee. T. Gray inclosed them from Sheels by New Castle (where he lyes sick) to his

uncle, Charles Wright, my old acquaintance ; perhaps he keeps thy packet for my own hand from his. Remember the mines which the governor makes yet a secret, even to thee and all the world, but himself and Michell: pray penetrate that matter, and lett us see the oare, in as large a quantity as thou canst. This comes to thee by E. Jackson, and I hope an honest man, that may tell thee more. The Fords* insist upon 8, now friends are come up to 7000 pounds : 'tis like to be I hope compromised. We are all well through the Lord's mercy, and salute thee ; friends here to-night from Bristol, P. Moore, &c. Be penetrating and brisk, and tell friends of Jersey, that the Lords Commissioners for trade, &c. sent me a letter about Rivell, Leeds, &c. if fit for their Council, and at New York, which I have answered to day, I hope, to their content : 'Tis late, so I shall close, with dr. love to S. Carpenter, C. Pewsey, Gr. Owen, Rd. Hill, T. Story, R. Ellis, &c., who am

thy real frd.

WM. PENN.

Col. Rooth since my last has paid me 20 pounds.

* These were the executors of one Ford, his Steward, who by acts of "fraud and treachery," (to use the words of James Logan) involved him in great pecuniary troubles, which clouded the latter years of his life. "He trusted (says Oldmixon, in his account of the British Empire) an ungrateful agent too much with the management of the Province ; and when he expected to have been thousands of pounds the better for it, found himself thousands of pounds in debt," &c.

5. *To the Same.**Reding, 27th 12th mo. 1708—9.*

LOVING FRIEND,

Though I have writt many ways, and I think most amply and especially by Col. Gookin and Thomas Potts, yet haveing received thine of 7ber last, which is the last, I thought fit to let thee know that Michel has been with me, is a little cloudy, and would tell me what is good out of our province, and dubious of the vallue of what is within it, asyet; but promises faire. T. Grey as yet cannot make himself master of the papers thou hast twice writt about, comeing by N. Castle-upon-Tyne, sick, his chest in disorder still, but is positive that one sort of the papers thou hast every individual of them. I'll mind him of it again. But Col. Evans and his company of Indians, both T. G. and Michell declare can make 100 pounds, if not 2 or 3 pr. diem neat: Unhappy for me has that falling out been between you. But end it the best it may be. He writes of coming over, but let him be honourable there, or he may repent it here. He is a Silliton if he stir and does not pursue my last offer and advice by Col. Gookin. I heare Ld. Lovelace is well arrived, I hope so is your governor* too: make the most of him to friends and service. He had hints enough to follow theirs and thine, and was let

* Charles Gookin, Esq. appointed Governor by William Penn, a few months previously.

in to every secret of your affairs that occurred to me at his going. Give him measures of persons and things. He writes well, is a good mathematician, and I have desired him to keep a diary for his security, or at least prudent discharge.

Now these five things thou hast to balance against the turbulent and ungrateful :

1. That I keep my government.
2. I have sent a new lieutenant or deputy.
4. That I have recovered the province from the vilest of the earth,* and that danger over.
4. That I have sent the school charter.
5. That Ld. Baltimore laying hold of his province's address for settling our boundaries, petitioned the Queen, in order to it, to dismiss or repeal the order of Council in her father's time, and only run the line and leave the Lower Countys to him as his by his grant, which he got referred to the Lords for trade, &c. I appeared to them, told them they could not be proper judges, or shake a definitive order or sentence of King and Council, complained to Ld. President Sommers and Ld. Sunderland Secretary of State : They agreed with me, excused the inadvertency of the reference and concurred with me to petition the Queen, which I have done, setting forth the case, and the long quiet possession upon that determination and prayed to have so ill a precedent to American settle-

* Probably the Fords.

ments prevented, and his petition dismissed ; and so it was in high council. * * * * *

[The rest of this letter is unfortunately missing.]

6. *To Samuel Carpenter and others.*

Ruscomb Berks, 24 5th mo. 1712.

DEARE AND WORTHY FRIENDS.

Haveing so faire an opertunity, and having heard from you by the Bearer, John French, I chuse, by him to salute you and yours ; and all unnamed friends, that you think worthy. for my heart loves such and heartily salutes them and theirs, and prays for your preservation in the Lord's everlasting truth to the end of time ; and the way of it is, to take the Lord along with you in all your enterprises to give you right sight, true counsil, and a just temper or moderation in all things, you knowing right well the Lord our God is ncer at hand. Now know, that tho I have not actually sold my Govermt. to our truly Good Queen, yet her able Ld treasurer and I have agreed it, and that affaire of the Prizes, the Bearer came hither abt. is part of ye Queen's payment, viz, her one third ; and the other comes very opertunately, that belongs to me, which I hope J. Logan will take care of, in the utmost farthing, and remit it to me first. to whom I suppose, orders will goe

by this oportunity from ye treasury to yt effect. But I have taken effectuall care, yt all ye Laws and priviledges I have graunted to you, shall be observed by the Queen's Governors, &c: and that we who are friends shall be in a more particular manner regarded and treated by ye Queen. So that you will not, I hope and believe, have a less interest in the govermt. being humble and discreet in our conduct. and you will finde all the charters and Proprietary Govermts. annexed to the Crown by act of Parliament next winter; and perhaps Col. Quarry, if not J. Moore, may happen to be otherwise employed, notwithstanding the politick opinion of one of my officers in that Governmt. that is still for gaining them which I almost think impossible. But be that as it will, I purpose to see you if God give me life this fall, out I grow ould and infirme, yet would Gladly see you once more before I dye, and my young sons and daughter also, settled upon good Tracts of Land, for them and theirs' after them, to clear and settle upon, as Jacob's sons did. I close when I tell you that I desire fervent prayers to the Lord for continuing my life, that I may see pennsylvania once more, before I die, and that I am

your ffaithful Loving
friend

II. *The Will of William Penn with the Codicils, together with the opinion of Counsel thereon.*

[These papers with the subjoined letters of William Penn, junr. and of Simon Clement to James Logan, are printed from an old MS. in the possession of T. I. Wharton, Esq. said to be “taken from a copy belonging to the assembly.”]

I WILLIAM PENN, Esquire, so called, Chief Proprietary and Governor of the province of Pennsylvania, and the territories thereunto belonging, being of sound mind and understanding, for which I bless God, do make and ordain this my last will and testament. My eldest son being well provided for by a settlement of his mother's, and my father's estate, I give and dispose of the rest of my estate in manner following. The government of the province of Pennsylvania and territories thereunto belonging, and all powers relating thereunto, I give and devise to the most honourable the Earl of Oxford, and Earl Mortimer, and to Will. Earl Pawlet, so called and their heirs, upon trust to dispose thereof to the Queen or any other person to

the best advantage and profit they can, to be applied in such manner as I shall herein after direct.

I give and devise to my dear wife Hannah Penn, and her father Thomas Callowhill, and to my good friends Margaret Lowther my dear sister, and to Gilbert Heathcott, Physition, Samuel Waldenfield, John Field, Henry Goldney, all living in England, and to my friends Samuel Carpenter, Richard Hill, Isaac Norris, Samuel Preston, and James Logan, living in or near Pennsylvania, and their heirs, all my lands, tenements, and hereditaments whatsoever, rents and other profits situate, lying and being in Pennsylvania, and the territories thereunto belonging or elsewhere in America, upon trust that they shall sell and dispose of so much thereof as shall be sufficient to pay all my just debts, and from and after payment thereof, shall convey unto each of the three children of my son William Penn, Gulielma Maria, Springet, and William respectively, and to their respective heirs 10,000 acres of land in some proper and beneficial places to be set out by my trustees aforesaid.

All the rest of my lands and hereditaments, whatsoever situate lying and being in America, I will that my trustees shall convey to and amongst my children, which I have by my present wife, in such proportions, and for such estates as my said wife shall think fit. But before such conveyances shall be made to my said children, I will that my said trustees shall convey to my daughter *Aubry*, whom I omitted to name before, 10,000 acres of my said

lands in such places as my said trustees shall think fit.

All my personal estate in Pennsylvania and elsewhere, and arrears of rent due there, I give to my said dear wife (whom I make my sole executrix,) for the equal benefit of her and her children.

In testimony whereof I have set my hand and seal, to this my will, which I declare to be my last will, revoking all others formerly made by me

WM. PENN

Signed sealed and published by the testator William Penn, in the presence of us who set our names as witnesses thereof in the presence of the said testator after the interlineation of the words above, vizt. (*whom I make my sole Executrix,*) Robert West, Sarah West, Susanna Reading, Thomas Pyle, Robert Lomax.

This will I made when ill of a fever at London, with a clear understanding of what I did then. But because of some unworthy expressions belying God's goodness to me as if I knew not what I did I do now that I am recovered through God's goodness, hereby declare it is my last will and testament at Ruscomb in Berkshire this 27th of the 3d mo. called May 1712.

WM. PENN.

Witnesses present, Elizabeth Penn, Thomas

Pyle, Thomas Penn, Elizabeth Anderson, Mary Chandler, Jonah Dee, Mary Dee.

Postscript in my own hand—As a further testimony of my love to my dear wife, I of my own mind give unto her out of the rents of America, vizt. Pennsylvania, &c. 300 pounds a year for her natural life, and for her care and charge over my children in their education of which she knows my mind as also that I desire they may settle at least in good part in America, where I leave them so good an interest to be for their inheritance from generation to generation, which the Lord preserve and prosper. Amen.

WM. PENN.

[Here follows the Probate made 3d November 1718.]

The Case of William Penn, Esq.

King Charles the 2d, by his Letters Patent, dated 1680, grants to William Penn, Esq. his heirs and assigns, a tract of land in America, with all the Islands therein contained, &c. as the same is therein described, whom he creates and constitutes true and absolute Proprietarys of the said county and premises, saving to his Majesty, his heirs and successors, their allegiance, and also, the sovereignty of the said country: To hold to the said William Penn, his heirs and assigns, to the only use and behoof of him and them forever: To be holden of his

Majesty, his heirs and successors, Kings of England, as of their Castle of Windsor, in free and common Socage by Fealty, only, and not in Capite, or in Knights service : yielding and paying two Beaver Skins yearly, and the 5th part of all Gold and Silver Ore, clear of all charges : Erects the said country into a province or seignory, by the name of Pensilvania. With power to the said William Penn and his heirs, and to his and their deputies and lieutenants, for the good government of the said countrys, to ordain laws, &c. &c. by and with the advice of the Assembly, &c. &c. (reciting other powers.)

The said William Penn died about July, 1718, leaving his last will and testament, attested by six witnesses, viz :

[Here follows a true copy of the will and codicil.]

Questions.

1. Is the Devise of the Government of Pensilvania to the two trustee Earls good ; and if good, to whom doth the benefit of the trust belong.

2. Is the Devise of the Lands, &c. in Pensilvania to Hannah Penn, and the other Trustees good.

The devise of the government, &c. of Pensilvania, made by the testator Mr. Penn to the Earl of Oxford and Earl Powlet, seems to be to compleat a treaty

which he was at that time making with the Crown, whereby he was to have a considerable sum of money for the government; and the testator seems likewise to make a particular disposition of that money by his will, but it is plain he made none. The occasion of which may be, that the will was made in a hurry, and in the time of a desperate illness, as appears by the codicil. I am, therefore, of opinion, that the two Earls are trustees only for the heir at law, upon whom the government would devolve in case there had been no will. But as to the lands devised to the widow and her co-trustees in case the will be well proved, I take it to be a good devise, unless these lands or some quit-rents out of them be inseparably annexed to the government; and then such annexed lands or quit-rents will go with the government.

JO. HUNGERFORD.

31 Jan 1718.

Questions

1. Is the devise of the Government of Pensilvania to the two trustee Earls good; and if good, to whom doth the benefit of the trust belong.
2. Is the devise of the Lands, &c. to Hannah Penn and other trustees good.

I conceive the devise of the Government to the trustees and their heirs to be good, and the same

to be in trust for the heir of the devisee, and that the devise of the lands to Hannah Penn and the other trustees is also good.

FRA. ANNESLEY.

29 Jan. 1718.

Questions—Same as above.

Upon perusing a copy of the Letters Patent, I am of opinion, that the Government thereby granted to Wm. Penn and his heirs, doth consist in the privileges and jurisdictions to them also thereby granted.

2. That the said government, privileges and jurisdictions, are thereby inseparably annexed to the real and predial propriety of the said province and seigniorie.

3. And therefore, as to the will, I take it, that the devise of the Government is void : the testator plainly intending thereby to sever it from the dominion of the land.

4. That for the same reason the devise of the land in Pensilvania to Hannah and the other trustees, is also void : the plain intent being to alien the propriety distinct and apart from the Government, which agrees not, as I think, with the law and such Seignories.

5. If the devise of the Government shall be deemed good, yet the same being in trust to be disposed of for the best advantage to be apply'd as the testator should afterwards by the will di-

rect, and there being no such direction in the will, nor any express devise or bequest to William Penn, the testator's heir at law, I conceive the said trust descends to him, and that he ought to have the advantage thereof.

G. SAVAGE.

24th Sept. 1718.

III. Instructions from William Penn, Jr. to Gov. Keith.

Instructions to William Keith, Esq. Lieutenant Governor and Commander in Chief of the Province of Pensilvania and counties of New Castle, Kent, and Sussex, upon Delaware.

You are upon receiving these instructions immediately to call together the Council, and with them in the most public manner make known my accession to the government of the said province and counties, and assure the country of my great affection to them, and hearty wishes for their welfare, and that I shall always look upon their interest as my own. And I believe on this occasion it will be proper to read the late King Charles the Second's Letters patent to my late father, and their proprietor, and his heirs, publickly to the people. However this I leave wholly to your's and the Council's prudence to do therein as may be thought most convenient, and for the honour of the Government.

I think it would be well done if the present mem-

bers of Council be continued, for I would not have more alterations made in Government upon my accessions thereto than what are absolutely necessary.

If you can procure a militia to be settled by law, slip not the occasion of doing it. But as that country was chiefly at first settled by Quakers, I would not have them oppressed on any account.

Protect the people under your care in all their Rights, Privileges and Liberties, my father granted them by charter or otherwise, or that they ought to enjoy as Englishmen.

Observe the law for liberty of conscience, which I take to be a fundamental one in Pensilvania ; and was one great encouragement for the Quakers to transport themselves thither, and to make it what it now is, for which they merit the favour of my family, as well as on many other accounts, and shall always have it when in my power ; and this I desire you will let that people know.

But as I profess myself to be a member of the church of England, therefore I recommend it to you to be careful of her interest, and that you encourage and protect the clergy, and employ where you can, deserving members of that communion ; for I think they ought to have at least an equal share in the administration and public offices with their neighbours ; and discountenance all Anti-Trinitarians and Libertines.

Protect in their possessions such Strangers as are settled amongst us ; for the public faith is concerned in it.

Let the law be your guide in all cases ; and protect the officers of the Customs in the discharge of their duty and use the advice of the Council in all cases of importance.

Given under my hand and seal the 14th day of January in the year of our Lord 1718.

WM. PENN.

[Here follows the Commission to Governor Keith.]

IV. Letters from Simon Clements (Uncle to the Widow of William Penn) to James Logan.

London, 30th December, 1718.

SIR,

Coming into the City this morning, my cousin Goldney tells me a Ship is just parting for New York, and that I should lose the opportunity of writing by her if I did not do it immediately. I would not therefore omit this occasion of letting you know that your letters with the copy of the act of Parliament came safe to my hands about a week since, but having sent them to my niece for her perusal, I am not now able to answer them in so particular a manner as I ought, and therefore must defer it till the next occasion. In the meantime I am very glad to find that you had so prudently provided for the succession of the government of the province before the late Governor's decease as that the country can receive no prejudice for want of renewing the present Governor's commission which

has been delayed principally by reason of Mr. Penn's at first obstructing the proving his father's Will in the Prerogative Court, which however he has since consented to and 'tis done, and I have a duplicate of it ready which I choose rather to send you by some ship that goes directly for your place than by this conveyance.

We are now also upon proving the will in Chancery, but there are some disputes yet subsisting between the young gentleman and his mother-in-law, which they have mutually promised shall be settled by an amicable bill in Chancery, and until some few points are agreed between them which are in agitation, he delays giving his answer to the bill we have brought for proving the will, but as I have said before, there is no appearance but that all their differences will be adjusted in a friendly manner; and my neice will take the best advice she can for putting the management of the propriety into such a method, as that the trustees may act with ease and safety; and soon as conveniently, may be we shall endeavour to get the governor's commission renewed in due form.

I desired you in my first letter to transmit as exact an account as you could of the quit-rents and other revenues of the proprietary, and of what debts remain unpaid, &c. of which you have not been pleased to take any notice in your answer. Wherefore I must renew my request to you on that head, it being highly necessary at the time that those matters should be well understood. But above

all, I must pray you to let me have by the first opportunity such an account of what the profits accruing to the governors, (besides the gifts of the assembly,) do amount to, *communibus annis*, as I may vouch and stand by, if there be occasion when I come to treat with the Ministers upon making good the contract for sale of the government, which I hope we may bring them to at long run. I am truly glad to find that your governor manages so much to the satisfaction of the people, and that that scandalous letter I hinted to you merited no more credit than we gave it. I have no more to add at present, but that I am truly your assured friend and humble servant.

SIMON CLEMENTS.

Per the Samuel ; Samuel Holmes, }
 Master for New York. }

The same to the same.

London, March 6, 1718—19.

SIR,

The foregoing is a copy of what I writ you by way of New York, and I am now reviewing your two letters of the 1st and 4th of 9ber, that I may be more particular in my answer thereto than I could at that time, for want of having them by me.

I am sorry to observe, that the affairs of the lower counties lie in so unsettled a posture, for which I see no remedy, but to wait with patience 'till we can find a favourable opportunity to move the Ministers to take some effectual resolutions for the adjusting all those dependencies. In order to which, I have long since formed a scheme, which I hope may prove acceptable to them; but their time and thoughts have been, and still continue to be so much taken up in the many incidents that have happened in the publick affairs, that it would be in vain to make any application to them in these matters till they are more at leisure to hearken to them. In the mean time, we have the satisfaction to see that they show no disposition to gratify the Scotch pretensions which have been suspended this long time, and they have not been able with all their interest to get the Attorney General's report read in Council, though they have had it above a year and a half. I am glad to hear that your governor had come to some good understanding, at least for the present with Col. Hart, for quieting the contests touching the limits of Maryland. I was told that the young Lord Baltimore had determined to let that matter rest till he comes of age, and then I hope to find means to accommodate it with him, by the interposition of some friends to both sides; and the solid arguments for the support of my niece's interests, which you sent over some time since, and which I have read with a great deal of satisfaction, will abundantly instruct her friends in all that may be

requisite for the management of that affair. I have very little acquaintance with Col. Gookin, and know as little of his conversation and pretensions. But whatsoever his inclinations may be, I believe neither you nor we have any thing to apprehend from what he can do. You fear, I perceive, that the proprietors choice of trustees may prove to the prejudice of his family, but you know that at least, at that time, they were the fittest that could be thought on ; and though they are since grown a little out of fashion, the using their names on this occasion can give no offence to those now in play. Great men lay no stress on such little things. I prepared a draught of a commission for those Lords to confirm your governor, by the authority devolved upon them, which I left several weeks since with Lord Oxford, to peruse and communicate to Lord Powlet, but I cant yet get him to dispatch it. And you know we cannot be as pressing on men of their degree, as we might on those of our own rank, but I shall continue my solicitation in it as I can find opportunity.

In the mean time I am glad that your own happy precaution has prevented the inconveniences that might have arisen from such delays which we were not able to remedy. The proprietor's will may indeed be said to have been made in haste as you guess : But it was dictated by his friend Mr. West, though the blunders committed therein could not have been expected from a man of his accuracy. The truth is that he himself had la-

boured under a paralytick affection, from which he never recovered the use of his limbs on one side, nor I believe at that time the strength of his capacity, though it were afterwards perfectly restored, and continued to the time of his death about six months since. But for the settling all things right my niece is, as I told you in my last, proceeding to get the will proved in chancery, and then she will be empowered to fix such trustees, as may effectually act in her affairs. In the mean it is happy that the trustees of the mortgage are sufficiently authorised to manage all that is requisite there; and though I am pleased to see that you have made some handsome remittances towards the lessening that debt, yet I can't think so well of the retaining the one half of the money received for the lands sold Mr. Dickinson touching which I writ you in my first letter, though you have not been pleased to say any thing of it in your answer, I hope, however, the persons concerned will consider that all the power they have to sell lands is from the mortgagees, and that 'tis to them they must be accountable for the produce who alone, but nobody else, can discharge them. 'Tis plain also that the present Mr. William Penn can have no just pretensions to any thing there but what had been actually settled upon him by his father and certainly they must believe that those lands were not, or else they would never have presumed to sell them. I should therefore think that they would find themselves obliged to remit the remaining part of the money to the mortgagees and

leave it to us to dispute any pretensions thereon (for which I am yet well satisfied there can be no ground) that may be made here and which can in no wise affect them.

My niece and her son-in-law met several times whilst they were both in town, and mutually declared themselves desirous to cultivate the former friendship in the family, and to submit all their differences to be decided by a decree in the Court of Chancery, to be obtained with as little expense and contest as possible, and I believe they will take that way at last, though the young gentleman seems fickle and unconstant and has been ready to fly out once or twice since, and is gone again to France without putting in his answer to the bill for proving the will, which must therefore be at a stand till his return which he pretends shall be in this or the next month. His agents talk as if he believes the will has not sufficiently conveyed the power of government from him and that he will send over a governor. But I should think either he has more discretion than to offer it in earnest, or that he would not find any body fool enough to go on such an errand; at least I am confident that your governor will never yield up his authentick authority to any person who should come up with a sham one.

You need not doubt but that the lower counties are as effectually devised as the upper, for if the word "*Territories*," should not be thought sufficient to define, the addition "or elsewhere in America," cannot fail to comprehend them, which you will find to be the words of the will, the office copy or

probate whereof Mr. Page sends you over to keep by you.

I am truly glad to hear that the governor's good conduct has gained so much upon the affection of your people which was what I expected from that observation which I had the opportunity to make of his prudence and temper in that little of his conversation which I had the honour to have (which I think was but twice;) and having now written to you all that at present occurs to me in relation to my nieces affairs, I think it would be needless for me to give him the trouble of a letter only with the bare (though true) compliment that his good management will always engage me to employ my best services for his interest.

Your letters will always be very acceptable to me, and though the distance I live at hinders me from knowing the times when ships are departing and therefore you may find me not to be as punctual a correspondent, yet I shall take the liberty to write you sometimes as matters may offer for my niece's service; and if there be any thing wherein I could be serviceable to yourself you may always freely command,

Sir, Your assured Friend
and very Hble Servant
S. CLEMENT.

Mr. Page has given me the Probate
of the Will; so it comes inclosed
herewith.

[Here follows a copy of the probate of the will.]

2 d. 5. 1

MEMOIRS, &c.

Papers relative to the Valedictory Address of President Washington.

AT a meeting of "*The Historical Society of Pennsylvania*," held this 6th day of February, 1826,

A communication was read by the President upon the subject of the Valedictory Address of President Washington,—

Whereupon,

Resolved, That the communication of the President be referred to a committee, with instructions to make such further enquiries as they may deem expedient and find practicable.

And the President, and Mr. Morgan and Mr. Ingersoll, were appointed the committee.

From the Minutes.

T. M. PETTIT, *Recording Secretary.*

Report of the Committee.

THE committee charged to make such enquiries as they might deem expedient and find practicable in relation to the Valedictory Address of President Washington, beg leave to report—

That in the execution of this duty they have felt all the interest which the subject has excited among so many of our fellow-citizens. Although the merits of this illustrious man would be very little impaired by the discovery that he had made use of the hand of another to reduce his own thoughts and reflections to writing, yet when the effort appears to be to ascribe to some other the merit of these thoughts and the sense of the utility of their publication, and thus to render George Washington a mere secondary character, a warmth of feeling among those who loved and revered him has been unavoidably excited, and may be reasonably excused.

The committee have troubled Mr. Jay, Chief Justice Marshall, Judge Peters, and Judge Washington, with enquiries. The answers which have been kindly returned, with permission to make them public, must remove all doubts on the subject. The facts stated in Mr. Jay's letter to Judge Peters well account for the *mistake* which has accompanied this question. The whole address appears to have been copied by General Hamilton, whose affectionate attachment to the President prevented him from thinking any trouble on his account too great; and this

copy having, we know not how, returned to his possession, was probably the cause of the opinion that he was the original author. His unexpected and lamented death prevents that personal denial of his asserted agency which we should undoubtedly have received if the report had been circulated during his lifetime. The national loss sustained in regard to both is sufficiently heavy. It requires not to be rendered more distressing by attempts to convict one of intellectual deficiency, and the other of confidence betrayed.

The certificate from Mr. Claypoole, with the short confirmatory note of the President of this Society, will not, it is conceived, be improper additions to the publication of the foregoing letters.

W. RAWLE,
BENJ'N. R. MORGAN.
C. J. INGERSOLL.

Letter from the Committee.

SIR,

The interest which has lately been taken by so many in the question whether the Valedictory Address of the venerable Washington was his own composition or the work of another, has extended to the Historical Society of Pennsylvania, which has appointed us to make enquiries on the subject.

We take the liberty of applying, among others, to you, sir, and request you to favour us with any

information in your possession not improper for publication.

We are, &c.

(Signed,) W. RAWLE,
 BENJAMIN R. MORGAN,
 CHARLES J. INGERSOLL.

Philada. Feb. 10, 1826.

A copy of the above was addressed to Judge WASHINGTON, Judge PETERS, Chief Justice MARSHALL, JOHN JAY, Esq. and RUFUS KING, Esq.

The following answers have been received. The indisposition of Mr. King has probably been the cause of no answer being returned by him.

Washington, Feb. 23, 1826.

GENTLEMEN,

In answer to your letter, requesting such information on the subject of the Valedictory Address which was published in 1796, with the signature of George Washington, as it may be in my power to give, I beg leave to state, that the papers bequeathed to me, so far as I have examined them, afford no ground whatever for attributing the composition of that paper to any other than the person whose signature it bears. I have heard that a claim to the authorship of it, by another person, has been assert-

ed, but I am unacquainted with the precise ground upon which it is founded.

I am, very respectfully, gentlemen,

Your most obedient servant,

BUSH. WASHINGTON.

Washington, Feb. 22d. 1826.

GENTLEMEN,

I have been honoured with your letter of the 15th inst. enquiring whether I have any materials to furnish, or testimony to afford, respecting the Valedictory Address of General Washington, or the doubts which have been raised on the subject of its authorship.

I have no information on the claims which have been made for others to the composition of this address, nor do I know any thing, except from public report, which is not in the correspondence that was placed in my hands. I have seen nothing there to induce a suspicion that it was written by any other than its avowed author.

With great respect,

I am, gentlemen, your obedient,

J. MARSHALL.

Bedford, 21st. Feb. 1826.

GENTLEMEN,

I received on the 18th of this month, the letter, which you were pleased to address to me on the

10th inst. That letter suggests, that "the interest
"which has lately been taken by so many in the
"question, whether the Valedictory Address of the
"venerable Washington, was his own composition
"or the work of another, has extended to the His-
"torical Society of Pennsylvania, which has ap-
"pointed you a committee to make enquiries on the
"subject." You therefore request, that I will favour
you "with any information in my possession, not
"improper for publication." To this request, propri-
ety requires from me a candid and explicit answer.

The first intelligence I had, relative to the *ques-
tion* to which you allude, was in the year 1811. In
the course of my familiar correspondence with my
worthy and excellent friend Judge Peters, I did on
the 29th of March, 1811, write a letter to that gen-
tleman, containing certain remarks and facts, con-
nected with that *question*.

I therefore take the liberty to refer you to Judge
Peters, who will readily communicate to you the
contents of that letter. Permit me to add, that
should any copies be taken, it is my desire that
they may be copies of the *whole*, and not merely
of *parts* of the letter.

I have the honour to be, gentlemen,

Your most obedient servant,

JOHN JAY.

W. RAWLE,
BENJAMIN R. MORGAN, } Esquires,
C. J. INGERSOLL,

*Committee of the Historical Society
of Pennsylvania.*

Belmont, Feb. 19, 1826.

MY DEAR SIR,

I thought it most prudent to avoid encountering the bad weather to-day, and have ordered the Court to be adjourned to Friday, by the Marshal.

I will immediately write to my friend Jay, and inform him of your request in relation to his letters respecting General Washington's Farewell Address. I cannot deliver his letters to any one without his permission.

It is a strange pursuit in Hamilton's family, thus to give trouble to every body who regards the fame of either the General or Col. H. himself. If he had written the Address, it is perfidy to betray the confidence reposed in him. But as he did not, it is wrong in his family to assert his having done it. In either case his descendants would gain no reputation; but our nation would suffer a serious injury, by having the fascinating name of *Washington* taken from the creed of every friend to his country.

Yours, most affectionately,

RICHARD PETERS.

W. RAWLE, Esq.

*Bedford, West-Chester County, N. York,
3d March, 1826.*

MY GOOD FRIEND,

I had the pleasure of receiving, on Saturday last, your letter of the 21st of February. It gratified me

2 H

to learn from it, that you was in excellent health, and I hope that a kind Providence will continue to promote your prosperity.

The communications which had occurred between you and the committee of the Historical Society of Pennsylvania, were interesting. In a letter from them of the 10th ult. they expressed a desire to obtain from me any information in my possession, not improper for publication. I answered it on the 24th, and referred to the contents of my letter to you of the 24th of March, 1811. Should any copies be taken, I hope they will be taken in the whole, and not of only parts of that letter. As to publication, you and those gentlemen can, with more facility than I can, consider and conclude on that head.

I regret leaving so much blank paper in this letter—but so it is—from early in the summer to this time, my long-continued sickness and debility have become so increased, that writing soon produces weariness. I cannot, however, forbear adding my assurances of the constant esteem, regard and attachment, with which I am,

Dear sir,

Your affectionate friend,

JOHN JAY.

The Hon. RICHARD PETERS, Esq.

(COPY.)

Bedford, March 29th, 1811.

DEAR SIR,

I have received your letter of the 14th ult. and also the book on Plaister of Paris, which you was so obliging as to send me, and for which accept my thanks.

Your letter conveyed to me the first, and only information I have received, that a copy of President Washington's Valedictory Address had been found among the papers of General Hamilton, and in *his* handwriting; and that a certain gentleman had also a copy of it, in the *same* handwriting.

This intelligence is unpleasant and unexpected. Had the address been one of those *official* papers which, in the course of affairs, the Secretary of the proper department might have prepared, and the President have signed, these facts would have been unimportant; but it was a *personal* act, of choice, not of official duty, and it was so connected with other obvious considerations as that he only could with propriety write it. In my opinion President Washington must have been sensible of this propriety, and therefore strong evidence would be necessary to make me believe that he violated it. Whether he did or did not, is a question which naturally directs our attention to whatever affords presumptive evidence respecting it, and leads the mind into a long train of correspondent reflections. I will give you a summary of those which have oc-

curred to me; not because I think them necessary to settle the point in question, for the sequel will show that they are not, but because the occasion invites me to take the pleasure of reviewing and bearing testimony to the merits of our departed friend.

Is it to be presumed from these facts that General Hamilton was the *real*, and the President only the *reputed* author of that address? Although they countenance such a presumption, yet I think its foundation will be found too slight and shallow, to resist that strong and full stream of counter-evidence which flows from the conduct and character of that great man; a character not blown up into transient splendour by the breath of adulation, but which, being composed of his great and memorable deeds, stands, and will forever stand a glorious monument of human excellence.

So prone, however, is "poor human nature" to dislike and depreciate the superiority of its cotemporaries, that when these facts come to be generally known, (and generally known they will be,) many with affected regret and hesitation will infer and hint that Washington had less greatness of talent, and less greatness of mind, than his friends and admirers ascribed to him. Nor will the number of those be few, who, from personal or party inducements, will artfully encourage and diligently endeavour to give currency to such imputations. On the other hand, there are men of candour and judgment, (and time will increase their number,) who, aiming only at truth, will cheerfully trace and follow its

footsteps, and on finding, gladly embrace it. Urged by this laudable motive, they will attentively examine the history of his life; and in it they will meet with such numerous proofs of his knowledge and experience of men, and things in general, and of our national affairs in particular, as to silence all doubts of his ability to conceive and express every idea in that address. A careful perusal of that history will convince them that the principles of policy which it recommends as rules for the conduct of others, are precisely those by which he regulated his own.

There have been in the world but two systems or schools of policy, the one founded on the great principles of wisdom and rectitude, the other on cunning, and its various artifices. To the first of these belonged Washington, and all the other worthies of every country who ascended to the Temple of Honour through the Temple of Virtue. The doctrines, maxims, and precepts of this school have been explained and inculcated by the ablest writers, ancient and modern. In all civilized countries they are known, though often neglected; and in free states have always been publicly commended and taught: they crossed the Atlantic with our forefathers, and in our days particularly have not only engaged the time and attention of students, but have been constantly and eloquently displayed by able men in our senates and assemblies. What reason can there be to suppose that Washington did not understand those subjects? If it be asked what these subjects

comprehend or relate to, the answer is this,—they relate to the nature and duties of man, to his propensities and passions, his virtues and vices, his habits and prejudices, his real and relative wants and enjoyments, his capacities for social and national happiness, and the means by which, according to time, place, and other existing circumstances, it is in a greater or less degree to be procured, preserved and encreased. From a profound investigation of these subjects, enlightened by experience, result all that knowledge and those maxims and precepts of sound policy, which enable legislators and rulers to manage and govern public affairs wisely and justly.

By what other means than the practical use of this knowledge, could Washington have been able to lead and govern an army hastily collected from various parts, and who brought with them to the field all the license and all the habits which they had indulged at home? Could he by the force of orders and proclamations, have constrained them to render to him that obedience, confidence, and warm attachment which he soon acquired, and which, throughout all vicissitudes and distresses, continued constant and undiminished to the last? By what other means could he have been able to frustrate the designs of dark cabals, and the unceasing intrigues of envious competitors, and the arts of the opposing enemy? By what other means could he have been able in so masterly a manner to meet and manage all those perplexing embarrassments which the revo-

lutionary substitution of a new government,—which the want of that power in congress which they had not, and of that promptitude which no deliberative body can have,—which the frequent destitution and constant uncertainty of essential supplies,—which the incompetency of individuals on whom much depended, the perfidy of others, and the mismanagement of many, could not fail to engender? We know, and history will inform posterity, that, from the first of his military career, he had to meet and encounter, and surmount a rapid succession of formidable difficulties, even down to the time when his country was enabled, by the success of their arms, to obtain the honourable peace which terminated the war. His high and appointed course being then finished, he disdained the intimations of lawless ambition to prolong it. He disbanded the army under circumstances which required no common degree of policy or virtue; and with universal admiration and plaudits, descended, joyfully and serenely, into the shades of retirement. They who ascribe all this to the guidance and protection of Providence do well, but let them recollect that Providence seldom interposes in human affairs, but through the agency of human means.

When at a subsequent and alarming period, the nation found that their affairs had gone into confusion, and that clouds portending danger and distress were rising over them in every quarter, they instituted under his auspices a more efficient government, and unanimously committed the administra-

tion of it to him. Would they have done this without the highest confidence in his political talents and wisdom? Certainly not—no novice in navigation was ever unanimously called upon to take the helm or command of a ship on the point of running aground among the breakers. This universal confidence would have proved a universal mistake, had it not been justified by the event. The unanimous opinion entertained and declared by a whole people in favour of any fellow citizen is rarely erroneous, especially in times of alarm and calamity.

To delineate the course, and enumerate the measures which he took to arrive at success, would be to write a volume. The firmness and policy with which he overcame the obstacles placed in his way by the derangement of national affairs, by the devices of domestic demagogues and of foreign agents, as well as by the deleterious influences of the French revolution, need not be particularized. Our records, and histories, and memories, render it unnecessary. It is sufficient to say, and it can be said with truth, that his administration raised the nation out of confusion into order, out of degradation and distress into reputation and prosperity: it found us withering; it left us flourishing.

Is it to be believed that after having thus led the nation out of a bewildered state, and guided them for many years from one degree of prosperity to another, he was not qualified, on retiring, to advise them how to proceed and go on? And what but this is the object and the burthen of his Valedictory

Address? He was persuaded that, as the national welfare had been recovered and established, so it could only be preserved and prolonged by a continued and steady adherence to those principles of sound policy and impartial justice which had invariably directed his administration.

Although the knowledge of them had been spread and scattered among the people, here a little, and there a little, yet being desirous to mark even the last day of his public life by some act of public utility, he addressed and presented them to his fellow-citizens in points of light so clear and strong as to make deep impressions on the public mind. These last parental admonitions of this Father of his Country were gratefully received and universally admired; but the experience of ages informs us, that it is less difficult to give good advice than to prevail on men to follow it.

Such, and so obvious is the force of the preceding considerations, as to render doubts of the President's ability to give the advice contained in the address too absurd to have many serious advocates. But it would not surprise me, if certain classical gentlemen, associating the facts you mention with the style and fashion of the address, should intimate that his ability to compose it substantially in his mind does not prove that he was also capable of communicating his advice in a paper so well written. Let these gentlemen recollect the classical maxim which they learned at school:

“Scribendi recte, sapere est, et fons.”

They may also be referred to another classical maxim, which teaches us that they who well understand their subject, will be at no loss for words:

“Verbaque provisam rem non invita sequentur.”

But his ability to write well need not be proved by the application of maxims, it is established by facts.

We are told to judge of a tree by its fruit; let us in like manner judge of his pen by its performances. Few men who had so little leisure have written so much. His *public* letters alone are voluminous, and public opinion has done justice to their merits. Many of them have been published, and they who read them will be convinced that at the period of the address he had not to learn how to write well. But it may be remarked that the address is more highly finished than the letters, and so it ought to be; that address was to be presented to the whole nation, and on no common occasion; it was intended for the present and future generations; it was to be read in this country and in foreign countries; and to be criticised not only by affectionate friends and impartial judges, but also by envious and malignant enemies. It was an address which, according as it should or should not correspond with his exalted character and fame, would either justify or impeach the prevailing opinion of his talents or wisdom. Who, therefore, can wonder that he should bestow more thought, and time, and pains, on that address, than on a letter?

Although in the habit of depending ultimately on his own judgment, yet no man was more solicitous to obtain and collect light on every question and measure on which he had to decide. He knew that authors, like parents, are not among the first to discover imperfections in their offspring, and that consideration would naturally induce him to imitate the example of those ancient and modern writers, (among whom were statesmen, generals, and even men of consular and royal dignity,) who submitted their compositions to the judgment of their friends before they put the last hand to them. Those friends would make notes of whatever defects they observed in the draft, and of the correspondent amendments which they deemed proper. If they found that the arrangement would be improved, they would advise certain transpositions—if the connection between any of the relative parts was obscure, they would make it more apparent—if a conclusion had better be left to implication than expressed, they would strike it out, and so vice versa, if an additional remark or allusion would give force or light to a sentiment or proposition, they would propose it—where a sentence was too long they would divide it—they would correct redundancies, change words less apt for words more apt, &c. &c. &c. To correct a composition in this way is to do a friendly office, but to prepare a new one, and offer it to the author as a substitute for his own, would deserve a different appellation.

Among those to whose judgment and candour,

President Washington would commit such an interesting and delicate task, where is the man to be found, who would have had the hardihood to say to him in substance, though in terms ever so nice and courtly—"Sir, I have examined and considered your draft of an address—it will not do—it is really good for nothing, but sir, I have taken the trouble to write a proper one for you, and I now make you a present of it. I advise you to adopt it, and to pass it on the world as your own, the cheat will never be discovered, for you may depend on my secrecy—Sir, I have inserted in it a paragraph that will give the public a good opinion of your modesty." I will read it to you, it is in these words."

"In the discharge of this trust I will only say, that I have with good intentions contributed towards the organization and administration of the government, the best exertions of which, *a very fallible judgment* was capable. Not unconscious in the outset of the *inferiority* of my qualifications, experience in my own eyes, perhaps *still more*, in the eyes of *others*, has strengthened the motives to diffidence of myself."

If it be possible to find a man among those whom he esteemed, capable of offering to him such a present, it is impossible to believe that President Washington was the man to whom such a present would have been acceptable. They who knew President Washington, and his various endowments, qualifications and virtues, know that, (aggregately consi-

dered,) they formed a *tout-ensemble* which has rarely been equalled, and perhaps never excelled.

Thus much for presumptive evidence, I will now turn your attention to some that is direct.

The history, (if it may be so called,) of the address is not unknown to me; but as I came to the knowledge of it under implied confidence, I doubted, when I first received your letter, whether I ought to disclose it. On more mature reflection I became convinced that if President Washington were now alive, and informed of the facts in question, he would not only authorize, but also desire me to reduce it to writing; that when necessary it might be used to invalidate the imputations to which those facts give colour.

This consideration terminated my doubts. I do not think that a disclosure is necessary at this moment, but I fear such a moment will arrive. Whether I shall then be alive, or in capacity to give testimony is so uncertain, that in order to avoid the risque of either, I shall now reduce it to writing, and commit it to your care and discretion, "*De bene esse*" as the lawyers say.

Some time before the address appeared, Colonel, (afterwards General) Hamilton, informed me that he had received a letter from President Washington, and with it the draft of a Farewell Address, which the President had prepared, and on which he requested our opinion. He then proposed that we should fix on a day for an interview at my

house on the subject. A day was accordingly appointed, and on that day Col. Hamilton attended. He observed to me in words to this effect, that after having read and examined the draft, it appeared to him to be susceptible of improvement. That he thought the easiest and best way was to leave the draft, untouched, and in its fair state; and to write the whole over with such amendments, alterations, and corrections as he thought were advisable, and that he had done so; he then proposed to read it and to make it the subject of our consideration. This being agreed to, he read it, and we proceeded deliberately to discuss and consider it, paragraph by paragraph, until the whole met with our mutual approbation. Some amendments were made during the interview, but none of much importance.

Although this business had not been hastily dispatched, yet aware of the consequence of such a paper, I suggested the giving it a further critical examination; but he declined it, saying he was pressed for time, and was anxious to return the draft to the President without delay.

It afterwards occurred to me that a certain proposition was expressed in terms too general and unqualified; and I hinted it in a letter to the President. As the business took the course above mentioned, a recurrence to the draft was unnecessary, and it was not read. There was this advantage in the course pursued; the President's draft remained,

(as delicacy required,) fair and not obscured by interlineations, &c. By comparing it with the paper sent with it, he would immediately observe the particular emendations and corrections, that were proposed, and would find them standing in their intended places. Hence he was enabled to review, and to decide on the whole matter, with much greater clearness and facility, than if he had received them in separate and detached notes, and with detailed references to the pages and lines, where they were advised to be introduced.

With great esteem and regard,

I am dear sir,

Your obedient servant,

JOHN JAY.

The Honourable RICHARD PETERS, Esqr.

Extract of a letter from Judge Peters to Mr. Rawle, dated

Belmont, Feb. 26th, 1826.

“At the head of my obituary list, stands our venerated and beloved chief, who was always particularly communicative with me. I am certain that, in conversations, I have heard from his own lips, most, if not all, the leading sentiments expressed in the Farewell Address; though I do not recollect any *special* discussion on the subject. I did understand at the time, that he had submitted his draft to

some friends, but had not the exact information which Mr. Jay developes. In my official capacity, during the revolution, I have received many letters from the General, written by members of his family and signed by him. But these were all about the *routine* business of the department. Whenever there was any thing of special confidence, he wrote the whole. With Colonel Hamilton I have often conversed on the flying stories of the day, as to the great assistance he received from his family in composition of letters, papers, &c. Col. H. always scouted the idea of *their* doing more than taking off the laborious drudgery of current business, and always gave the General the merit of being the unassisted writer of important compositions and correspondence.

The committee subsequently addressed the following letter to Nicholas Fish, Esq. of New York.

SIR,

Having been appointed by the Historical Society of Pennsylvania a committee to collect and report to them such evidence as may be attainable in respect to the original author of the Valedictory Address of President Washington in 1796, we have made several enquiries on the subject.

We now take the liberty of addressing you as the

surviving executor of General Hamilton, and probably in possession of most of his papers. It has been supposed by some, that the address was originally composed by General Hamilton. Our impressions from all the information that we have been able to collect, are to the contrary. It appears to us that the original draught was the sole work of the President, but submitted, by him, to his friends. Mr. Jay and General Hamilton, for revision. But in justice to the friends of General Hamilton, (and we beg you to consider us as having the highest respect for his memory,) we should think it improper to make a report which will probably be published, without a previous enquiry in that quarter, where, if erroneous impressions have been received by us, they are most likely to be corrected.

We therefore beg the favour of you, sir, to communicate any facts which you will think proper for publication in the next volume of the memoirs of the society, tending to show, that in your opinion, this address was not the original composition of the President, but of some other, and what person.

We are, &c.

W. RAWLE,
BENJ. R. MORGAN,
C. J. INGERSOLL.

To NICHOLAS FISH, Esq.

ANSWER.

New York, May 15th, 1826.

GENTLEMEN,

I have the honour to acknowledge the receipt of your letter of the 6th ultimo, on the subject of General Washington's Valedictory Address, and at the same time to offer you an apology for having so long delayed answering it.

You say it has been supposed by some that the address was originally composed by General Hamilton, but that your impressions from all the information that you have been able to collect are to the contrary, and that you should think it improper to make a report which will probably be published, without a previous enquiry in that quarter, where if erroneous impressions have been received by you they are most likely to be corrected; that you therefore address me, as the surviving executor of General Hamilton, supposing it probable that I am in possession of most of his papers, and requesting me to communicate any facts I may think proper for publication in the next volume of the memoirs of the society, tending to show that in my opinion this was not the original composition of President Washington, but of some other and what person.

None of General Hamilton's papers are in my possession, but some of his papers relating to the subject of your enquiry are supposed by the General's family to be in the hands of the Hon. Rufus

King, our minister to London, against whom a suit in chancery was instituted previous to his departure on his mission, for the recovery of them; to which suit I am pro forma a party. As to my personal knowledge on this subject, I freely avow that I am not possessed of any fact tending to show that the original draft of Washington's Valedictory Address was written by any other person than himself.

I have the honour to be, Gentlemen,

With great consideration,

Your obedient servant,

NICHOLAS FISH.

To W. RAWLE,
BENJAMIN R. MORGAN, } Esquires,
C. J. INGERSOLL,

Committee appointed by the Historical Society of Pennsylvania to collect and report to them such evidence as may be attainable in respect to the original author of the Valedictory Address of President Washington in 1796.

Having been requested by the Historical Society of Pennsylvania to give an account of the circumstances attending the first publication of the Valedictory Address of the late President Washington to the people of the United States, I will now state them, as accurately as my memory enables me.

A few days before the appearance of this memorable document in print, I received a message from the President, by his private secretary, signifying his desire to see me. I waited on him at the appoint-

ed time, and found him sitting alone in the drawing-room. He received me kindly, and after I had paid my respects to him, desired me to take a seat near him—then, addressing himself to me, said, that he had for some time past contemplated retiring from public life, and had at length concluded to do so at the end of the (then) present term: that he had some thoughts and reflections on the occasion, which he deemed proper to communicate to the people of the United States, in the form of an address, and which he wished to appear in the *Daily Advertiser*, of which I was editor. He paused, and I took the opportunity of thanking him for having preferred that paper as the channel of his communication with the people, especially as I viewed this selection as indicating his approbation of the principles and manner in which the work was conducted. He silently assented, and asked when the publication could be made. I answered, that the time should be made perfectly convenient to himself, and the following Monday was fixed on: he then told me that his secretary would call on me with the copy of the address on the next (Friday) morning, and I withdrew.

After the *proof sheet* had been compared with the copy, and corrected by myself, I carried another *proof*, and then a *revise*, to be examined by the President; who made but few alterations from the original, except in the punctuation, in which he was very minute.

The publication of the Address, dated “United States, September 17th, 1796,” being completed on

the 19th, I waited on the President with the original; and, in presenting it to him, expressed my regret at parting with it, and how much I should be gratified by being permitted to retain it: upon which, in an obliging manner, he handed it back to me, saying that if I wished for it, I might keep it; and I then took my leave of him.

Any person acquainted with the handwriting of President Washington, would, on seeing this specimen, at once recognize it. And, as I had formerly been honoured by written communications from him on public business, I may say that his handwriting was familiar to me; and I think I could at any time and without hesitation, identify it. The manuscript copy consists of 32 pages of quarto letter paper, sewed together as a book, and with many alterations; as, in some places whole paragraphs are erased, and others substituted, in others, many lines struck out, in others sentences and words erased, and others interlined in their stead. The tenth, eleventh, and sixteenth pages are almost entirely expunged, saving only a few lines; and one-half of the thirty-first page is also effaced. A critical examination will show that the whole, from first to last, with all its numerous corrections, was the work of the same hand; and I can confidently affirm, that no other pen ever touched the manuscript, now in my possession, than that of the great and good man, whose signature it bears.

D. C. CLAYPOOLE.

Philadelphia, February 22d, 1826.

To the foregoing statement of Mr. Claypoole, (whose fair and honourable character is well established among us,) I think it not improper to add, that I have carefully examined the manuscript from beginning to end, and being well acquainted with the handwriting of this eminent personage, I am entirely satisfied that there is not a word in the text written by any other than himself. I had a doubt only as to the *date*, which did not as it appeared to me exactly correspond with the rest, but on further examination, I am induced to think that it is all in the same writing; in which opinion Mr. Claypoole fully coincides. At all events, I am perfectly satisfied that it is not in the handwriting of General Hamilton, with which I am also well acquainted. The date may have possibly been by the private secretary of the President.

W. RAWLE.

Feb. 22d, 1826.

A Vindication of the Rev. Mr. Heckewelder's History of the Indian nations, by William Rawle.

[Read at a meeting of the Council on the 15th day of February, 1826.]

WHEN a literary work has been in possession of public confidence for years; when the author is known to have been a man of probity incapable of wilful deception; when he is known to have had the best means of information concerning the facts

he relates, and when these facts are of a character not too abstruse or profound for the compass of his mind, it is natural for those, who have believed and relied on his narration, to feel an interest in supporting the reputation of the author against unexpected and unfounded attacks.

In the year 1819, under the auspices of the historical and literary committee of the American Philosophical Society, appeared a work entitled "An account of the history, manners, and customs of the Indian nations, who once inhabited Pennsylvania and the neighbouring states, by the Rev. John Heckewelder of Bethlehem."

Mr. Heckewelder was of German descent. He was a faithful and zealous member of the Moravian brotherhood at Bethlehem in this state, and under their direction, he exposed himself for the greatest part of his life, to the hardships and the perils of a residence among the Lenapi or Delaware Indians, in an unremitted endeavour to convert them to christianity.

He was well known in Philadelphia, which, after his age and infirmities, combined with other circumstances, compelled him to relinquish the mission, he occasionally visited. With Doctor Wistar, who was also of German extraction, he was particularly intimate; but he was known to almost all the men of letters in our city, and respected by them all. In his demeanour he was modest and unassuming. From his long residence among the Indians, he seemed to have imbibed something of their manners:

courteous and easy in his intercourse with every one, a stranger to all affectation and artificial ceremony, somewhat inclined to taciturnity, or at least never obtruding himself on the notice of others, or seeking to lead the conversation, those who personally knew him were the more inclined to give credit to his book, and those who read his book before they personally knew him, found that the man corresponded with the character of which the book gave them the idea.

The work was received with general approbation. It was evidently written to support no party, to explain no peculiar system, to promote no personal views: he had formed the narrative for his own private amusement or use, and his consent to appear as an author, both of this and of a subsequent publication, was not given without reluctance.

He presented to us some new views of the Indian character. He impressed us with the belief that these people were still more acute, more politic, and in some respects more refined, than had been generally understood.

But the whole account of them was conveyed in a manner so plain and unaffected, with such evident candour and apparent accuracy, that conviction generally, if not universally followed perusal. To enumerate all those persons on whom this impression was made would be tedious. It would not perhaps be deemed fair to mention names, however respectable, from whom only colloquial testimony has been received; but when we find in print such authorities

as Wistar, Duponceau, and Dr. Jarvis, of New York, all of one sentiment in regard to it, we may justly consider him as proudly supported. To these we add the *North American Review*, the anonymous authors of which, as those of all similar works, stand before the public on the ground of their own strength of mind, soundness of judgment, and purity of taste. Undertaking to instruct the world as to the reception which it ought to afford to the labours of others, they are, as they ought to be, cautious in bestowing commendation, and a work highly extolled must be understood to have been thoroughly examined and fully approved.

The encomiastic strains employed by these gentlemen on the work in question, were not beyond its merits, but they were certainly warm.

After giving an analysis and various extracts, the Reviewers proceeded as follows:—

“The work abounds in facts and anecdotes culled, not merely to entertain the reader, but to lay open in the most *authentic* and *satisfactory* manner, the character and condition of this people. There is no *other work extant*, in which this design has been so *extensively adopted*, or in which the object is so *fully accomplished*.”

With these testimonials the work of Heckewelder has glided down the historical current of time without any impeachment of its merits, till its author has been removed to a world from which he can wield no weapon of defence against sublunary criticism.

Were he still living, he would read with surprise,

imposed on; and if all our knowledge is “unhinged” by his faulty productions, the world cannot be too soon informed of its error. But general assertions will not always produce conviction—and we naturally expect that specific examples, supported by reasonable proof, shall be adduced, before we withdraw our reliance on a work which has so long been received as credible and authentic.

It is indeed the more necessary when the opponent himself falls into a looseness of expression which is no where exceeded by him whom he condemns, and when he weakens or destroys his own argument by the illustration with which he endeavours to support it. Thus, in the last paragraph quoted, the Reviewers at first generalize, then connect their observation with a particular case, and afterwards show that this illustration of it is of no value.

We had previously been told in the same article that an actual residence among the Indians was the only means of obtaining a competent knowledge of their character. Mr. Heckewelder’s long residence among them is distinctly noticed, and of course he had the power of obtaining a more perfect knowledge of them than could be acquired by casual travellers. If their accounts differ from his, there is therefore no reason for giving the preference to them; and the Reviewers seem particularly injudicious in proceeding to mention the name of *La Hontan*, whom, at the same time, they described as unworthy of credit, and of course as rendering it no loss to us

if his "fables" should be superseded by the plain narrative of Heckewelder. In another place they condemn the early and principal French writers in a mass—excepting only *Charlevoix*. We are told that they were "credulous men who possessed neither enlarged views nor sound judgment."

The Reviewers proceed to consider some of the most "prominent errors" of our venerable author; and they deserve our thanks for enabling us thus to examine those imputations which, while wrapped up in general terms, it would not be in our power to understand or refute.

In the consideration of them, the order in which they are presented will as much as possible be adhered to, although their relative importance might require a different arrangement. In the first place, an objection is raised against the orthography, and in the next place, against the translation, of the ancient national appellation of the Delawares. Mr. Heckewelder has erred in writing *lenni lenapi*: it should be *lennee lenaupè*, accentuating the last syllable with a strong expiration of the breath, which has no exact representative in the English alphabet. If this latter is the case, it is not very reasonable to condemn a man for not doing what is impossible. In respect to the mode of spelling these two words, Mr. Heckewelder has much authority on his side; but the variation is too minute to form a proper subject of reprehension.

The translation of these words is more interesting. That given by Mr. Heckewelder corresponds with

the lofty notions entertained by the savage of the source from which he sprung. *Lenni*, he tells us signifies *man*, and *lenapi* means *original*; but the Reviewers inform us that the more general and proper sense of “*lennee*” is *male*, although in a restricted sense, it may signify *man*, and that “*lenaupè*” means *common*, so that according to them, these words when used together import *common male*, according to Mr. Heckewelder, they signify *original man*. On which side the inaccuracy lies, would probably soon be decided by the Delawares themselves, and the subject merits no further notice.*

3. An objection is next made to Mr. Heckewelder's relation, that the Delawares bore, in respect to other tribes, the designation of grandfathers, supporting in some degree their claim to an ancient and extensive superiority. The Reviewers deny his inference, but, with an air of mystery, observe that a “full consideration of the subject might lead to important conclusions.” Mr. Heckewelder speaks with modesty and reserve, and it would be difficult to adopt any other reason for this figurative language than that which he assigns. We are all acquainted with the constant practice of the Indians to apply the epithet “*Father*,” to the President of the United States, as they formerly did to the King of Great Britain; always indicating political superiority by a domestic

* The confusion of ideas on this subject imputed to Mr. Heckewelder, in a note at p. 68, cannot be perceived by the writer of this article on examining the passages referred to, but it would require too much time to go through them.

phrase ; and the application of a higher cognate term among themselves, in those early days to which it is traced, may reasonably be supposed to have signified a still higher political relation. The fact itself does not seem to be contradicted by the Reviewers.

4. The account of the ancient Lenapi conquering the Allegewi is, in the next place objected to ; but, whether true or false, Heckewelder, who expressly relates it as a tradition of the Lenapi, is not responsible. And a general remark may here be introduced, that the author who professes to give an account of the history of a nation among whom he has resided, would perform his task imperfectly if he disregarded their own traditions. The ancient history of every part of Europe depends on such traditions ; the probable truth of which is sometimes supported by circumstances that are subsequently authenticated. In the Lenapian history of the total extirpation of the Allegewi, we see nothing inconsistent with that well known ferocity of savage tribes, which still unhappily continues to rage among them.

5. In the trifling discussion on the etymology of the word Mississippi, the Reviewers may be right ; and if the Chippewas were really the godfathers of that majestic stream, the conjunction of the terms *meesee* great, and *seepee* river, is more natural than that in which Mr. Heckewelder was instructed by his Delaware friends.

6. The ancient fortifications are attributed by Heckewelder to the Allegewi. The Reviewers say

no—the forefathers of the present Indians erected them ; and they gravely quote Dr. Clark to show that there were fortifications in Greece. We will venture to remark that neither Heckewelder nor the Reviewers could know any thing about the matter, and one had as good a right to speculate as the other.

7. The “ puerile ” history of the former power of the Delawares, and the manner in which the sceptre departed from them, is severely ridiculed. Now it is an Indian tradition, and as such it is given by Heckewelder, that the Iroquois, with the assistance of the Dutch, by a great refinement in policy, and with considerable difficulty, persuaded the Delawares to “ put on the petticoat and become women ; ” that is, to lay aside the practice of arms, and, confining themselves to the arts of peace, become the arbiters of the surrounding tribes. To this it is said the Iroquois were induced by a fear of the numbers and power of the Delawares ; and, while they thus neutralized this formidable nation, the Iroquois were not only free from apprehensions for their own safety, but were left at liberty to pursue their military expeditions against other powers. The Iroquois on the contrary, contended that they reduced the Delawares to this condition by force of arms ; and one thing only is certain, that until a very late period, the Iroquois asserted certain rights over the Delawares, even so far as to restrain them from alienating their lands. Their insolent abuse of this superiority was strongly manifested at the treaty of

Philadelphia in 1742. But Heckewelder is supported in his account by the Rev. Mr. Loskiel; and he also appears to have conversed with some of the Iroquois on the subject. If the tradition of the Delawares is correct, it is certainly an extraordinary instance of a nation's voluntarily parting with the means of self-defence for the purpose of becoming mediators and arbiters between other nations. But the loss of military power would have been compensated, as they represented, by their own increase and internal happiness, had it not been for the constant encroachments of the white people. It is now of little consequence. The melancholy and degraded remnants of both the Iroquois and the Delawares, without power or permanence, by referring to the memory of the past, only embitter the present, and vainly seek in traditions a consolation for the absence of almost every substantial happiness.

8. Much severity is employed on the relation given by Heckewelder of a conversation between Colonel Crawford, a prisoner about to be executed, and *Wingenund*, a chief of the Delawares, whom Crawford had sent for, in hopes of obtaining mercy through his intercession. No white man, say the Reviewers, could have been present at this conversation; and therefore the inference is, that it was merely a creature of Heckewelder's imagination: indeed they say expressly that it is "wholly apocryphal."

Now, if the book were quoted with the least de-

gree of candour, the reader would perceive that Mr. Heckewelder does not pretend to have been present on the occasion, but informs us that the particulars of this conversation were communicated to him by *Wingenund* and others. If he falsified the relation he received, no terms of reprobation would be too strong; but a gratuitous imputation of so much depravity cannot be approved.

In the disposition to cavil at almost every thing related by our author, the Reviewers find fault with another part of this conversation. "Had you attended," says *Wingenund*, "to the Indian principle, that good and evil cannot dwell together in the same heart," &c. This principle is declared by the Reviewers to be new to them. "It would be difficult," they say, "to find it either speculatively or practically in any other place than the Delaware school of ethics." They ought to have recollected that the question is not whether the philosophy was sound, but whether the information given to Heckewelder was truly reported by him.

It seems an indirect attempt to diminish his weight of character, and it does not merit approbation.

9. In the same disposition to condemn, insinuations of at least a want of precision are, in a subsequent passage, thrown out against this worthy man, to support which a part of a sentence is quoted. That an Indian should say, "I am a sort of a chief," is supposed to be impossible; but the residue of the sentence is omitted in which the Indian observes

that he is neither a great chief nor a very small one. That there are gradations of power and distinction among them, is well known.

10. Another remark of the same Indian is quoted with the same scepticism by the Reviewers. It is the enumeration of articles which a successful hunt would have enabled the Indian to procure for his wife, and although they do not constitute the common food of those people, we may reasonably suppose that in the vicinity of missionary settlements such articles were known and acceptable to the females.* In their concluding objection the Reviewers are equally unsuccessful if they mean to impugn the veracity of Heckewelder. They contradict the account given of *Tar-hé*, or the Crane, murdering an Indian of the name of Leatherlips: but Heckewelder does not relate the fact as of his own knowledge; he transcribes a letter by which the account was conveyed to him.

In respect to the philological talents of Mr. Heckewelder, it is not intended at present to enter into any discussion. The writer of these remarks has never felt an inclination to study evanescent forms, or to keep alive a variety of languages, which from every motive of national and beneficent policy, he would wish to see absorbed in one general tongue. The tribe whose peculiar and extraordinary dialect

* In Mr. Schoolcraft's journal of his travels, it appears that he and Governor Cass partook of a breakfast at an Indian wigwam, among the articles composing which were *bread* and *tea*.

rivets the attention of the philologist, moulders into nothing before he becomes master of its language ; and the vocabulary laboriously collected, and the grammar scientifically derived from it, in a few years remain the only certain evidence of its former existence. Yet the study is in itself one of high interest to those who delight to trace the powers and operations of the mind, and it is not intended to detract in the smallest degree from the ardour of their pursuits. On the present occasion it will only be observed, that in 1819 the Reviewers applauded "the ingenious and useful labours" of Heckewelder in these investigations, and in 1826 he is styled "negligent and inaccurate." On this subject, Mr. Schoolcraft, whose work is mentioned with approbation by the Reviewers, may also be referred to. His words are, "the enquiries into the Indian languages, under the directions of Mr. Heckewelder, evince more severity of research than had before his time been bestowed upon the subject ; but the observations of this pious and worthy missionary have only opened the door of enquiry."

These remarks have perhaps been sufficiently extended for the mere purposes of vindication. If it has been shown, that in many instances Heckewelder has been unfairly quoted and unjustly condemned, we are entitled to ask for further evidence of his errors, before we assent to the total rejection of his book from the catalogue of our standard authorities.

But it is not unreasonable to enquire, whether those who have spared another so little, have enti-

tled themselves, by their own consistency and precision, to the exercise of an office so high and so severe. Whoever reads the whole of this part of the review, cannot fail to perceive in it a constant attempt at original and profound reflection, not always successful; theories that are contradicted or abandoned almost as soon as they are formed, and modes of ratiocination which frequently refute themselves. We are assured by the Reviewers, that we are about as ignorant of the moral character and feelings of the Indians, as when Jacques Cartier first ascended the St. Lawrence. The confession is commendable if it were correct; but he who undertakes to assert that the mass of information of which we are possessed is not to be depended on, ought to satisfy us that he has acquired that exact and superior knowledge, which can alone enable him thus to pronounce upon the imperfection of ours.

It is positively asserted that the Indians "have no government:" but this is explained by saying that they have none whose operation is felt either in rewards or punishments, and yet the Reviewers add that their lives and property are protected. By what means, unless by some power of government, can this protection be systematically afforded? Their "political relations" among themselves, and with other tribes, are said to be duly preserved. How can they be preserved unless by means of laws, not the less obligatory because not reduced to writing.*

* In page 63, of the Review we are told that the Indians have *laws* regulating marriage. It would be strange if they had laws on no other subject.

The submission of an Indian who has been guilty of murder, to the retributive stroke of a relation of the deceased is, by an interrogative mode of reasoning, referred to some unknown principle, equally efficacious with the two great motives of hope and fear, “upon which all *other* governments have heretofore rested.” Without pausing to consider the meaning of the word “other,” which no accurate writer would make use of, unless the Indians also had a government, we may distinctly account for the course pursued on such occasions, by referring to the ancient history of European nations, where similar procedures were established as the regular course of penal law. They prevailed in Greece in the time of Homer; in Germany, when Tacitus wrote his annals; in England, Wales, and Ireland; and although now generally abolished, it is well known that in England they still continue, in certain cases, under some legal restrictions.

The Indian, therefore, who submits to this mode of vindictive punishment, submits to the laws of his country; and if he neither “flees nor resists,” it is because both would be alike disgraceful and unavailing.

But these retaliative criticisms need not to be further pursued, although perhaps some additions to them might fairly be made. The detection of errors in reasoning, or inaccuracies in diction on the part of the Reviewers, will not redeem the faults of Mr. Heckewelder; yet it is not unpardonable to have shown that those who are so liberal of censure, are

not, themselves, free from imperfection. The authority of a sentence is somewhat impaired, when we perceive that the judge partakes of the same delinquency.

The author of these strictures, seeing no reason to alter the opinions of Mr. Heckewelder's merits, which he avowed in the inaugural address, has felt it a duty to endeavour to support them; but he hopes that he will not be thought to have evinced more asperity than the occasion justifies. The merit of the *North American Review* is fully admitted. It generally contains much valuable information and sound remark: it supports our literary reputation abroad, and largely contributes to the dissemination of polite learning at home: but in the present article the Reviewers seem to have forgotten their own habits, and it may almost be said, their own established character. The rumour by which it is attributed to a person in office under the United States, may not be unfounded; but, on rumour only, his name could not be introduced without impropriety; and no other course is open to general readers, than to consider the publication as an adoption by the editors, of all which the article contains.

AN
ACCOUNT
OF THE
FIRST SETTLEMENT OF THE TOWNSHIPS
OF
BUCKINGHAM AND SOLEBURY.
IN
BUCKS COUNTY, PENNSYLVANIA,
WITH REMARKS ON
THE ADVANCE OF IMPROVEMENTS IN AGRICULTURE, &c.
AND
THE STATE OF MANNERS IN SOCIETY AT DIFFERENT PERIODS;
INTERSPERSED WITH NAMES OF THE FIRST SET-
TLERS, REMARKABLE OCCURRENCES,
ANECDOTES, &c.

*The whole intended as a characteristic comparison of one
era with another, and to preserve some knowledge
of our forefathers, in their progress in settling
and improving a wilderness country.*

BY DR. JOHN WATSON.

MDCCCIV.

*Communicated by Mr. Isaac Comly, of Byberry, Bucks
County, at a meeting of the Council, on the 19th of April
1826.*

AN ACCOUNT, &c.

THE township of Buckingham, situate near the centre of the county of Bucks, is the largest township in the county, containing 18,488 acres.

Solebury lies between Buckingham and the river Delaware, and contains 14,073 acres.

The whole of the two townships in early time was called Buckingham, being a favourite name with our first worthy proprietor, *William Penn*. The name was first given to the township and borough now called Bristol, but transferred here perhaps about the year —, before Cutler's re-survey; by which it appears, that the two townships were divided by a north-west line from the lower corner of Thomas and John Bye's tract, extending to the upper corner of Randal Blackshire's tract.

John Cutler, in the draught from which the preceding is taken, has noted that four perches in breadth were left between the opposite surveys, for a public street or road; being on the north-east of the township of Buckingham, and on the south-west of the township of Solebury. It appears probable that it was designed that every purchaser should have the advantage of a road on one side of his survey; and therefore they were laid out answering to each other, about 320 perches in width on each side

of the township line, and one range further in Solebury.

It appears, by an enumeration of the inhabitants taken in 1787, that Buckingham contained 173 dwelling-houses, 188 out-houses, 1173 white inhabitants, and 13 blacks. Solebury, 166 dwelling-houses, 150 out-houses, 928 white inhabitants, and no blacks.

In the township of Buckingham, a fine stream of water, arising from numerous small springs in the grit-land above York road, and some larger supplies from the limestone land below, unites its several branches, and running through the south-west end of Wrightstown, falls into the Neshamony. The Indian name of this stream was Lahaskekee, or Lahaskeek. The white people called it Randall's run; and a south branch, Roberts's run.

Two rocky ridges of the same Indian name run parallel to each other, and about 80 perches apart on the south-west side of the creek. Between these hills and the stream, there is a piece of fine land, of a soil black, light, and sandy; which probably was once an Indian settlement. In 1769, a white-oak tree was cut on this land, in which there were several large marks of an axe; which showed by the years' growths, that it had been done near 50 years before the grant of the province to William Penn. I have seen the form of a hawk or eagle cut in the bark of a white-oak by the Indians not far distant.

The stone on these hills is a kind of hard, sandy flint, and a bed of limestone deep underneath.

The same ridge rises again about 80 perches on the south-east of the creek, and extends nearly north-east, inclining to the east, 3 miles, to near Buckingham line. This hill is much higher than the others; the stone and soil the same, and the Indian name the same. After a small interval of about 80 perches, broken and irregular hills continue to the river, winding in their direction rather more eastwardly, and of an entirely different kind of stone, being a hard ochre, or bluish rock, inclining to a round form, but very unshapely for building. On the south-east side of these hills rise those fine springs of water that form the source of Pidcock's creek.

James Letch, who formerly travelled on foot to Long Island, traced this chain of broken hills, throughout his journey; and it is remarkable that they form the first rocky ridge from the sea shore.

A certain Doctor Bowman, being of a contemplative turn of mind, in the early settlement, used to frequent the fine round top of one of these hills near the river; and, at his request, he was buried there. It is since called Bowman's Hill. Many others have since been buried at the same place. Bowman's Hill is directly opposite to another on the Jersey shore called Belmont, of the same height, form, and direction; and they appear to have been separated by the river Delaware. This appears evident at a distant observation, and is fully confirmed by examining the ends of the hills.

The broken hills near the river in the upper end

of Solebury, are cut into deep winding hollows, by streams of water. In these banks and around in the neighbourhood, are great abundance of good building stone, splitting and dressing well, of a finer or coarser grained grit, and of different colours. Some are a mixture of coarse sand and pebbles. All these kinds of stone, on a somewhat sandy soil, are common in the upper part of both townships.

In the hills near Howell's ferry, and thence in a south-westerly direction through Solebury and part of Buckingham, rocks are found, very suitable for rough millstones, and other uses of that kind. A narrow vein of limestone begins in Buckingham, back of the Lahaskekee hill, and runs parallel with it, and probably under it, to the north-east end of Buckingham line, and then becomes wider in Solebury, and divides, interspersed with other soils, to the river. In the lower part of Buckingham, the soil is a loam, blue clay, or *shell* on a shell bottom, pretty level, and wet. Solebury is generally hilly, with a great variety of different soils and stones, well supplied for the most part with springs of good water, except on a piece of barrens, where there are no springs nor running water. This land, with proper management of late years, has produced good crops of grain and grass.

A very large spring rises in Solebury, called by the natives Aquetong, and by the white people Ingham's, or the Great Spring. The water flows out in a cove or hollow; the stone on the south-east being a solid red-shell, while those on the north-west

are limestone. It is remarkably clear and cold in summer, and seldom freezes in winter. The quantity is supposed sufficient, with 18 or 20 feet fall, to turn two grist-mills almost uniformly throughout the year; and there are five good sites for mill-works on the stream to where it falls into the Delaware at Newhope, or Coryell's ferry, a distance of about 3 miles. It is employed at the present time for one paper-mill, one fulling-mill, two merchant-mills, four saw-mills, and an oil-mill.

There has been an inquiry concerning the source from which so great a quantity of water is so regularly supplied. Perhaps the most probable conjecture is, that throughout all, or most part of the limestone vein for 8 or 9 miles to the south-west, there are large cavities formed by the decaying of the stones; and these in some places having openings which admit fresh and moist air, the extensive cold stone surface acting like a vast still, is continually dropping and running down the sides, and affording a fresh supply of water. To this may be added the water collected in ponds and limestone sinks, which are numerous.

The water may be collected in several subterraneous reservoirs or ponds, and pouring down from the higher into the lower, and being confined by a vein of red-shell or some other kind of hard stone or earth, may at length flow out in one place.

To confirm this opinion, it is remarked that the water in four or five wells on T. Bye's tract, and in a sink near them, is on an exact level, and that they

rise and fall together. But some difficulty arises to account for this rising and falling of the water, if there be a free vent for its discharge.

Isaac Pillars's spring discharges a lively stream, but in dry summers falls several feet; and when there are but a few gallons in the bottom, it cannot be emptied by lading out; which shows that it is supplied by a large body of water under ground.

Large's pond on the York road appears to have been one of these limestone sinks. The area is about half an acre: the water never rises above a certain height, and falls in a dry summer 10 or 12 feet, but is never quite dry.

A little below Coryell's ferry, now called New-hope, the Delaware is confined between two hills. This place is called the Narrows; and the river is said to fall 7 or 8 feet in about half a mile. The whole channel is full of rocks, and the water roars aloud in passing through. From hence up to Paxson's Island there is in many places a sudden rise 10 or 12 feet high, called the Boother Bank. This has doubtless at some time been the bank of the river; but if at some distant period the water of the river Delaware flowed over the top of Bowman's Hill, (which is probable,) this small alteration in its course must have happened long since, perhaps at the time of some great fresh.

It is also supposed that the Delaware once flowed over the top of the Blue Mountain, and that there was a great lake on the north side of it; that the fall of a great southerly storm of rain, at the

breaking up of winter, and melting of a deep snow, has so raised the waters that the obstruction of the water gap at the mountain was suddenly borne away, causing a vast rise of the waters below, and producing proportionable effects. Probably the obstruction at Solebury and other places above were then worn down and carried away. It is certain that large pieces of limestone and other stone are now found along shore that have been washed down a great distance. Different kinds of stone by continual rolling and wearing have become smooth and round, and are called boothers. The continual washing away of the earth by the fall of rains and flowing of streams, has caused the winding hollows, and general inequalities that now appear; at least this broken roughness must be now much greater than it was 2000 years back.

The first settlers generally came from England, and were of the middle rank, and chiefly Friends: many of them had first settled at the Falls, but soon after removed back, as it was then called, into the woods. As they came away in the reigns of Charles, James, William, and Ann, they brought with them not only the industry, frugality, and strict domestic discipline of their education, but also a portion of those high-toned political impressions that then prevailed in England.

Friends had suffered much under the Stuarts; and though promised much by the Oliverians and a republican equality, they experienced but little relief from either. They therefore equally disliked

the presbyterians and the pretender; and were loyally attached to the protestant succession in the house of Hanover.

Being particularly pleased with the charter of privileges formed by their great patron, William Penn, they naturally esteemed it a kind of religious duty, vigilantly to guard against any thing that might tend to a violation of so valuable an acquisition, which at once secured civil and religious liberty. The principles of government having been warmly discussed for some time back in the mother country, the subject had become familiar to common capacities; and politics were frequently a topic of fire-side conversation, in which the newly installed free-men felt themselves deeply interested.

From this remote cause, perhaps, has originated, in part, the zealous energy of party spirit at the present time. Many of the early settlers of Buckingham and Solebury had been educated in what may, with some propriety, be termed good style; and though not great scholars, yet were great men. The exercise of their personal and mental abilities were excited into a high flow of energy, by the bold enterprise of settling a new country, under so many novel circumstances, of such importance to themselves and their posterity. The women were generally good house-keepers; or at least, their industry and frugality made proper amends for whatever might be deficient, in respect to such improvements and refinements as were not so well suited to their circumstances of mediocrity and equality.

At that early period, when our forefathers were building log-houses, barns, and sheds for stables, and clearing new land, and fencing it chiefly with poles or brush, it has been said that a *heartly, sincere good will* for each other generally prevailed among them. They all stood occasionally in need of the help of their neighbours, who were often situated at some distance through the woods.

Chronic ailments were not so frequent as at present; which was, perhaps, in part owing to the wholesome diet, brisk exercise, lively manners, and cheerful and unrefined state of the mind. But acute disorders, such as fevers, in various degrees—those called “long fevers, dumb agues, fever-and-agues,” sore throats, and pleurisies, were then much more common than now. The natural small-pox was peculiarly distressing—was mostly severe, and often mortal—and nothing strange that it should be so. The nature of the disorder being but little known, it was very improperly treated by the nurses, to whose care the management was chiefly committed. A hot room—plenty of bed clothes—hot teas—and milk punch, or hot tiff, were pronounced most proper to bring the eruption out, and to make it fill well; and the chief danger was apprehended from the patient taking cold by fresh air or cold drink.

This mode of ill-directed kindness, produced scenes of afflicting distress; nearly whole families being ill at once. Good friends and neighbours, both men and women, collected, affording their assistance by turns, often for several weeks.

Rum was esteemed absolutely necessary for the sick, and nearly as much so for the attendants. A dram, either raw, sweetened, or with wormwood or rue juice—and chewing, but more commonly smoking tobacco, were used as antidotes against infectious or offensive smells. A dram, or the pipe, amused the vacant time, and was supposed to be useful. As money was scarce, and labourers few, and business often to be done that required many hands, friends and neighbours were commonly invited to raisings of houses and barns, grubbing, chopping, and rolling logs, that required to be done in haste to get in the crop in season. Rum, and a dinner or supper were provided on those occasions; and much competition excited in the exercise of bodily strength and dexterity, both at work and athletic diversions.

Reciprocal assistance, being much wanted, was freely afforded and gratefully received—and notwithstanding the rude and unpolished state of mind and manners that may be expected to have prevailed in the first settlers in a wilderness country, and in a much more marked degree in those who succeeded after them, yet from their mutual wants and dependencies, the social and active vivacity of simple nature, and perhaps more than all these, from their hearty and honest zeal in a religious bias of the mind, a kind and unaffected friendship formed a principal feature of their general character. Their equality of circumstances, similarity of views and pursuits, and union in religious and civil principles,

and the acquisition of new acquaintances far from their former connexions, all tended to unite them in habits of sociability, and to form impressions of sincere regard.

When false impressions, or indeed ignorance, have once so far gained ground as to influence general habits and customs on an erroneous principle, it requires much labour, and a long time to wear them out. This appears evident in the use that is made of spirituous liquors and tobacco. It is probable the first settlers used these articles to ward off infection; and spirits principally to prevent the bad effects of drinking water, to which they had not been accustomed in Europe. They imagined the air and water of this hot climate to be unwholesome. The immediate bad effect of cold water, when heated with exercise in summer, and the fevers and agues which seized many in the autumn, confirmed them in this opinion; and not having conveniences to make beer that would keep in hot weather, they at once adopted the practice of the labouring people in the West Indies, and drank rum. This being countenanced by general opinion, and brought into general practice as far as their limited ability would admit, bottles of rum were handed about at vendues, and mixed and stewed spirits were repeatedly given to those who attended funerals—

“ So fast the growth of what is surely wrong.”

A concern arose among Friends on the subject, and a stop was put to this evil practice in a short

time. I call it evil, because it produced effects that were hurtful in a high degree to individuals, and also to society in general.

An act of assembly was passed, prohibiting the giving of spirits at vendues ; and though the law was not much regarded for many years, and the practice continued, yet this mischievous and dishonest practice is almost wholly disused.

In early times, weddings were held as festivals ; probably in imitation of such a practice in England.

Relations, friends and neighbours were generally invited, sometimes to the amount of one or two hundred : a good dinner was provided, and a lively spirit of plain friendship, but rather rude manners, prevailed in the company.

They frequently met again next day, and being mostly young people, and from under restraint, practised social plays and sports, in which they often went to an extreme of folly ; but in those times such opportunities of promoting social acquaintance might be in some degree proper, though otherwise wrong.

At births, many good women were collected ; wine, or cordial waters, were esteemed suitable to the occasion for the guests : but besides these, rum, either buttered or made into hot tiff, was believed to be essentially necessary for the lying-in woman. The tender infant must be straitly rolled round the waist with a linen swathe, and loaded with clothes until he could scarcely breathe ; and, when unwell or fretful, was dosed with spirit and water stewed with spicery.

Thus it was that manners and customs were not yet reduced from the rude and unpolished practices of antiquity to the proper standard of use and propriety. A considerable degree of roughness and rusticity of mind and manners prevailed, and for some time increased in the generations that succeeded the first settlers. For this I shall call to view several reasons; first, the loose order of schools; the severe whippings and ferulings, which did not at all mend the matter; the small stock of learning obtained; but more than all, the free use of rum at vendues, at frolics, and in hay-time and harvest. On all these occasions, quarrels and fist fights frequently happened; and in the lower class of people a high degree of ignorance and want of respect due to themselves or others prevailed; so that much might be seen and heard that was *low-lived* in the full sense of the term; and this was far from being limited to persons of small property only.

When wheat and rye grew thick and tall on new land, and all was to be cut with sickles, many men and some women became dexterous in the use of them, and victory was contended for in many a violent trial; sometimes by two or three only, and sometimes by the whole company for 40 or 50 perches. About the year 1741, twenty acres of wheat were cut and shocked in half a day in Solebury. Rum was drunk in proportion to the hurry of business, and long intervals of rest employed in merry and sometimes angry conversation.

The imposing authority of necessity, obliged the

first settlers and their successors to wear a strong and coarse kind of dress: enduring buck-skin was used for breeches and sometimes for jackets; ozna-brigs, made of hemp tow at 1s. 4d. per yard, was much used for boys shirts; sometimes flax, and flax and tow were used for that purpose; and coarse tow for trowsers; a wool hat, strong shoes, and brass buckles, two linsey jackets, and a leather apron, made out the winter apparel. This kind of dress continued to be common for the labouring people until 1750.

Yet a few, even in early times, somewhat to imitate the trim of their ancestors, laid out as much to buy one suit of fine clothes, as would have purchased 200 acres of pretty good land. The cut of a fine coat, (now antiquated,) may be worthy of description. Three or four large plaits in the skirts—wadding almost like a coverlet to keep them smooth—cuffs vastly large up to the elbows, open below, and of a round form. The hat of a beau was a good broad-brimmed beaver, with double loops, drawn nearly close behind, and half raised on each side. The women in full mode, wore stiff whalebone stays, worth eight or ten dollars. The silk gown much plaited in the back; the sleeves nearly twice as large as the arm, and reaching rather more than half way from the shoulder to the elbow—the interval covered with a fine holland sleeve, nicely plaited, locket buttons, and long-armed gloves. Invention had then reached no farther than a bath bonnet with a cape.

Something like this was the fashion of gay people; of whom there were a few, though not many in early times in Buckingham and Solebury. But the whole, or something like it, was often put on for wedding suits, with the addition of the bride being dressed in a long black hood without a bonnet. There was one of these solemn symbols of matrimony made of near two yards of rich black Paduasoy, that was lent to be worn on those occasions, and continued sometimes in use, down to my remembrance. Several of these odd fashions were retained, because *old*, and gradually gave way to those that were new. The straw plat, called the Bee-hive bonnet, and the blue or green apron, were long worn by old women.

Notwithstanding the antique and rough dresses and unimproved habits and manners that obtained among the early settlers, yet an honest, candid intention, a frank sincerity, and a good degree of zeal and energy in adhering to religious and civil principles and duties generally prevailed among the more substantial part of them.

The careful housewifery, and strict domestic discipline of many honorable mothers, has had an influential effect down to the present time; so that whatever there may have been, or that now remains as valuable traits of character in the inhabitants of these parts of the country, is chiefly owing to the virtues of the first settlers; especially in those families, (which are many,) who remain to the present time.

The first surveys in what was then called Buckingham were as early as 168—, and the greater part were located before 1703. It is now not easy to ascertain who made the first improvement; but most probably, from circumstances, it was Thomas and John Bye; and George Pownall, Edward, Henry, and Roger Hartley, Doctor Streper, and William Cooper, came early; Richard Burgess, John Scarbrough, grandfather of the preacher of that name, and Henry Paxson, were also early settlers. John and Richard Lundy, John Large, and James Lenox, and William Lacey, John Worstell, Jacob Holcomb, Joseph Linton, Joseph Fell, Matthew Hughes, Hugh Ely, and perhaps Richard Norton, came from Long Island about 1705.

The first adventurers were chiefly members of the Falls meeting; and are said to have frequently attended it, and often on foot. In the year 1700, leave was granted by the Quarterly meeting to hold a meeting for worship at Buckingham; which was first at the house of William Cooper, (now John Gillingham's.) They soon after removed to the house of James Steiper, (now Benjamin Williams's,) and in that time, and for some time after, some of those who died in the new settlement were buried on his land, I believe near the line in the old orchard: others were taken to the Falls or Middletown. In a short time they removed again, and held a meeting at Nathaniel Bye's, where his grandson Thomas Bye now lives.

Doctor James Streiper then made a deed in trust

to several Friends for ten acres of land to build a meeting-house on, and for a burying-ground, with privilege of roads five several ways or directions through his tract to go to it; and on a clear grassy spot on the west side of a path or road that went winding up the hill, they built a log meeting-house near the lower side of the present grave-yard. As their numbers increased rapidly, in the year 1710 they were united with Wrightstown in holding a monthly meeting at that place; and at some time when their log house was found to be too small, they built a frame house, a little further up. Before joining with Wrightstown, (a period perhaps with some of them of 20 years,) they are said to have been diligent in attending meetings for discipline, though at so great a distance.

It is probable that about the time of building the first house, a grave-yard was fenced in near by; this place might be preferred because clear of timber and grassy; but it was wet in winter, and very unsuitable.

About 1720, Wrightstown and Buckingham were joined, to hold a monthly meeting alternately at each place; and perhaps about that time an addition of a stone house was made to the upper end of the frame building to accommodate the women to hold their meetings of business. This arrangement continued until 1731, when a pretty large stone house was built, a little higher up the hill, and a stone addition at the upper end one story high for the women. Many Friends were then desirous of building on

the spot where the meeting-house now stands; particularly **Thomas Canby, jun.** He purchased a piece of land for the purpose of building at least on a somewhat better place than the old spot, to which the prejudices of some strongly attached them.

In this house, in 1732, **Friends of Buckingham** first held a separate monthly meeting, and perhaps quarterly and general meetings.

Friends at Buckingham meeting about that period were greatly favoured with a lively flow of Gospel ministry. **Jacob Holcomb, John Scarbrough, Samuel Eastburn, Joshua Ely, Benjamin Fell, Enoch Pearson, Edmund Kinsey, Abigail Paxson, Elizabeth Fell, Phebe Ely, formerly Phebe Smith, Jane Bradfield, Ann Scholfield,** were all ministers, and all of them at the same time members of **Buckingham** meeting, except **Jacob Holcomb** and **Abigail Paxson**, who were deceased before my memory: all the rest I can well remember, about 1750 and 1751. **John Scarbrough** was frequent and generally large in his testimonies; as was also **Isaac Child**, who appeared at **Plumstead** when quite a young man. **Nathan Preston** and **Thomas Vickers** were ministers belonging to that meeting.

In the space of time from the first improvement until 1730, perhaps a period of more than 40 years, many circumstances and occurrences may be worthy of remark, and especially the difficulty of beginning in the woods. Building a house or cabin, and clearing or fencing a field to raise some grain, were the first concerns; procuring fodder for their small

stocks was next to be attended to: for this purpose they cut grass in plains or swamps, often at several miles from home, stacked it up on the spot, and hauled it home in the winter.

One of the first dwelling houses yet remains in Abraham Paxson's yard, on the tract called William Croasdale's, now Henry Paxson's. It is made of stone, and is dug into the earth where there is a moderate descent, about 20 feet by 10 or 12. At the end fronting the south-east was a door leading into the dwelling room for the whole family, where there was a sort of chimney; and a door at the other end, also level with the ground, led into the loft which must have been the lodging room.

Until a sufficient quantity of grain was raised for themselves and the new-comers, all further supply had to be brought from the Falls or Middletown; and until 1707, all the grain had to be taken there, or to Morris Gwin's, on Pennepack below the Billet, to be ground. In that year Robert Heath built a grist-mill on the great spring stream in Solebury. This must have been a great hardship—to go so far to mill for more than 17 years, and chiefly on horseback. It was some time that they had to go the same distance with their plough-irons and other smith-work. Horses were seldom shod; and blocks to pound hominy were a useful invention borrowed from the natives. After all their care and industry to provide for the winter, they must have struggled with many difficulties, and suffered much hardship in passing over that tedious and rigorous season,

when the snow was generally deep, and the winds piercing cold.

In 1690 there were many settlements of Indians in these townships—one on the lowland near the river, on George Pownall's tract, which remained for some time after he settled there—one on James Streiper's tract, near Conkey Hole—one on land since Samuel Harold's—one on Joseph Fell's tract—and one at the great spring, &c.

Tradition reports that they were kind neighbours, supplying the white people with meat, and sometimes with beans and other vegetables; which they did in perfect charity, bringing presents to their houses, and refusing pay. Their children were sociable and fond of play. A harmony arose out of their mutual intercourse and dependence. Native simplicity reigned in its greatest extent. The difference between the families of the white man and the Indian, in many respects, was not great—when to live was the utmost hope, and to enjoy a bare sufficiency the greatest luxury.

About 1704, several new settlers arrived; among whom was my great-grandfather, Thomas Watson. His certificate is from Pardsey Cragg, in Cumberland, G. B. dated 23d, 7th mo. 1701. His wife was Eleanor Pearson of Probank in Yorkshire, and their two sons, Thomas and John. He first settled at a place then called Moncy Hill, near Bristol; and settled finally about 1703 or 1704 on Rosill's 400 acres in Buckingham.

About the same time came Joseph Fell, —

Linton, Matthew Hughes, John Hill, Ephraim Fenton, Isaac Pennington, and ——— Pickering.

Thomas Canby, for several reasons, appears to deserve especial notice. His mother's brother, Samuel Baker, was one of the early adventurers; and soon after, returning to England, brought his nephew Thomas Canby, then a lad, over with him. Being an orphan, his uncle became his guardian. He was bound by indenture to serve with him; in which they took the advice of the Quarterly meeting. After he was free he married, and settled near Robert Fletcher's in Abington. His first wife died, and he married a second wife. By these wives he had 4 sons and 11 daughters. The sons were Thomas, Benjamin, Oliver, and Joseph, who died in his minority. Several of the daughters married as follows:

Sarah, to John Hill; Esther, to ——— Stapler, afterwards to John White; Phebe, to Robert Smith, afterwards to Hugh Ely; Elizabeth, to Thomas Lacey; Mary, to Joseph Hamton; Rebecca, to Samuel Wilson; Jane, to Thomas Paxson; Martha, to James Gillingham, afterwards to Joseph Duer; Lydia, to John Johnson. Ann and Rachel died single.

Thomas Canby removed and settled on a part of Lundy's tract in Buckingham, on which he built a stone house one story high, with a hip roof, now belonging to Joshua Anderson. This he sold to Samuel Blaker, and purchased Scarbrough's tract in Solebury, where his two sons Thomas and Ben-

jamin built houses, having purchased of their father. This now belongs to Matthias Hutchinson and John Scarbrough.

Thomas himself removed to Heath's mill, which he purchased in company with Anthony Morris of Philadelphia. Here he married a third wife, and for some time carried on business at the mill. His son, Oliver Canby, having that land and stream where the Brandywine mills are now erected, the old man removed there also; but returned back, and died at Solebury in the year 1742.

He was a lively, active man, of plain, sound understanding, a good constitution, and qualified to carry on business with spirit. He maintained a strict discipline in his family; and it is remarkable, that nearly all his children were happily matched, and that many reputable families have sprung from him as an original ancestor.

My great-grandfather, Thomas Watson, followed malting in England; but from original curiosity in his mind, he became acquainted with several of the books which were then in request in surgery, physic, and chemistry; and, settling here where no practitioner resided for many miles, he by degrees became in high esteem as a doctor. It is reported that he was very successful in setting broken bones, and curing scald heads, old ulcers, and disorders in general. He was the original inventor of the spicy anodyne, called Watson's black drops; which is an excellent medicine. After his decease, which I suppose was in 1731 or 1732, his son, John Wat-

son, with much better opportunity of acquiring medical knowledge, took his father's place as the only doctor for 20 miles in every direction. He was much improved by an intimate acquaintance with doctors Bond, Jones, Kearsley, Owen, and others, during 16 years of his attendance as a member of assembly at Philadelphia. He was possessed of an uncommonly sociable disposition, and strong powers of mind; he pursued a rational method, and was very successful in his practice. He died in 1760.

Thomas Watson, eldest son of Thomas Watson, died before his father; leaving several children, who all died young, except John and Sarah. John Watson was sent to school, and procured a greater stock of learning than was common in those times. He became the deputy surveyor in this county; and by the force of a suitable docility of mind and quickness of perception, rather than from constant application, he acquired among learned men the character of a great scholar. At the time of his decease, which was in 1761, he was employed in company with Purdie and Dixon in running the line between Pennsylvania and Maryland. Being seized with the influenza, and having taken cold while in a fever, and in extremely hot weather, he rode upwards of 60 miles in a day to William Blackfan's, where he died.

Henry Paxson, not the same who is marked as a first purchaser also, but perhaps his brother's son, was an early inhabitant, (in 1729 or sooner.) He had a large family of children, two sons, and

eight daughters, who married to the following persons, to wit :—

Thomas Hartley, Matthew Beans, Henry Roberts, D. Doan, Joseph Duer, Timothy Beans, Jonas Preston, Thomas Paxson. His sons were Henry and Thomas.

Samuel Wilson married Rebecca Canby; they had 14 children, one died young; six sons and seven daughters. The daughters married as follows:

Joseph Eastburn, Jonathan Fell, Hugh Ely, Joseph Fell, Robert Kirkbride, Joshua Morris.

These examples show what a great number of the present inhabitants have arisen from a few original stocks.

Samuel Wilson's children have all been married, and are all living, except Thomas.

While the land was fresh and new, it produced good crops of wheat and rye; from 15 to 25 or 30 bushels per acre.

It appears in an old account book of my grandfather, Richard Mitchel's, who had a grist-mill and store in Wright's town, from 1724 to 1735, that his charges are as follows:—wheat from 3s. to 4s.; rye one shilling less; Indian corn and buckwheat, 2s.; middlings, fine, 7s. and 8s.; coarse, 4s. 6d.; bran, 1s.; salt, 4s.; beef, 2d.; bacon, 4d.; pork was about 2d.

Improved land was sold generally by the acre, at the price of 20 bushels of wheat. Thus, wheat 2s. 6d., land 2l. 10s.; wheat 3s., land 3l.; wheat 3s. 6d., land 3l. 10s.; wheat 5s., land 5l.; wheat

7*s.* 6*d.*, land 7*l.* 10*s.* ; wheat 10*s.*, land 10*l.* When provender could be procured to keep stock through the winter, milk, butter, and cheese became plenty for domestic use. Swine were easily raised and fattened. Deer, turkeys, and other small game made a plentiful supply of excellent provision in their season. Roast venison and stew-pies were luxurious dishes, which the hunter and his family enjoyed in their log cabins with a high degree of pleasure.

Having generally passed over the era of necessity that attended the first settlement about 1730, and for some time before, they mostly enjoyed a pretty good living, were well fed, clothed, and lodged ; and though all was in the coarse way, yet their fare was wholesome and nourishing, their clothes fine enough for labouring people, and no doubt they slept as sound on chaff beds on the floor in the loft, as they could have done with all the finery that the inventions of later days have introduced. The domestic management that fell to the share of the women was generally well ordered. As soon as wool and flax were raised, they manufactured good linen of different kinds and degrees of fineness, drugget, linsey, worsted, &c. sufficient to clothe themselves and families ; were very industrious and frugal, and contented to live on what their present means afforded, and were generally well qualified to make the most proper use of what they had.

Notwithstanding the engagements at home, and the difficulty of travelling in those early times, yet

visits of friendship were frequent, not only to relations, but others. On these occasions, cider, me-theglin, or small beer, toast of light biscuit made of fine wheat flour, and milk, butter, cheese, custards, pies, made an afternoon's repast. Chocolate was sometimes used; and in lack of other materials, the toast was sometimes made with rum and water. For common living, milk and bread, and pye, made the breakfast; the milk being boiled, and sometimes thickened in winter; good pork or bacon, with plenty of sauce, a wheat flour pudding, or dumplings, with butter and molasses for dinner; and mush or hominy with milk and butter and honey, for supper. Pies of green or dried apples were the universal standard of good eating, especially with children. When milk was scarce, small-beer thickened with wheat flour and an egg, or cider in that way, made an agreeable breakfast.

The new stone meeting-house being built about 1731, several stone dwelling-houses were built about that time and soon after; as Joseph Fell's, Thomas Canby's, John Watson's, Joseph Large's, and Henry Paxson's. Several frame houses were also built, enclosed with nice shaved clapboard, plastered inside. One of these yet remains standing on Thomas Watson's land, now John Lewis's. The boards for floors and partitions were all sawed by hand, and the hauling done with carts and sleds; as there were not many, if any, wagons at that early period.

Wheat was the principal article for making mo-

ney. Butter, cheese, poultry, and such articles were taken to market on horseback. There were but few stores in the neighbourhood, and those kept but few articles.

Most of the original tracts were settled and improved before 1720, and in 1730 the lands up the Neshamony and in Plumstead were settled; and in New Britain by Welsh generally. Large fields were cleared and pretty well fenced; low and swampy land was cleared out for meadow; and but little seed of any kind of foreign grass was sown, as the plough was seldom used to prepare for meadow; and red and white clover were only propagated by manure after they were first somehow scattered about on the new settlement.

From 1730 to 1750, as the people were industrious, the land fresh and fertile, and seasons favourable, their labours were blessed with a plentiful increase; so that many plain dwelling houses and good barns were built, convenient articles of household furniture were added by degrees, and by the means of productive labour, moderate riches increased insensibly. The winter of 1740-41 was very severe. The snow was deep, and lay from the latter end of December to the fourth of March; and in the period above mentioned, there was generally more snow, and that lay longer on the ground through the winters, than of latter years. Easterly storms of pretty heavy rain, lasting mostly two or three days, were also much more frequent.

Northern lights, I believe, are not so common of

late years as formerly; but of this I am not certain.

Houses for keeping school in were very few, and those poor, dark, log buildings; the masters, generally, very unsuitable persons for the purpose; and but little learning obtained at school. Schooling was 20 shillings a year, and the master boarded with the employers.

Indian corn, not being an article of trade, was not attempted to be raised in large quantities before 1750, nor until some years after. It was dressed by ploughing and harrowing between the rows, the hills all moulded nicely with the hoe when the corn was small, and, after ploughing, hilled up again with the hoe. For wheat, open fallows were preferred, which were generally ploughed three times during the summer; but in this way, unless corn and buckwheat had preceded, the blue grass, not being killed, became injurious to the crop. Hence, what was called double cropping became common; which is sowing oats on the corn-stalk and buckwheat ground, and then sowing wheat in the fall. This practice effectually killed the grass, and impoverished the land; large fields being sown, and but small portions manured. Liming answered a good purpose, which kept the soil in better heart; but, on the whole, wheat crops were on the decline, growing poorly in the fall, being eaten by lice or small flies; and, in wet land, being frozen out by the winter. Mildew and rust sometimes destroyed it near harvest. On all these accounts, spring grain was

more cultivated; and as horses, cattle, and pork, bore a better price, served in part to make up the deficiency. But the land generally suffered by a bad method of farming.

Before this time, no cross occurrence happened materially to disturb the general tranquillity; every thing, both public and private, went on in an even and regular routine; moderate wishes were fully supplied; necessaries and conveniences were gradually increased; but luxuries of any kind, except spirituous liquors, were rarely thought of, or introduced; either of apparel, household furniture, or living. Farm carts were had by the best farmers. Thomas Canby, Richard Norton, Joseph Large, Thomas Gilbert, and perhaps a few more, had wagons before 1745; and a few two-horse wagons from then to 1750 were introduced; and some who went to market had light tongue-carts for the purpose. These were a poor make-shift, easily upset, the wild team sometimes ran away, and the gears often broke. John Wells, Esq. was the only person who ever had a riding chair. He and Matthew Hughes were the only justices of the peace, except Thomas Canby, who held a commission for a short time: and there were no taverns in the two townships, except on the Delaware at Howell's and Coryell's ferries, (which was owing probably to the disposition and manners of the inhabitants,) and but one distillery a short time.

The preceding account will apply with general propriety to the state of things until 1754, when a

war began between England and France concerning lands on the west and north-west of Pennsylvania. Colonel Washington was defeated and taken prisoner on Wills's creek; and, in the ensuing summer General Braddock was defeated and killed in that country. When the Indians attacked the frontiers of this province, four or five hundred thousand pounds were granted in a few years for the king's use; money was also sent in from England to purchase provisions, and in general the war introduced a more plentiful supply of cash. Trade and improvements were proportionably advanced; the price of all kinds of produce was increased, wheat was from six shillings to a dollar a bushel, and a land tax was raised to sink the debt; yet the burden was not sensibly felt, as there was such an increasing ability to bear it.

As the quantity of cash increased during the war, so also there was a much larger importation of foreign goods. Bohea tea and coffee became more used, which were not often to be found in any farmer's house before 1750. Tea, in particular, spread and prevailed almost universally. Half silks and calico were common for women's wearing; various modes of silk bonnets, silk and fine linen neck-handkerchiefs; in short, almost every article of women's clothing were foreign manufacture. The men wore jackets and breeches of Bengal, nankeen, fustian, black everlasting, cotton velvet, as the fashion of the season determined the point, which changed almost every year. Household furniture was added

to, both in quantity and kind; and hence began the marked distinction between rich and poor, or rather between new-fashioned and old-fashioned, which has continued increasing ever since. The first beginning was by imperceptible degrees; I believe tea and calico were the chief initiating articles. Tea was a convenient treat on an afternoon's visit, easily gotten ready at any time; and calico a light, agreeable dress that would bear washing. On the whole, present calculation, on the first cast, decided against homespun of almost every kind, and in favour of foreign manufactures, which were to be had in the city, or in country stores, so cheap, and often on credit.

The subject of old and new fashion bore a considerable dispute, at least how far the new should be introduced. Some showed by their practice that they were for going as far as they could; some stopped half way; and a few trying to hold out as long as they could, were not to be won upon by any means more likely to prevail than by the women, who had a strong aversion to appearing singular; so that at the present time, and for these twenty years past, there are but few men, and fewer women, left as perfect patterns of the genuine old-fashioned sort of people.

THE author of the preceding relic died recently, in Bucks County, at an advanced age. He was, as may be easily inferred from the text, one entirely

unaccustomed to literary composition, and of a defective education. Nevertheless, the amount of matter which the piece contains, calculated to interest either the local antiquary or the student who delights in surveying that process by which a vigorous, intelligent, and industrious population is formed, constituting the strength of such a country as America, has led the Committee of Publication to conclude on its insertion, in all the *naïf* sincerity of the original.

John Watson, for he was not, as may readily be supposed, a medical graduate, was a man of unquestioned moral character. His pretensions to the Esculapian art were of that species which are elicited by necessity, in a new and remote country. He spent much of his time in doing good; living upon his farm, and by no means confining his attention to the practice of medicine. His honest and well-earned reputation, as an upright citizen and a healer of differences, will long dwell in the memories of the substantial land-holders of the district he describes. The Historical Society have long had it in view to collect monographic descriptions of the different counties and other important districts of our state. Besides the local interest, which, in a land where the whole population are lords, and where every plantation has been the scene of a recent and romantic adventure, must always exist to a powerful degree, such collections furnish abundant food to the philosophical politician, and a copious fund of materials to the future writer who shall prepare

a historical and geographical account of our community. The Committee earnestly hope that the example set by the publication of the foregoing will draw forth from many minds equally active with that of its author, but better furnished with the qualifications of a writer, those contributions which are desired.

*** The words *shell* and *red-shell*, presumed to be a corruption of the old mineralogical term *shale*, are familiarly used in the neighbourhood to express a species of clay-slate, crumbling into small parallelopipeds.

A
BRIEF ACCOUNT

OF THE

DISCOVERY OF ANTHRACITE COAL

ON THE

LEHIGH.

BY THOMAS C. JAMES, M. D

Read at a Meeting of the Council on the 19th of April, 1826.

A BRIEF ACCOUNT, &c.

As the brief Account of the Discovery of the Anthracite Coal on the summit of the Mauch-Chunk Mountain seemed to engage the attention of some of the members of the Historical Society on one of the evenings of the meeting of their council, and as it has been thought worthy of preservation, the writer of the following little narrative feels no objection to commit it, notwithstanding its imperfection, to paper, although the circumstances detailed occurred at such a distance of time as must plead an excuse for imperfect recollection.

It was some time in the autumn of 1804 that the writer and a friend* started on an excursion to visit some small tracts of land that were joint property on the river Lehigh in Northampton county. We went by the way of Allentown, and, after having crossed the Blue Mountain, found ourselves in the evening unexpectedly bewildered in a secluded part of the Mahoning Valley, at a distance, as we feared, from any habitation; as the road became more narrow, and showed fewer marks of having been used, winding among scrubby timber and underwood. Being pretty well convinced that we had

* Anthony Morris, Esq.

missed our way, but, as is usual with those who are wrong, unwilling to retrace our steps, we nevertheless checked our horses about sun-setting, to consider what might be the most eligible course. At this precise period, we happily saw emerging from the wood, no airy sprite, but, what was much more to our purpose, a good substantial German-looking woman, leading a cow laden with a bag of meal, by a rope halter. Considering this as a probable indication of our being in the neighbourhood of a mill, we ventured to address our inquiries to the dame, who in a language curiously compounded of what might be called high and low Dutch, with a spice of English, made us ultimately comprehend that we were not much above a mile distant from Philip Ginter's mill, and as there was but one road before us, we could not readily miss our way. We accordingly proceeded, and soon reached the desired spot, where we met with a hospitable reception, but received the uncomfortable intelligence that we were considerably out of our intended course, and should be obliged to traverse a mountainous district, seldom trodden by the traveller's foot, to reach our destined port on the Lehigh, then known by the name of the *Landing*, but since dignified with the more *classical* appellation of Lausanne. We were kindly furnished by our host with lodgings in the mill, which was kept going all night; and as the structure was not of the most firm and compact character, we might almost literally be said to have been rocked to sleep. However, after having been re-

freshed with a night's rest, such as it was, and taking breakfast with our hospitable landlord, we started on the journey of the day, preceded by *Philip*, with his axe on his shoulder, an implement necessary to remove the obstructing saplings that might impede the passage of our horses, if not of ourselves; and these we were under the necessity of dismounting and leading through the bushes and briars of the grown-up pathway, if pathway had ever really existed.

In the course of our pilgrimage we reached the summit of the Mauch-Chunk Mountain, the present site of the mine or rather quarry of Anthracite Coal; at that time there were only to be seen three or four small pits, which had much the appearance of the commencement of rude wells, into one of which our guide descended with great ease, and threw up some pieces of coal for our examination; after which, whilst we lingered on the spot, contemplating the wildness of the scene, honest *Philip* amused us with the following narrative of the original discovery of this most valuable of minerals, now promising, from its general diffusion, so much of wealth and comfort to a great portion of Pennsylvania.

He said, when he first took up his residence in that district of country, he built for himself a rough cabin in the forest, and supported his family by the proceeds of his rifle, being literally a hunter of the back-woods. The game he shot, including bear and deer, he carried to the nearest store, and exchanged for the other necessities of life. But, at the parti-

cular time to which he then alluded, he was without a supply of food for his family, and after being out all day with his gun in quest of it, he was returning towards evening over the *Mauch-Chunk* mountain, entirely unsuccessful and dispirited, having shot nothing; a drizzling rain beginning to fall, and the dusky night approaching, he bent his course homeward, considering himself as one of the most *for-saken* of human beings. As he trod slowly over the ground, his foot stumbled against something which, by the stroke, was driven before him; observing it to be *black*, to distinguish which there was just light enough remaining, he took it up, and as he had often listened to the traditions of the country of the existence of coal in the vicinity, it occurred to him that this perhaps might be a portion of that "*stone-coal*" of which he had heard. He accordingly carefully took it with him to his cabin, and the next day carried it to Colonel Jacob Weiss, residing at what was then known by the name of Fort Allen. The Colonel, who was alive to the subject, brought the specimen immediately with him to Philadelphia, and submitted it to the inspection of John Nicholson and Michael Hillegas, Esqs. and Charles Cist, an intelligent printer, who ascertained its nature and qualities, and authorized the Colonel to satisfy Ginter for his discovery, upon his pointing out the precise spot where he found the coal. This was done by acceding to Ginter's proposal of getting through the forms of the patent-office the title for a small tract of land which he supposed had never been taken

up, comprising a mill-seat, on which he afterwards built the mill which afforded us the lodging of the preceding night, and which he afterwards was unhappily deprived of by the claim of a prior survey.

Hillegas, Cist, Weiss, and some others, immediately after, (about the beginning of the year 1792,) formed themselves into what was called the "Lehigh Coal Mine Company," but without a charter of incorporation, and took up about 8 or 10,000 acres of, till then, unlocated land, including the Mauch-Chunk mountain, but probably never worked the mine.

It remained in this neglected state, being only used by the blacksmiths and people in the immediate vicinity, until somewhere about the year 1806, when William Turnbull, Esq. had an ark constructed at Lausanne, which brought down two or three hundred bushels. This was sold to the manager of the Water-works for the use of the Centre-Square steam-engine. It was there tried as an experiment, but ultimately rejected as unmanageable, and its character for the time being *blusted*, the further attempts at introducing it to public notice, in this way, seemed suspended.

During the last war, J. Cist, (the son of the printer,) Charles Miner, and J. A. Chapman, tempted by the high price of bituminous coal, made an attempt to work the mine, and probably would have succeeded, had not the peace reduced the price of the article too low for competition.

The operations and success of the present Lehigh

Coal and Navigation Company must be well known to the society; the writer will therefore close this communication by stating, that he commenced burning the Anthracite Coal in the winter of 1804, and has continued its use ever since, believing, from his own experience of its utility, that it would ultimately become the general fuel of this, as well as some other cities.

T. C. J.

Philada. April 13th, 1826.

The following shows the quantity of coal sent from Mauch-Chunk to Philadelphia by water in the years specified, viz :—

| | | | | |
|---------|---|---|---|-----------------|
| In 1820 | - | - | - | 16,000 bushels. |
| 1821 | - | - | - | 32,000 do. |
| 1822 | - | - | - | 80,000 do. |
| 1823 | - | - | - | 230,000 do. |
| 1824 | - | - | - | 500,000 do. |
| 1825 | - | - | - | 516,236 do. |

In half the season, up to August 10th, 1826, there descended to Philadelphia 20,260 tons, equal to 567,280 bushels, which is a greater amount by 51,044 bushels than descended in the *whole* of the year 1825.

During the last year, 750,000 bushels have been actually sold by the company, as the writer is informed by the secretary of the company.

SOME EXTRACTS

FROM

PAPERS IN THE OFFICE

OF THE

SECRETARY OF THE COMMONWEALTH,

AT HARRISBURGH,

AND FROM OTHER DOCUMENTS

TRANSCRIBED

BY REDMOND CONYNGHAM, Esq.

OF CARLISLE.

And communicated by him to the Society

Read at a Meeting of the Council, March 15, 1826.

SOME EXTRACTS, &c.

Notes of some Principal or Curious Events.

1682. WILLIAM PENN visited Shackamaxon, held frequent conferences with the Indians, and here laid the foundation of that regard and friendship which they ever afterwards evinced. It was by his residence in Shackamaxon, (now Kensington,) that he was enabled from actual observation to describe the Indian character. (See Letter dated August 16th, 1683.)

William Penn held his most important interview with the Indian Chiefs under the shade of the great elm on the 14th of October, 1682.

1746. Abraham Shalley, keeper of the work-house in the city of Philadelphia, was paid by the government for dieting a Spanish friar sixty-three days.

Many of the emigrants from England were induced to take their proportions of British purchasers on the west side of Schuylkill, thinking that the Schuylkill front would be found on experience the most safe and convenient; but the traders afterwards ascertained that the Delaware, on account of

its size and depth, held forth much stronger inducements for settlement; and they, therefore, applied for an abatement in the price of their lands.

1749. It is remarkable that in this year there was but one house in Reading—and in 1752 it contained one hundred and thirty dwelling-houses, forty-one stables, and one hundred and six families, consisting of 378 persons.

The rapid improvement of this town was owing to its eligible site on the Schuylkill as a place of trade.

1755. The settlement at Great Cove, in the county of Cumberland, destroyed by the Indians.

1757. William West authorized to establish a post between Carlisle and Philadelphia once a week if practicable.

1757. Teedyuscung, on behalf of his Indian tribe, agreed with the Governor, as by the treaty at Easton, that Wyoming should be allotted to them for a residence which it should not be lawful for them ever to sell, or for the proprietaries to buy. It was intended that king Teedyuscung and his Indians should hold and enjoy the lands during their lives, and their posterity after them. Houses were put up for them by order of government.

1760. March 17th. Snow fell four feet in depth.

1761. Garrison at Fort Allen discharged by order of the Governor.

1765. Episcopalians at Reading apply for a lottery to build a church.

1767. Presbyterians commence building a meet-

ing-house in Lancaster ; they apply for a lottery to finish it.

1768. In January, Frederick Stump and John Ironcutter murdered ten of the friendly Indians near Fort Augusta. The following is a letter from the Indian Chief :—

“ *Loving Brother,*

“ I am glad to hear from you—I understand you are very much grieved, that tears run from your eyes—with my blanket I wipe away those tears—if your heart be not at ease I will make it tranquil—now shall I sit down again and smoke my pipe—I hold one end of the chain of friendship—if my brother let go the other end I will let my end fall, but not until then—four of my blood have been murdered—let Stump die—your people are good—Stump only possesses the evil spirit—let then the people on Juniata remain at peace—danger is not abroad—the Red Men are at rest.

“ Your loving brother,

“ SHAWANA BEN.”

From the Big Island, to Capt. Patterson, }
at Juniata. }

1767. *Instances of Longevity.* This year died Edward Norris in Virginia, aged 103. He was seventy years pilot within the Capes.

In Maryland, Francis Ange, aged 134 years. He remembered the death of Charles the First ; at the age of 130 was in perfect health ; and at the time of his death his faculties were perfect and memory strong.

Died in Pennsylvania, aged 85, John Key. William Penn gave him a lot of ground in compliment of his being the first born in the city of Philadelphia.

This year was also remarkable for the mortality among horses, which prevailed throughout the British provinces.

Bethlehem and Nazareth.

In the year 1741, the Rev. George Whitefield, on his return to Pennsylvania from Savannah, was desirous of forming a settlement of free blacks in the interior of Pennsylvania, and he accordingly purchased two tracts of land, each containing four thousand acres; but after having made the purchase, finding the white population unfriendly to his views, he disposed of the land to the United Brethren, who, in the year 1743, held worship in a stable erected by Whitefield, and from that circumstance called the place Bethlehem. This tract is about one quarter of a mile wide on each side of the clear white waters of the Leebai. On the other tract they built a town called Nazareth, nine miles distant.

The European settlers were in those days few and thinly scattered around them.

Singular Rules observed by the Moravians.

The adult unmarried men and boys upwards of twelve years of age in the settlement of the United Brethren live mostly together, in a house called "The Choir-house of the Single Brethren." Thus

also the adult unmarried women and girls upwards of twelve years of age, inhabit "the Choir-house of the Single Sisters." There are Choir-houses for widows and widowers.

Marriages in the congregation of the United Brethren are made by general agreement, with the advice and approbation of the elders of the congregation. Whenever a Brother wishes to marry, he in the first instance signifies his intention to the elders. If they have no objection, his proposal is submitted to the Lot. If the question proves affirmative, and the sister proposed, and her parents all give their approbation, the wedding is performed.

At the baptism of children both the witnesses and the minister bless the infant with laying on of hands.

The pediluvium, or washing of feet, is used by some, agreeably to the command of Christ, "Ye also ought to wash one another's feet."

The most singular custom is the assembling of the congregation in their respective burying grounds on Easter morning at sun-rise; when the Litany is performed.

The school at Bethlehem is for girls; that at Nazareth for boys.

The United Brethren are remarkable for their honest simplicity of manners, industry, economy, and neatness in their habitations—kind and affectionate to each other, living as brothers and sisters. They are considered a great acquisition to the province.

* * * I have taken the above from documents in my possession.

INDIAN SPEECHES, &c.

1. *To Sir William Keith.*

1724. *Indian Chief.*—"Father, when Onas landed, we formed perpetual friendship—he gave us land on the Brandywine—we cannot take away our corn—the white men have sat down amongst it—they have stopt up the river—we are poor—we fish—we hunt—when the men hunt, the women and children take their bows and arrows and kill the fish in the shallow stream—the water is dark and deep—Father we ask you to tell the white men to pull away the dams that the water may flow—that the fish may swim."

2. *Conoquiescon's Speech, in 1770.*

"We delight not in war—we love peace—our people have been robbed and murdered and no reparation—we receive wrong and no reparation—if the aged warrior is silent the young will speak—revenge cannot be still—hurt those who hurt us—you told us we should fish and hunt in peace—open our eyes that we may see those good things."

3. *A Cayuga Chief—1771.*

"When in the wigwam we think of you—we know the road we have travelled and the path we have walked together—it is the road of love—it is the path of friendship—we have come in safety—we see the old Council Fire which was kindled by our fathers—it burns bright and clear—clear your eyes

that you may see us—open your mouths—whiten your hearts—unfasten your ears—hearken—the first fire burned clear and bright—another fire has been kindled—but both are gone out and the path to our brothers was difficult to find—our fathers held the chain of friendship—evil men have tried to break it, but we hold it fast—we looked at Wyoming—we saw white men from the rising of the sun—what do they do there—we did not give them the land—who are we—we are Shawanese, Delawares, Mohicans, Nantikokes and Conoys—we gave the land to Onas—Onas gave us a little spot on which we might rest.”

Shawana Ben spoke as follows :

“We were told when we were tired of our land we might leave it—we are tired—we wish to sell it—we are tired of the Big Island—our tomahawks and our muskets are dark—make them brighter—some of us are old—give them horses—Brothers, let us now go back in peace, as we have had our talk.”

NOTE.—The Cayuga warrior alludes to the settlement of the valley of Wyoming by people from New England.

* * The foregoing were copied from original manuscripts in the office of the secretary of the commonwealth.

4. Council at Easton.

1759. October 11th. The Indian Chiefs, and governor Bernard and governor Denny in council. Mohawks, Oneidas, Onondagoes, Cayugas, Senecas, Tuscaroroes, Nanticokes, Conoys, Tuteloes, Chugants, Delawares, Unamines, Munseys, Mohicans, Wappingers.

Teedyuscung. “I called—the Indians have come—Speak and they will hear—sit and talk—I will sit, hear, and see.”

Tokuaio, Chief of the Cayugas.—“I speak for the Cayugas, Oneidas, Tuscaroroës, Tuteloës, Nanticokes, and Conoys. A road has been opened for us to this Council Fire—Blood has been spilt upon that road—by this belt I wipe away that blood—I take the tomahawk from off your heads.”

Nichas then spoke.—“Teedyuscung has said he is our chief—we know him not—if he be our king who made him so—have you done it?—say yes or no.”

Tagashata.—“We know not who made him our king.”

Assarandonguas.—“No such thing was ever said in our wigwam that Teedyuscung was our king.”

Henry King.—“I speak for the Oneidas, Cayugas, Tuscaroras, Nanticokes, and Conoys. We say boldly he is not our king.”

Governor Denny.—“You say that Teedyuscung said he was your king—he met us in the council fire at this place last year—we considered him your representative, not your king—he said he was not your king—he called the six nations his uncles.”

Governor Bernard.—“I do not know that Teedyuscung is a greater man than any of your chiefs.”

Teedyuscung now spoke.—“You placed us at Shamokin and Wyoming—you have sold that land—I sit like a bird upon a bough—I look around and know not where I may take my rest—let me

come down and make that land my own that I may have a home for ever."

Governor Denny.—"We will settle matters."

Nichas spoke.—"Settle matters—those things are in the dark—place them in the light—the proprietaries have our deeds, show them to us and we will know our marks."

Governor Bernard then said he had something to say.

Tagashata said, "One governor at a time—we will not hear both speak."

A deed being produced—

Nichas again spoke.—"This deed we remember—we sold the land—the land was our own—all things are right."

A member of the Pennsylvania council then observed—"Teedyuscung asks us to make you owners of the lands at Wiomink and Shamoking—we have no power to sell those lands—your request shall be laid before the proprietary."

Teedyuscung replied, "Onas will grant our request—we trust in him—we know him—he loves justice—we are satisfied."

* * The above is taken from a rough draught in the office of the secretary of the commonwealth.

5. *Warriors of Oneida to the Chief Warrior of Arahoctea. 1777.*

Sucknagearat, White Skin, and Ojestatara, Grasshopper :—

"Good news—great news—the English warriors

who were to have made a wide road through the woods have fallen into a deer trap—this is war—those who hold up their heads like the pine of the wood are soonest laid low by the storm—it is true—it is right—we rejoice, it makes glad our hearts.”

6. *Warrior of Onondago to the Chief Warrior of Arahoctea.*

Tehewgweahthen, chief warrior of Onondago :—

“Your voice has come upon our ears—your belt has brought the good news—we rejoice in your success—the English were strong but now weak—we rejoice—we knew they would fall—he held up his head above our warriors—he treated our brothers with contempt—he told us what he would do—he laughed at our brothers as little men.

He sent his warrior to Fort Schuyler—they held up their heads too high—too high—‘that they would trample all down before them, and at first sight of them the fort would vanish.’ These high heads now lay low—pride is punished—it is right.

Brothers, we have sent your belt of good news to the Cayugas and Senecas—it flies on feet and on horse—it spreads far—it will reach Niagara—brothers we have done, we wish you success.”

These foregoing were made to General Gates on hearing of the capture of General Burgoyne.

7. *Speech of Kiashuta, the Mingo Chief at Fort Pitt ; July 6th, 1776.*

“*Brothers*—I went to the great council at Niagara—I was stopt at Cannywagoe—the General sent to

the Red Men not to come 'till he should come from Detroit'—eight hundred warriors were with me at Cannywagoc—news came to our ears the Council Fire had gone out, but we went to Niagara—I opened my mouth—I had come far—I was weary—he told me—he could not sit—he could not talk—Brother—We will not let the English through our hunting grounds—should they attempt it—we raise the tomahawk—we sharpen our knives—I command the west side of the Ohio—no white man shall cross our hunting grounds—if any mischief be done—lay not the blame on the old wild cat of the forest—but on the active fawn—blame not the aged warrior who is still, but the young who is like a kitten.” Kiaschuta then turned to Captain Pipe a Delaware Chief—

“Be strong—be firm—be on your feet—darken not your eyes—let them shine—throw not the tomahawk—raise not the knife—let the whites cut the string of friendship—but until they cut it we will hold it fast—we rejoice the Council Fire has not gone out—brother, we desire to keep the hatchet buried—we desire peace—I have had my talk—give me tobacco, I will sit and smoke.”

CONTRIBUTIONS
TO
THE MEDICAL HISTORY
OF
PENNSYLVANIA.

BY CASPAR MORRIS, M. D.

Read before the Medical Committee, 5th Month 22d, 1826.

CONTRIBUTIONS, &c.

ALTHOUGH it is with feelings of diffidence I have ventured this evening to address you, I shall not attempt to apologize, since it is done in the hope to form a starting point, and encourage others, better qualified than myself, to come forward, rather than from any expectation of being able to contribute materially either to your instruction or amusement. From the many subjects demanding investigation, which have been allotted to us by the Society, I have selected one which is involved in much obscurity, and have collected such facts in connection with it as circumstances have placed in my power.

Considerable difficulty must, necessarily, attend any attempt to elucidate the early medical history of this country; as but few physicians capable of transmitting to posterity an account of the diseases they were obliged to encounter, and the means found most effectual to their relief, would be willing to forego the comforts and advantages of civilized society, to plunge into the dangers and difficulties attendant on an attempt to people the wilderness, and bring the forest under cultivation: and though, from peculiar circumstances attending the settlement of this colony, Pennsylvania seems to have enjoyed the skill of several accomplished and well-educated

physicians, I am not able to trace a single paragraph, now extant, in which they have attempted to detail either theory or practice, prior to the year 1740. It is true that the same rage for book-making did not then exist as at present, and no periodical journal offered its pages for short essays, such as men engaged in extensive practice can find time to compose: and most probably could we have access to private letters written to their friends at home, we might there find much information. For the facts contained in the following essay, I am indebted to traditionary report, and notes made in desultory reading. From a letter kindly loaned me by my friend, Dr. James, received by him from John F. Watson, of Germantown, I have derived some hints with which he shall be credited as they are mentioned. Prior to the arrival of William Penn, in 1682, even tradition is pretty much silent; and I am not aware of there having been any regular practitioners of medicine among the Swedes. Noah Webster, in his book on pestilence, mentions, that the winter of 1641 was very severe, and that the Swedes, and a colony from New Haven, who had settled among them, suffered very much in the following summer; but does not say what was the disease. In 1647 they again suffered from the influenza, which passed from the northern to the southern extremity of this continent, and is the first epidemic of the kind mentioned in our history. "Such as bled, or used cooling drinks, died; such as used cordials, or more strengthening things, recovered for the most

part." In the month of June, 1655, the whole continent was again visited by the epidemic catarrh, which was followed by other fatal diseases. "In the year 1668," says Webster, "appeared a comet with a stupendous coma; this was attended by an excessively hot summer, and malignant diseases in America."

With William Penn there emigrated two Welch gentlemen, Thomas Wynne and Griffith Owen, who appear to have been regularly educated to the profession; and Wynne is said to have practised in London. They were both members of the Society of Friends, and were much respected by their fellow emigrants; as we find them repeatedly noticed in the history of the times, and Wynne held the office of speaker of the first assembly of the free-men of the province. Some doubt exists as to whether they both located themselves in the city; and I am inclined to believe that Wynne accompanied his countrymen, who, allured by the resemblance which the tract of country now forming the townships of Merion and Haverford, bore to their native hills, generally settled west of the Schuylkill. Though neither of them has left any account of his practice, we may be allowed the inference, that with the exception of the occasional epidemics to be noticed, surgical, rather than medical skill, was had in requisition. Of one thing we are sure, that among the hardy sons of England's yeomanry, who had thus abandoned the comforts of home for conscience sake, they met with few diseases the result of idle-

ness or luxury. Generally speaking, the colonists must have enjoyed good health, as we find Wynne taking an active part in politics, and Owen travelling in the neighbouring colonies. The winter of 1697-8, seems to have been one of unusual severity, and the whole of the colonies again suffered from influenza; which, to the north, put on the form (since so well known) of pneumonia typhoides.

In the month of August, 1699, only 17 years after the arrival of the proprietor and his first colonists, we find the city devastated by a malignant disease, which was productive of distressing mortality. It is noticed in the Journals of Thomas Chalkly and Thomas Story, Ministers of the Society of Friends. The latter was then on a religious visit to this colony, and soon after received the office of Master of the Rolls. He does not enter into any detail as regards the symptoms, but notices the number of *deaths* as at one time amounting to six or eight daily. The malignant nature of the disease may be judged of, from the fact, that friends from the country were advised to come as little as possible into the city, though the time for holding the semi-annual meeting occurred during its prevalence: and it is noticed by the pious narrator as an evidence of the superintending care of Providence, that during the session of the meeting, which continued several days, "the plague was stayed." By Isaac Norris, then a merchant in Philadelphia, it is noticed in his correspondence as the "Barbadoes distemper:" though he says nothing of

its being imported; and the only symptoms he mentions are vomiting and voiding of blood. The summer had been the hottest ever known, men having died suddenly from the heat, in the harvest field. The disease commenced in the beginning of August, and abated about the 22d of October; in which time 220 persons had died. Dr. Wynne had been dead some years, and the practitioners during its prevalence must have been his son-in-law Dr. Edward Jones, who accompanied him in his emigration, and Dr. Griffith Owen, and perhaps his son, who commenced practice about this time. Dr. Owen the elder lived till the year 1717: during the latter years of his life he seems to have relinquished the toils of practice to his son, and to have sought his pleasure in making short excursions with travelling ministers, who notice him in their journals with great respect.

Connected, perhaps, as much with the present as any other branch of investigation, permit me here to notice a fact which has not, heretofore, claimed attention. Among the gentlemen accompanying William Penn on his first visit to this country was one of French extraction, who, proud to have descended from the family of the recluse of Port Royal, and to bear his honoured name, had devoted his time and fortune to the study of the abstruse sciences, among others alchemy and astrology. Soon after his arrival, having provided himself with the requisite apparatus, he commenced the vain pursuit after that which has deluded so many, the Philoso-

pher's Stone, and its necessary accompaniment, the Elixir Vitæ. The result need not at this day be told; but among the simple inhabitants of Philadelphia he was regarded as one passing wise; and his secluded habits, joined to the verification of some trifling predictions he ventured to make from reading the aspects of the stars, induced the supposition, with some, that he had made the *dire compact*: and such was the strength of this impression that his house was regarded as the haunt of unquiet spirits, which reputation it bore till within a few months, when it was destroyed to make room for more profitable tenants. His children kept an apothecary's store, in which they vended many articles the produce of their father's laboratory. About 50 years ago, an old man, who recollected the gentleman referred to, narrated to one of his descendants the foregoing circumstances; and descanting largely on his benevolence, remarked, "Ah! but he could well afford to be generous; for what was money to him who could turn lead into gold?" Upon being asked how he knew him to possess the power, he replied, "Surely he should know, since he had not only seen, but possessed, the gold so obtained." Here, however, as elsewhere, the time bestowed on this vain pursuit seems not to have been thrown away; for in addition to the amusement it afforded to one placed above the necessity of manual labour, and the benefit derived from the useful products of his alchemics, which, as before stated were sold to the inhabitants, one of his sons, profiting by the knowledge

derived from his father, and his books, produced, if not the elixir vitæ, a compound, stiled "golden drops," as indicative of their value, to this day celebrated in some sections of the country; and which, if we may credit one-third the stories told of it, has performed cures little short of miraculous; and be the compound what it may, for it is still a nostrum in the possession of one of his descendants, is effectual to the relief of most diseases with which any members of the family, who have sufficient faith in its virtues, may be afflicted. In short, it is only cause of wonder that the court of death has not, ere this, been depopulated, by the annihilation of some of his chief agents in the work of destruction.

About the time of the death of Dr. Owen, in 1717, the medical faculty was reinforced by the arrival of Drs. Kearsley and Graeme, who, with the son of Dr. Owen and Dr. Jones, son-in-law of Wynne, aided by some two or three empirics, (who amassed considerable fortunes,) formed I believe the sole defence of the city and its neighbourhood against the inroads of disease. Wearisome enough were the duties of these gentlemen; the settlements wide scattered, the roads newly made, and the means of conveyance poor. Dr. Graeme seems to have possessed a large property. The house in which he is said to have resided must have been one of "the spacious and splendid mansions" mentioned by some of our older chroniclers. He occasionally retired to Graeme Park, a handsome seat in Bucks County. Dr. Kearsley soon acquired the entire confidence of his fellow citi-

zens. During his life he was active in procuring the erection of Christ's Church, one of the most venerable ornaments of our city, and at his death, in the year 1732, he founded and endowed the hospital for poor widows attached to the church. He left a nephew also a physician, who became obnoxious to the resentment of the whig party at the commencement of the revolution, and was subjected to the cruel punishment of tarring and feathering, then occasionally resorted to; which so affected him as to cause insanity, which continued till his death.

Early in the eighteenth century there emigrated from England to Boston, a gentleman of the name of Zachary, who shortly after died, leaving an only child, Lloyd Zachary, then quite a boy, to the care of his uncle who resided in Philadelphia, to which place he was removed, and where he acquired that education which enabled him not only to shine an ornament to his profession, but also to sustain a character unsullied by reproach. Upon the completion of his classical education he was placed under the direction of Dr. Kearsley, and after acquiring all the medical information he could impart, sailed for Europe in the year 1723, where he spent three years, and returned to practise among his friends in Philadelphia. He was much beloved, and the interest he took in the hospital, of which he was first physician, is sufficiently indicative of his philanthropy. To it, whilst he was able, he devoted his time and talents, and at his death left it a handsome legacy in money and books, thus contributing to the establish-

ment of one of the many noble charities for which our city is famed. For some years before his death he was afflicted with a paralysis, which carried him to an early grave much lamented. Cotemporary with these was the elder Shippen, who was born and received his entire education in this city, where he practised during a long series of years. Nor must we pass in silence Dr. Thomas Bond, who, about the year 1734, emigrating from Maryland, fixed his residence in Philadelphia, where he soon acquired great reputation. He was associated with Dr. Zachary in the care of the hospital, and delivering clinical lectures to the few students of medicine which the city contained at the time of its establishment. There still remains to be mentioned, a gentleman, who practised at the time now under review; and who eminently deserves the gratitude of all those who take pride in the scientific character of our city. I allude to Dr. Thomas Cadwallader, the grandson of Wynne. Not satisfied with the information to be gained at home from the instruction of Dr. Jones, he spent some years in Europe, where he matured the knowledge previously acquired, and fitted himself for the distinguished rank he afterward held in the city and its vicinity. The urbanity of his manners, and his uncommon presence of mind, gained him many friends, and form the subject of many anecdotes still current among the descendants of the Welsh families in which he practised. In the year 1740, he published an essay on the iliac passion, in which he recommends the use of mild cathartics and opiates,

in preference to the drastic articles then generally employed. Unfortunately this, which is the first book on a medical subject printed in America, is now out of print: at least so far that I have been unable to procure a copy, and I am indebted for the knowledge that it ever existed to an oration delivered before the Charleston Medical Society by the late Dr. Ramsay. But his claims to our respect do not rest here. Having as before noticed, resorted to the European schools for the perfection of that education commenced under the auspices of Dr. Jones, he learned the inestimable importance of anatomical knowledge; and superior to that petty jealousy and desire to excel his fellow practitioners, which has too often cast a blot on the fair escutcheon of medicine, he resolved to impart the knowledge of the human structure to such of them as had not enjoyed the same opportunity with himself. To this end he took a house, which, from the location given to it by tradition, must have belonged to that distinguished patron of science James Logan, in which he gave lessons in practical anatomy. Among others who availed themselves of this opportunity was the elder Shippen, and it is most probable that he here acquired those ideas of the importance of the study, which induced him to press upon his son the propriety of making himself master of the science, in order to the establishment of those lectures he afterward so ably delivered.

The city seems occasionally to have suffered from the prevalence of natural small pox, and conse-

quently some means for arresting its ravages early claimed attention: and in 1731 inoculation was fairly introduced, after having struggled against the fears and prejudices of the people during nine years. Many attempts were made during this time to overcome the opposition, but ineffectually. Newspaper essays, and even sermons, were published, denouncing the practice as irreligious—evidencing a distrust of the care of Providence. J. F. Watson, in his MSS. quotes the sermon of a gentleman of the name of Maskelyne, in which he calls it “an unjustifiable art, and an infliction of an evil, implying a distrust of God’s overruling care, to procure a possible future good.” About the year 1730, it seems however to have triumphed, and we find Kearsley, Zachary, Cadwallader, Shippen, and Bond, engaged in the practice.

J. Growden, Esq.* was the first patient of note who gave it his countenance, by submitting to have the virus inserted into his own system; and the first visit paid by the ex-president Jefferson, then a lad, to our city, was in order to receive the variolous infection, and he lodged in a small cabin on the bank of the Schuylkill, while labouring under the disease.†

In the year intervening between Dec. 1729 and 30, there were interred in the city 227 persons of various sects. An account of the number of births during the same period, would be an interesting document.

* Watson’s MSS.

† Ibid.

In February, March, and April, 1727, there appears from the bills of mortality to have been an unusual number of deaths, though I have not been able to find any reference to the prevalent disorder; and in 1732 the whole country again suffered from epidemic catarrh; in 1736-7 the city was afflicted by the occurrence of ulcerated sore throat.

Sometime in the year 1740, Dr. Graeme was appointed, by the governor, physician to the port, and was required to attend the crews of unhealthy vessels. In the following year Dr. Zachary was appointed to the same station by the assembly: this gave offence to the governor and council, who confirmed the former appointment of Graeme and forbade Zachary to act.

The winter of 1740-41 was very severe, and the succeeding summer the city was visited by a disorder which Noah Webster calls the American plague, and Dr. Bond says was yellow fever, but supposes it to have been introduced by a sickly ship-load of convicts from the Dublin jail. Previous to this it had been the practice to distribute sick emigrants among the inhabitants, at whose houses they received that attention their forlorn situation demanded. In this way jail, or ship fever, was frequently communicated to the families with which they were quartered, (or it was so thought at the time,) and about this time a "Peste house" was erected on League island.* In 1747 Webster says the city again was visited by the "Bilious Plague," preceded by in-

* Watson's MSS

fluenza, which very frequently prevailed over the whole continent.

The citizens frequently suffered from bilious remittent fevers, particularly while the dock remained open. This was a creek, running from near the centre of the city plot to the Delaware, following the course of Dock street; and was navigable at high tide so far as Chesnut and Fourth streets. At low water however, its muddy bed was left exposed to the sun, and emitted a most noxious effluvium; and Dr. Bond asserts that fewer ounces of bark were taken after its closure, than pounds before. As a preventive and cure for miasmatic diseases and their sequelæ, Dr. Bond lauds highly the mild chalybeate waters which abound in the neighbourhood of the city; and by his directions they were much resorted to, both by convalescents and those who wished to escape the "bleaching ague." Many facetious stories are told of the impositions that were practised upon those, who, too unwell to walk to the springs out of the city, were directed to particular wells as possessing equal virtues. These springs seem early to have claimed attention, and were thought by the first settlers to equal the most celebrated spas of Europe. So early as the year 1722, the one now known as the Yellow Spring, in the Great Valley, was discovered, and much resorted to. There was one in the neighbourhood of the Wind-gap in the Blue Mountain, which on the early maps of the state was called the Healing Spring, and marked by the representation of a number of

tents pitched round it. There was another, situate near Bristol; and in the Watson MSS. one is noticed, situate near where the Globe Mill now stands, which received the patronage of William Penn, who caused accommodations for visitors to be erected, and hoped to see a village collect round it, which in anticipation he named Bath.

Having thus sketched a few rough notices of such facts as have come to my knowledge in reference to the Medical History of the province, prior to the year 1750, I now submit them to your consideration, in the hope, as before stated, to elicit further information. Our subsequent history may be more easily determined, and should not some one more competent to the task step forward, shall form the subject of a future communication from the author of the preceding.

NOTICES
OF
NEGRO SLAVERY,
AS
CONNECTED WITH
PENNSYLVANIA.

BY EDWARD BETTLE.

*Read before the Historical Society of Pennsylvania, 8th mo.
7th, 1826.*

NOTICES, &c.

WE trust we shall not indulge hopes too sanguine, if we should now anticipate, that by the united labours of our Society, Pennsylvania will receive that illustration of her annals, character and resources, which has so long been due to a state whose history in many important features is unique, and whose moral conduct exhibits lessons the most instructive, and examples the most encouraging, of active practical benevolence, and the positive application of the principles of Christianity to the administration of human affairs.

When we look at the history of Pennsylvania, as exhibited in the various important advances made by her citizens towards meliorating the condition of the oppressed and injured of the human race, and the relief of the miseries which crime has brought upon our species, our recollections are far more exalted and enduring, than if we could boast our descent from the most illustrious warriors and heroes whose names have been emblazoned on the historic page.

A century and a half have now nearly elapsed since the great sage and lawgiver of Pennsylvania landed on her shores, and gave the first impulse to that spirit of Christian philanthropy which has ever

since continued, amid the wars and miseries of the old world, to shed its light and diffuse its warmth from the sanctuary of our native soil; and it is not the mere vaunt of egotism or the idle declamation of a contracted mind, to assert, that from the humble and unpretending efforts of this youthful member of the commonwealth of nations have arisen many of those plans of benevolence which are now adopted and zealously prosecuted by the most enlightened philanthropists of all countries.

The axiom, that the object of all good government is the freedom, order, and happiness of the governed, is now considered so self-evident and undeniable, that we may hardly be able sufficiently to appreciate the great merit of William Penn, in proclaiming the sound and comprehensive doctrines contained in his charter, bill of rights, and great law, at a period when the most profound statesmen held and promulgated far different ideas of the true and proper constitution of government.

In contemplating the character of Penn and his noble views and plans of melioration, we perceive for the first time an attempt to found a government upon the basis of practical Christianity, desiring no other end than the welfare of those who might live under its happy influence: we find a man the personal friend and acquaintance of a despotic prince, and under a charter obtained from him, founding a government recognizing the equal rights of all its citizens, educated in times of religious intolerance and persecution, and himself a severe sufferer for

conscience sake, when invested with power, granting to such as differed from him in sentiment, nay, even to his oppressors, perfect freedom of religious opinion and practice.

We find him who was educated in a country where a sanguinary code of laws made the awful doom of death the indiscriminate punishment for the petty thief and the deliberate murderer, and at a time too when such a change was certain to be pronounced a visionary innovation, advocating and adopting that system of graduated and mitigated punishments which has since received the sanction of the wisest and best of his successors.

Sound judgment, comprehensive and enlarged policy, unbroken faith, and unsullied probity, formed in her early days the prominent characteristics of Pennsylvanian government; and, much as they may have been aberrated from, by many of her succeeding rulers, the influence of this early example has been powerfully operative upon her character and actions from that day to the present.

It is, however, beside our object at this time to expatiate upon the conduct of Penn and his coadjutors, in the prosecution of the ennobling designs to which we have alluded; our view is simply to show that from a government and people recognizing such principles and doctrines, and, in the midst of darkness and ignorance, displaying such vivifying light and knowledge, we might rightfully expect to see a cordial and active support of all measures calculated to relieve the miseries of mankind.

Under this view of the character of the founders of our state, we might with safety anticipate that humane sympathy, that powerful and impressive precept, and that prompt and active exertion in relation to the oppressed sons of Africa, which it is the object of the present sketch briefly to delineate; and we propose now to consider the exertions of Pennsylvanians previously to the year 1770, and to make her subsequent history, from that time to the present, the subject of another memoir.

It is not necessary in this State to urge arguments to show the total hostility of slavery to Christianity, reason, and the unalienable rights of mankind; but it behoves every Pennsylvanian to speak forth his honest abhorrence boldly, and his manly indignation loudly, into those ears which are professedly open, but it is feared virtually and practically shut, to the appeals for liberty, right and justice, of a large portion of the inhabitants of a country whose constitution is founded upon the principle that liberty and the pursuit of happiness are unalienable rights which we receive from God, and of which no earthly power can ever rightfully dispossess us: and we trust it will be shown that, as Pennsylvania early stood forth as an advocate of this deeply injured class of humanity, so will she now, from the known opinions of her citizens, from her local situation, and from her moral influence in our confederacy, be compelled to take a decided and prominent attitude, and to proclaim and support the sacred rights of man, regardless of the ridicule of the unprinci-

pled, or the mercenary calculations of those with whom human flesh and sinews, and tobacco, cotton, and sugar, are equally legitimate objects of traffic. How can *we*, as citizens of the United States, remain silent, unconcerned spectators of an American slave-trade within our borders, in our capital city, the boasted centre of free government—a traffic, the wretched objects of which are bred for sale as regularly as horses and cattle, and whose treatment whilst on their way to market and when in the field of labour is scarcely upon a par with our beasts of burden. This is no highly wrought picture of gone-by days, but the hourly experience and practice of the present time.

Upon a comprehensive view of the subject, we think it may be asserted boldly, and without fear of contradiction, that the worst slavery, the most total prostration of the rights of man, and the most entire degradation of the image of God, are exhibited in the bondage of the negroes. This is the slavery which is not only practised and tolerated, on the plea that it is an entailed and unavoidable evil, but is absolutely defended in the house of representatives of the freemen of the United States, as being consistent with holy scripture and with the mild religion of our Redeemer. Negro slavery has been compared to the bondage of the Hebrews and Romans; but there is no parallel, scarcely a remote analogy between them. The slavery of the Hebrews was as the submission of sons to their fathers; the slaves formed part of one common household, of which

the patriarch was the kind paternal head; they laboured in common with his own offspring, they tended his flocks with his own sons and daughters, they were protected by special ordinances of the Jewish law, and at the expiration of fifty years, there was a manumission of all slaves, and every one was entitled to land and money from their masters: and in addition to this, there was that most important of all differences, viz. that Hebrew slavery was not hereditary. Even this mild kind of bondage extended no further than to those who were actually purchased by the master; their offspring were free, and instead of the heart-sickening certainty of the American slave, that the oppression under which he suffers will be perpetuated, perhaps in an aggravated form, to his latest posterity, the Jewish bondsman saw in prospective for *his* offspring, liberty, and perhaps honour and happiness. Among the Romans, if a slave exhibited talents, and became distinguished for his mental powers, he generally obtained his freedom; and many of the most illustrious poets, statesmen, and warriors of Rome were freedmen. To compare then the kind and paternal government of the Hebrew slave, his certain prospect of obtaining an honourable freedom, or the hope of the Roman servant, who felt within his breast the energies and ambition of a powerful mind, to that dull, heartless, and oppressive reality, which sits like an incubus upon the breast of an American slave, that never to him shall the light of freedom dawn, or the present abjectness of his condition be

changed for his rightful station among the inhabitants of the earth; to compare the two prospects together, is to contrast the occasional overcast of bright day with the impenetrable gloom of starless midnight, or to equal the whispers of hope to the sullen silence of despair. To hear such arguments as these proceeding from the source whence they have emanated, is a bad omen; it looks like a deliberate design not to meliorate, and finally, by degrees to abolish the evil, but rather, in the face of former professions, to perpetuate forever this open and palpable infringement of the very unction and spirit of our free institutions. We affect great sympathy for enslaved Spain, we profess much commiseration for degraded Italy; nay, we even reprobate the holy alliance for not undertaking a crusade in favour of the quondam land of science and of song, and are almost ready ourselves to assist in driving the barbarians from her soil: but what avails this profession? Do not all our vaunts of republicanism and free government amount to sheer mockery and insult to the name of religion, justice, and liberty, so long as a large number of the states of our confederacy continue the American slavery and slave-trade.

We are well aware that this is a subject of a momentous nature, fraught with difficulty and embarrassment, and eminently deserving calm, dispassionate and mature consideration; and we would be very far from recommending, nay even desiring the immediate abolition of slavery—in proportion to the

magnitude of the evil will be the tardiness and difficulty of its eradication—but we do insist that no excuse whatever can be made *for the breeding system, for the American slave-trade, and for the extension of slavery to new and uncontaminated soils, for the total deprivation of the negroes by law of literary, moral, and religious instruction, and that the state governments are bound to take some prospective measures, however slow in effect, and remote in final execution, to clear our land from so foul a stain on the national character.*

We frequently hear from those engaged in slavery strong expressions of abhorrence of the practice, and great desires for the abolition of the evil. It is believed that in many instances these professions are true and sincere, and we rejoice in the existence of such feelings; but we think we may be allowed to question their general verity, when we see, even in those states where there is least excuse for the permanent continuance of the evil, an anxious desire to defile with slavery new portions of our territories, and a steady adherence to their former cruel and degrading policy, without one solitary prospective glance at melioration, or one act which has the most remote bearing upon its abolition, but rather an increasing disposition to quench inquiry and discussion upon the subject. We shall not, however, at present say more on these points, but proceed to our narrative.

In order to give a clear idea of the relative period at which slavery was first opposed in Pennsylvania,

it may perhaps be proper to take a cursory review of the origin of the African slave-trade, and of the opposition it encountered up to the year 1688.

The infamy of being the first who brought the miserable sons of Africa as slaves from their native soil attaches itself to the Portuguese, who, as early as 1481, built a castle on the Gold coast, and from thence ravaged the country, and carried off the inhabitants to Portugal, where they were sold into bondage. In 1503, slaves were first taken from the Portuguese settlements in Africa to the Spanish possessions in America; and from that time to 1511, large numbers were exported to the colonies of Spain by permission of king Ferdinand V. After his death, the proposal was made to the Regent of Spain, Cardinal Ximenes, by Las Casas, Bishop of Chiapa, to establish a regular commerce in African slaves, under the plausible and well-intentioned, but fallacious pretext of substituting their labour in the colonies for that of the native Indians, who were rapidly becoming exterminated by the severity of their labour and the cruel treatment of their Spanish masters. To the immortal honour of Cardinal Ximenes, he rejected the proposition on the ground of the iniquity of slavery itself in the abstract, and also the great injustice of making slaves of one nation for the liberation of another. The Cardinal appears, therefore, to have been the first avowed opponent of this traffic in men.

After the death of this prelate, the emperor, Charles V. in 1517, encouraged the slave-trade and

granted letters patent for carrying it on; but he lived to see his error and most nobly renounced it, for he ordered and had executed a complete manumission of all African slaves in his American dominions. About this time Pope Leo X. gave to the world this noble declaration, "That not only the christian religion, but nature herself cried out against a state of slavery." In the year 1562, in the reign of Elizabeth, the English first stained their hands with the negro traffic: captain, afterwards sir J. Hawkins, made a descent on the African coast and carried away a number of the natives, whom he sold to the Spaniards in Hispaniola; and, although censured by the queen, it appears that he still continued to prosecute the trade. The French commenced this business about the same time, although Lewis XIII. gave the royal sanction with reluctance, and only when soothed by the delusive pretext of converting the Africans to christianity. In 1645 a law was passed by the general assembly of Massachusetts, prohibiting the buying and selling of slaves, except those taken in lawful war or reduced to servitude for their crimes by a judicial sentence; and these were to have the same privileges as were allowed to Hebrew slaves by the law of Moses. In 1713 the legislature of Massachusetts imposed a heavy duty on every negro imported into the state.

The next in order amongst those worthy and enlightened men who were the very early opponents of slavery, is the founder of the society of friends,

George Fox. This pious christian visited Barbadoes in 1671, and whilst there advised such of his brethren as held slaves to teach them the principles of religion, treat them mildly, and after certain years of labour set them free.

Contemporary with George Fox was William Edmundson, who was a worthy minister of this society, and who also was a fellow traveller with Fox in Barbadoes. Being brought before the governor on the charge of teaching the negroes christianity, and thereby causing them to rebel and destroy their owners, he made an answer which we quote entire; as it strongly shows that the same kind of clamour against giving negroes instruction which at present exists upon the same plea, that it would be inconsistent with the safety of their masters, has existed from the very beginning; and the answer which this worthy man gave to the slaveholders of that day is admirably adapted to those of the present time. In reply to the charge recited above he says "that it was a good thing to bring them to the knowledge of God and Christ Jesus, and to believe in him who died for them and all men, and that this would keep them from rebelling and cutting any person's throat; but if they did rebel and cut their throats, as the governor insinuated they would, it would be their own doing in keeping them in ignorance and under oppression, in giving them liberty to be common with women like brutes, and on the other hand in starving them for want of meat and clothes convenient; thus giving them liber-

ty in that which God restrained, and restraining them in meat and clothing."

In 1673, Richard Baxter, and in 1680, Morgan Godwyn, both clergymen, wrote forcibly against slavery.

From 1680 to 1688, it does not appear that any public opposition to slavery was made; and as the last mentioned year was an important era in the history of Pennsylvania, as connected with this subject, we shall now proceed to embody the comparatively scanty and imperfect materials which we have been able to collect. Soon after the first settlement of Pennsylvania a few slaves were introduced from the West Indies; and the practice was in some degree tolerated by Friends as well as the other early settlers of the province, on the pretence of a scarcity of labourers. The number imported, or the precise manner in which they were introduced, we have not been able to learn; the evil, however, soon became so obvious and increasing, as to excite the attention of the Society of Friends; and we may here remark that in the succeeding pages we shall often have occasion to notice the labours of this body of christians. To the influence of their precept and example, to their moral weight in the community, and the untiring zeal and activity with which they prosecuted this work of benevolence, are mainly to be attributed the abolition of slavery in Pennsylvania.

About the year 1682, a number of persons of this society emigrated from Krieshiem, in Germany, and

settled themselves in Pennsylvania; and to this body of humble, unpretending, and almost unnoticed philanthropists belongs the honour of having been the *first association* who ever remonstrated against negro slavery. In the year 1688 they presented a paper to the yearly meeting of Philadelphia, then held at Burlington, as appears by a minute of that meeting, protesting against the buying, selling, and holding men in slavery, as inconsistent with the christian religion.* The yearly meeting then determined that, as the subject had reference to the members of the society at large, before resolving definitively on any measure, time should be allowed for its mature consideration.

We have used many endeavours to obtain a copy of this highly interesting document; but are sorry to believe that neither the original nor a copy is in existence. We cannot, however, pass from this paper without paying a small tribute of admiration and gratitude to these early and dignified friends of human freedom and happiness.

With the information now so generally diffused in regard to the total hostility of slavery to religion and the rights of man, we cannot perhaps fully appreciate the enlightened views and clear discern-

* "A paper being here presented by some German Friends concerning the lawfulness and unlawfulness of buying and keeping negroes; it was adjudged not to be so proper for this meeting to give a positive judgment in the case, it having so general a relation to many other parts, and therefore at present they forbear it."—*Extract from the minutes.*

ment, which enabled these humble individuals to proclaim doctrines and principles so much in advance of the received opinions of the age; for at that time, as has been before remarked, negro slavery was a far less appalling and extended evil than at present. Even by many philanthropists it was esteemed rather a blessing than a curse, and was encouraged on the plausible pretence of meliorating the condition of the Africans themselves, by imbuing them with christianity, and dispelling their mental darkness and gloom; and by the comparative mildness of their treatment, some countenance was given to these delusive opinions. In the midst, then, of mitigating circumstances, did these worthy men, taking the abstract principles of right and wrong for their guide, and possessing a manly sense of the rights of their fellow creatures, proclaim to the world that, while they emigrated to enjoy their own liberty, they were willing to extend its blessings universally.

In 1696, several papers from the subordinate meetings having been read, the yearly meeting, after deliberation, issued this advice, "that Friends be careful not to encourage the bringing in of any more negroes, and that such as have negroes be careful of them, bring them to meeting, and have meetings with them in their families, and restrain them from loose and lewd living, as much as in them lies, and from rambling abroad on first days." In this year also, George Keith and his friends, who had seceded from the Quakers, published a paper on this subject,

containing some very sound and cogent arguments. They asserted that the negroes were men, the common objects, with the rest of mankind, of redeeming love; that they had been taken by violence from their native land, and were unjustly detained in bondage; and, finally, that the whole institution of slavery was contrary to the religion of Christ, the rights of man, and sound reason and policy.

The next efforts in favour of the negroes were made by the founder of our state. A mind so liberal, expansive and benevolent as his could not be indifferent to a subject of this highly interesting character; and, from the first introduction of slaves into Pennsylvania, he appears to have been desirous of improving their condition. Accordingly, in 1700, he introduced the subject to the monthly meeting of Philadelphia, and the following minute was made by that body, viz. :—

“Our dear friend and governor having laid before this meeting a concern that hath lain upon his mind for some time, concerning the negroes and Indians, that Friends ought to be very careful in discharging a good conscience towards them in all respects, but more especially for the good of their souls, and that they might, as frequent as may be, come to meetings on First Days, upon consideration whereof this meeting concludes to appoint a meeting for the negroes, to be kept once a month, &c. and that their masters give notice thereof in their own families, and be present with them at the said meetings as frequent as may be.”

These resolutions having been adopted without difficulty by his own immediate friends, he proceeded in his work of benevolence, and endeavoured to secure a proper treatment of slaves among all descriptions of persons by a legislative act. As a preliminary to further measures he was anxious to improve their moral condition, and by degrees to fit them for liberty and happiness; and accordingly introduced into the assembly a bill "for regulating negroes in their morals and marriages," and also a bill "for the regulation of their trials and punishments." To the great astonishment and chagrin of the worthy governor, the first of these bills was negatived, and his humane intentions for the present defeated.

This unexpected result is attributed by Clarkson, in his *Life of Penn*, to various reasons, viz. the hostility which then prevailed in the assembly to all projects emanating from the executive—the jealousies which existed between the province and territories—the influx of emigrants of a lower tone of moral feeling than the first settlers of the colony, and the diminution of Quaker influence in the assembly; the executive council, composed wholly of members of this society, having concurred with Penn in proposing the bill.

The same causes appear to have been in operation for several years after; and we accordingly find a degree of severity and rigour in the legislative enactments of 1705, entirely at variance with the humane policy of Penn and with the benevolent laws of a very few years later date.

The law of 1705 was entitled "An act for the trial and punishment of negroes." The act provided that negroes convicted of heinous crimes, such as murder, manslaughter, burglary, rape, &c. should be tried by three justices of the peace and six freeholders of the vicinage; that the punishment of death should be awarded to such offences; that any negro convicted of carrying arms without his master's consent, should, on conviction before a magistrate, receive twenty-one lashes; and finally, that not more than four negroes should meet together without their master's permission, on the penalty of receiving any number not exceeding thirty-nine lashes, on conviction before one justice of the peace. This law was intended as a substitute for William Penn's act of 1700, for the "trial and punishment of negroes." In this same year a law was passed to prevent the importation of Indian slaves, under penalty of forfeiture to the governor; and also a bill laying a duty on all negroes imported into the province. In 1710 a law of similar character was enacted.

In 1711, the Yearly Meeting of Philadelphia, on a representation from the Quarterly Meeting of Chester, that the buying and encouraging the importation of negroes was still practised by some members of the society, again repeated and enforced the observance of the advice issued in 1696, and further directed all merchants and factors to write to their correspondents and discourage their sending any more negroes.

This year also is memorable in the annals of

Pennsylvania, on account of the passage of a bill, entitled, "An act to prevent the *importation of negroes and Indians into the province.*"

We have not been able to obtain a sight of this highly important and interesting document. It is doubtful indeed whether a copy of it is in existence, as it was repealed in England, directly after its passage, by an order of council. The loss of such a law is the more to be regretted, as it evinces a striking alteration of temper and feeling in the legislature since the enactments of 1705, a change which can only be attributed to the exertions of the friends of freedom, and the influence of more enlightened public opinion; and as a further evidence that the minds of many of the citizens of Pennsylvania were alive to this interesting subject, and anxious to prevent the further growth and increase of what they began already to experience as a serious evil, we find, in 1712, that, undismayed by the repeal of the non-importation law of the preceding year by the court of England, a petition, "signed by many hands," praying for a duty to discourage the further importation of negroes, was presented to the assembly, and after mature consideration, a bill laying the then enormous duty of 20*l.* per head was passed, which well-intentioned and effective law shared the same fate in the English council as the act of 1711. We may here take occasion to observe, that all the designs of the early legislators of Pennsylvania to improve the condition of her citizens, and to substitute, for the oppressive policy of the old world, a more free, hu-

mane, and happy condition of things in the new, were rendered void, through the repeal, by English orders of council, of all such laws as had these noble and excellent designs in view. This circumstance will account for the little subsequent notice taken of the subject by the legislature of our state, with the exception of a few laws, which we shall soon mention, from this period up to 1770. Our intervening history will be principally confined to the exertions of the Society of Friends and of private individuals.

In 1712 a petition was presented to the assembly by William Southeby, praying for the total abolition of slavery in Pennsylvania; on consideration, the house decided that the prayer of the petitioner could not be granted. In the years 1715-17-21-26 and 29, different laws were passed, laying duties on negroes; these, with a bill of 1725-6, entitled an act for the better regulating of negroes in the province, are all the notices of the subject that we have been enabled to find on the votes of the assembly up to 1761. The hostility of the English government to any supposed encroachment on the trade of the country, even in human flesh, appears to have been sufficient to prevent any further attempts to abolish this cruel traffic. Though the law of 1725-6, for the better regulating the negroes, contained some harsh provisions, it provided that the existing duty on negroes should be increased to 10*l.* per head; the third section obliged a master, on manumitting his slave, to give security that he should not become chargeable to the county: the fifth section enacted

that no minister or magistrate should marry a negro with a white person under penalty of 100*l.* and that no negro be more than ten miles from home without written permission from his master.

In 1761, we find the last effort made to check the importation of slaves previous to 1770. In this year remonstrances were presented to the assembly from a large number of the inhabitants of Philadelphia, representing the mischievous effects of the slave-trade, and praying for such an increase of the duty on negroes as might effectually check further importation. After much debate in the house, and altercation with the governor, a bill increasing the impost was passed. In 1768, this bill, having expired by its limitation, was re-enacted. Thus much for the acts of assembly.

To return to an earlier period. In the year 1712, the Yearly Meeting of Philadelphia addressed an epistle to the Yearly Meeting of Friends in London, stating that for a number of years they had been seriously concerned on account of the importation and trade in slaves, and of the detention of them and their posterity "in bondage without any limitation or time of redemption from that condition;" that the meeting, by its advice, had endeavoured, and in some degree succeeded in discouraging the traffic; yet, that as "settlements increased so other traders flocked in among them over whom they had no gospel authority," and that the number of negroes was thereby greatly increased in the province; they desired that the London Yearly Meeting would

consult with Friends in the other colonies who were more engaged in slave-holding than those in Pennsylvania, that in this matter of so general importance, a union of opinions and practice might be obtained; and further desiring the advice and counsel of English Friends in the case. These requests were acceded to, as appears by the epistle from Pennsylvania to London, in 1714; which states, that they kindly received the advice of English Friends upon the subject, and were one in opinion with them, "that the multiplying of negroes might be of dangerous consequence," and that, therefore, a law was obtained in Pennsylvania, imposing a duty of 20*l.* a head upon all imported, but that the queen had been pleased to disannul it; that they heartily wished that some means could be discovered of stopping the further importation, and desired the influence of the society in England with the government there, to endeavour to prevail on the queen to sanction such further anti-slavery laws as the legislature of Pennsylvania might adopt. They further stated that they did not know of any Friend who was concerned in importing negroes from Africa, and concluded by desiring the Yearly Meeting of London to continue its advice and assistance to Friends in the other slave-holding colonies. In 1715 and 16 and 19, advice was issued by the Yearly Meeting of Pennsylvania, strongly urging that Friends should not only decline importing, but also purchasing, when imported, any slaves; and that those who had them in possession, should treat

them with "humanity and a christian spirit," and endeavour to instruct them in morality and the principles of religion.

The next labourer in behalf of the negroes whom we shall have occasion to notice, is Ralph Sandiford, he was descended from a respectable family in Barbadoes, and was educated as a member of the episcopal church by a pious tutor, probably in Great Britain. On emigrating to Pennsylvania he joined the Society of Friends, and soon began to direct his attention towards the condition of the black population. He rejected many advantageous propositions of pecuniary advancement, as they came from those who had acquired their property by the oppression of their slaves, and appears to have been very earnest and constant in his endeavours to prevail both on the members of his own religious society, as well as his friends generally, entirely to relinquish the practice of slave-holding. In 1729 he appeared as a public advocate of the blacks, by publishing a work, entitled "The Mystery of Iniquity, in a Brief Examination of the Practice of the Times," which he circulated at his own expense wherever he deemed it might be useful. We have never read the essay, but the author is represented to be a man of talents and unquestioned probity, and the work as every way worthy of him. In the words of Clarkson, "it was excellent as a composition. The language was correct. The style manly and energetic, and it abounded with facts, sentiments, and quotations, which, while they showed the virtue and ta-

lents of the author, rendered it a valuable appeal in behalf of the African cause." For some expressions in reference to his brethren, which he supposed would be considered severe, he apologizes, by saying that they were wrung from him by his intense feeling of the magnitude of the oppression, with which he was sometimes so impressed that "he felt as if the rod had been upon his own back."*

In 1730-35-36 and 37, the Yearly Meeting of Philadelphia was informed by some of its subordinate branches that though the *importation* of negroes had been abandoned by members of the Society, yet that some still persisted in buying them when imported: the meeting therefore in these respective years issued advice enforcing the minutes made upon the subject on former occasions, and strongly recommending to the Monthly Meetings, (who are the executive departments of the society,) to be diligent in cautioning and admonishing such of their members as might give cause of offence. In 1737, the Quarterly Meetings were directed to furnish in their reports at the next Annual Meeting a succinct statement of the actual practice of their members in this respect. In 1738, in answer to this requisition, and also in the years 1739 to 1743, it appeared that the members who continued to purchase slaves were constantly decreasing.

We shall next notice that early, honest, but

* See the interesting memoirs of Sandiford and Lay, by Roberts Vaux.

over-zealous opponent of the bondage of men, Benjamin Lay. He was an Englishman by birth, brought up as a seaman, and after pursuing that occupation for several years, settled in Barbadoes; but the wretchedness and misery which he there witnessed, and the heart-rending scenes of cruelty and oppression, of which he was a daily observer, so affected his sensitive mind as to induce him, a few years afterwards, to quit the Island and emigrate to Pennsylvania. Here he likewise found the evil he so much shunned and abhorred, but in a far different and much mitigated form. He regarded slavery, however much disguised and qualified, still as a "bitter draught," and reprobated the practice with the same zeal and licence of language which he had used in attacking West India bondage; and from his eccentricity of manner and too great warmth of expression, he is thought to have been less useful and influential than he otherwise might have become: yet he was a man of a strong and active mind, of great integrity and uprightness of heart, and one who no doubt acted from what he conceived to be the dictates of his conscience; hence we can most justly forgive his intemperate words and actions, and regard him as an early, honest, and active friend of oppressed humanity.

In 1737, he published his treatise "on slave-keeping," a work evincing talents and considerable force of expression; though liable to the objections to which we have above adverted. This essay he distributed gratuitously, and was particularly

anxious to have it introduced into schools, in order to awaken the sympathies of those who were about entering into active life.

He also solicited and obtained interviews upon the subject of slavery with the governors of several of the states; and, in short, to the time of his death, which occurred in 1760, in his 80th year, he was constant and untiring in his labours.

In 1754, the yearly meeting of Pennsylvania printed and circulated a letter of advice to its members, reminding them of its often expressed and well known will upon the subject of buying slaves, and urging some cogent arguments to show the anti-christian nature of the traffic, and the awful responsibility that those masters were under who neglected to guard the morals of their slaves, and to imbue their minds with religion and virtue. It may be found at length in Clarkson's History of the Slave-trade.

In 1755, finding that, in opposition to the reiterated advice of the body, some of its members continued to persist in buying negroes, the yearly meeting made a rule of discipline directing that such persons as adhered to the practice after suitable admonition by their monthly meetings, should be disowned from the religious communion of the society.

Having thus prevented the further increase of slaves by purchase, the society was desirous of advancing still further towards a complete eradication of slavery from amongst its members. Accordingly, in 1758, it was unanimously agreed that Friends

should be advised to manumit their slaves, and show their sense of gratitude to the Divine Being, from whom they received the liberty which they so freely enjoyed, by extending this blessing to all their fellow-creatures; and John Woolman and others were appointed a committee to visit such Friends as held slaves, and endeavour to prevail on them to relinquish the practice. This committee, it appears from the minutes of the yearly meeting, continued to prosecute their work of benevolence during the years 1758-59-60 and 61—and from their reports, these Christian endeavours were crowned with much success, many being induced to cleanse their hands from the stain of slave-keeping. The yearly meeting constantly continued its attention to this subject to the year 1776, when it was enacted that all Friends who refused to manumit their slaves should be disowned by the society. A more particular account of this noble act we reserve for our succeeding essay on this subject.

We are next called upon to notice one of the most pious and indefatigable labourers in the cause of freedom and human happiness whom the Society of Friends ever produced, viz. John Woolman. This excellent man was born in the state of New Jersey, in the year 1720, and at a very early age was distinguished for his attachment to religion; which so increased and strengthened in after-life, that we think it may be safely asserted that, for self-denial, purity of manners and conversation, firm, consistent and persevering prosecution of duty, and zealous

and enlightened benevolence, he has rarely been equalled, and perhaps never excelled.

He appears very early in life to have had his mind engaged in reflection upon the subject of slavery. Soon after he had attained the age of twenty-one years, being hired as an accountant, he was directed by his employer to write a bill of sale for a negro, which, in obedience to his instructions, he did, though as he himself says, not without great uneasiness of mind, and that he afterwards found it to be his duty to inform his master and the purchaser of the slave that "he believed slave-keeping to be a practice inconsistent with the Christian religion;" and on a subsequent application by another individual to prepare an instrument of writing of a similar kind, he entirely refused, alleging the foregoing conviction as his excuse.

In 1746, he travelled as a minister of the Society of Friends, through the provinces of Maryland, Virginia, and North Carolina, where it appears that his mind was again engaged and his feelings excited, and that he took occasion during the journey to communicate his convictions on this deeply interesting subject to many of the inhabitants. He says, he "saw in these southern provinces so many vices and corruptions increased by this trade and this way of life, [viz. the whites living idly and luxuriously on the labour of the blacks,] that it appeared to him as a gloom over the land."

In 1753, he published the first part of his "Con-

siderations on Keeping Negroes ;" in which he insists on the rights of the negroes as children of the same Heavenly Parent with their masters, and that slavery is repugnant to the Christian religion.

In 1756, he made a religious visit to Long Island, and was much engaged with members of his own society to prevail on them to release their slaves. Hitherto he had only acted as circumstances casually came in his way, but now he appeared in the character which he continued until his death to support, of an active and untiring labourer in this righteous cause.

In the year 1757, in company with his brother, he engaged in an arduous journey through the southern colonies, in order to convince persons, principally of his own society, of the wickedness and impolicy of slavery. He sought opportunities of friendly conference with individuals, and urged his arguments with calmness and modesty, and, at the same time, with dignity and firmness ; and also in the meetings for discipline of his own society, he was indefatigable in pressing the subject, and had the satisfaction of finding that by some he was kindly received, and of perceiving a disposition in others to adopt his views.

We have before noticed that he was appointed by the yearly meeting of Philadelphia, in 1758, one of a committee of that body for discouraging slaveholding amongst its members ; and as he had been very instrumental in producing this appointment, so he was also indefatigable in discharging the duties it

required ; and, in this year and the subsequent one, he made several journies into various parts of Pennsylvania for the promotion of this object. In the year 1760, he travelled into Rhode Island on a similar errand, and also visited the island of Nantucket. In 1761, he visited some families in Pennsylvania and New Jersey. In 1762, he published a second part of his "Considerations on Slave-keeping."

This essay is written with considerable ability and force of expression, and is well worthy of perusal at the present day. He urges the rights of the slaves to their freedom in common with the rest of mankind ; shows the debasing and demoralizing effect which the institution of slavery in any country produces on both masters and servants, and the fallacy of comparing negro slavery to the condition of the Jewish bondsmen ; and concludes by reciting some testimony to illustrate the abominable character of the African slave-trade.

In 1767, this apostle of freedom travelled again in Maryland, and again urged his enlightened opinions. In 1772, he embarked for England, and whilst there, endeavoured to induce the society of which he was a member, to interfere with the government of England on behalf of the oppressed Africans.

The time, however, had arrived, when this faithful labourer was to be released from his arduous service, and to receive in the mansions of eternal rest the reward of his works. He died in the city

of York, England, of the small-pox, in 1772, aged about 52 years.

Contemporary with Woolman was that pious and excellent friend of the human race, Anthony Benezet; a man who combined, in an eminent degree, shining virtues, excellent talents, and indefatigable industry; who lived and laboured with the most well directed assiduity for the good of all mankind, and who died regretted by those, and they were not few in number, who had seen, and known, and admired his long career of useful practical benevolence.

He was born in France, of respectable parents of the Protestant profession, in the year 1713, who, at the revocation of the edict of Nantz, removed with their infant son into Holland, and shortly after into England. Anthony here received a liberal education, and served an apprenticeship in an eminent mercantile house in London. Having joined himself in membership with the Society of Friends, in 1731 he emigrated to Philadelphia, which was from that time the permanent place of his residence. In 1736 he married, and turned his attention to establishing himself in business. With respect to this subject his mind appears to have been much unsettled; not as is generally the case, anxious to resolve on the profession which might yield the greatest pecuniary emolument, but much more concerned how he might devote his time and talents to the service of his Creator and the advancement of the happiness of his fellow-creatures. At the age of twenty-

six, he believed it to be his duty to assume the arduous engagement of an instructor of youth. After teaching a short time in the Academy at Germantown, in 1742 he accepted of the office of English tutor in the "Friends' Public Schools in Philadelphia," in which situation he continued for twelve years, much to the satisfaction of his employers. In 1755, he opened a school on his own account for the instruction of females, and by the excellence of his moral and literary tuition, and his peculiar fitness for this interesting duty, it long continued to be one of the best patronised and most highly useful seminaries of Philadelphia.

About the year 1750, according to the account of his highly respected biographer,* his attention appears to have been first engaged upon that important subject which afterwards engrossed so large a portion of his time and talents. His feelings having become deeply interested on account of the oppressed and degraded condition of the blacks, the first essays which he made were of that practical kind so highly characteristic of the man. Being impressed with the importance of meliorating, in the first place, their mental condition, he imposed on himself, in addition to the laborious duties of his own school, the task of giving in the evenings gratuitous instruction to the negroes of Philadelphia; and he had the great satisfaction to discover, by the improvement of his pupils in literature, as well as their moral ad-

* Roberts Vaux.

vancement, that the hitherto long asserted idea of their mental inferiority to the rest of mankind was fallacious and illusory.

Having excited in the minds of his fellow-citizens an increased interest and sympathy for this oppressed people, he proceeded to make more public the results of his reflections and experience. His first writings consisted of small pieces in the almanacs and newspapers of the day, which medium he selected as best adapted to engage all classes of people in favour of his benevolent designs. In 1762, he published "An Account of that part of Africa inhabited by the Negroes." In 1767, "A Caution and Warning to Great Britain and her colonies on the calamitous state of the enslaved Negroes." This work was examined and approved by the Society of Friends in Pennsylvania, as appears by the minutes of meetings of the representatives of that body, held in 1766, at whose expense a large number of copies were printed and sent to England for distribution. 3d, "An Historical Account of Guinea, its situation, produce, and the general disposition of its inhabitants; with an inquiry into the rise and progress of the slave-trade, its nature and calamitous effects."

This book is remarkable for having given to the venerable Thomas Clarkson some of the first definite information with regard to facts, which enabled him practically to commence his long career of activity and usefulness; and we cannot do better

than to give Clarkson's character of the work in his own words.

“This pamphlet contained a clear and distinct development of the subject from the best authorities. It contained also the sentiments of many enlightened men upon it; and it became instrumental, beyond any other book ever before published, in disseminating a proper knowledge and detestation of this trade.”

With such limited pecuniary means as the occupation of school-keeping afforded, Benezet distributed large numbers of these valuable and instructive books; he sent copies of the *Historical Account of Guinea* to some of the most eminent men in Europe, accompanied with a circular letter, written in a simple and unadorned, yet forcible and convincing manner; in addition to this, all the time he could command from his regular occupations was employed in an extensive correspondence with such persons as he thought might be interested in promoting the cause to which he was so unceasingly devoted. Amongst those whom he addressed at different times, were the Archbishop of Canterbury, Dr. Fothergill, Granville Sharp, the Abbe Raynal, John Wesley, George Whitfield, the Countess of Huntingdon and Charlotte Queen of England. He also made an appeal in behalf of the negroes to the queens of France and Portugal.

We cannot, perhaps, better illustrate his diligence and the extent and variety of his engagements. than

by quoting the words of his intelligent biographer. He remarks :

“ It was characteristic if one day he were seen surrounded by the sable children of Africa, imparting advice and deriving information from them, concerning the cruelties they had suffered, and the next engaged in composing essays on the subject; addressing letters to friends and strangers, from whom he hoped some aid could be obtained; or, with an innocent boldness worthy of his office, spreading the cause of the poor negro, in the language of warning and persuasion, before statesmen and sovereigns.”

These great, and in a degree, effective exertions, were sedulously continued during the whole course of his long life; the two last years of which were devoted to the tuition of negroes, in a free school founded and endowed by the Society of Friends.

On a review of the extent and variety of his efforts, the personal exertions which he used, the constancy as well as zeal with which he pursued the investigation and exposure of every branch of the subject, we think entitle us to adopt the short but full eulogium which Clarkson pronounces respecting him. “ Anthony Benezet,” says he, “ may be considered as one of the most zealous, vigilant, and active advocates which the cause of the oppressed Africans ever had. He seemed to have been born and to have lived for the promotion of it; and, therefore, he never omitted any the least opportunity of serving it.”

His active mind also embraced many other objects of benevolence. He was deeply impressed with the anti-christian tendency of war, and its hostility to the happiness of mankind, and wrote several able tracts on the subject; and also corresponded thereupon with many distinguished characters. His private charities were numerous and unostentatious. In short, it appears to have been the primary concern of his life to imitate, according to his ability, the example of our Holy Redeemer, in constant acts of benevolence and good will to mankind.

With all these good works there was connected one remarkable trait of his character which beautified and adorned all his other excellencies, and that was his great humility. Shortly before his death he uttered these expressions: "I am dying, and feel ashamed to meet the face of my Maker, I have done so little in his cause." He also desired an intimate friend to prevent, if possible, any posthumous memorial of him; and added, "if they will not obey this wish, desire them to say, 'Anthony Benezet was a poor creature, and through divine favour was enabled to know it.'"

This distinguished philanthropist died in 1784, in the 71st year of his age, after bequeathing the little fortune he had accumulated by industry and economy to the overseers of Friends' Public Schools, that it might be appropriated to the education of the blacks.

We have now closed our notice of the efforts of Pennsylvania in behalf of the negroes, antecedent

to the year 1770; and have shown, we trust, that our forefathers were active and ardent labourers in the righteous cause of human freedom and happiness. We propose, in a future essay, to exhibit the further history of our state, as connected with this subject, up to the present time.

NOTICES

OF

THE LIFE AND CHARACTER

OF

ROBERT PROUD,

Author of "The History of Pennsylvania."

BY

CHARLES WEST THOMSON.

Read before the Council, August 16, 1826.

NOTICES, &c.

THERE are few subjects connected with the history of our country, on which so much remissness has been observed, as in collecting and arranging authentic narratives of the lives of those venerable men who have gone before us, filling with the most effective zeal and industry the station of literary and political pioneers; and, in a greater or less degree, giving "to the body of their age its form and pressure." The details of many of these narratives remain only in the recollection of those few of their cotemporaries whom age has spared; and the unceasing tide of time, as it sweeps over these even now faint traditions, is daily effacing the impression, until at last, unless transferred to a record of greater perpetuity, it shall become utterly illegible. It is, indeed, much to be regretted, that many interesting facts and incidents relating to the outset of our political career, are thus becoming lost to the world, for want of some suitable hand to give them a form of durability. Sincerely is it to be wished that some of those, who have now quit the stage of action, had employed a portion of their leisure in committing to paper those interesting and important matters, which they had seen and known, and which

have now gone down with them to the grave; and still more is it now to be desired, that the small remnant that remains, will not suffer a similar oblivion to cover the knowledge which they possess.

Impressed with these views, I have been at some pains to collect materials for the following sketch, which though slender and in many respects unsatisfactory, will not, I trust, prove wholly uninteresting. Engaged in an arduous and time-engrossing occupation, I have been obliged to throw them together as intervals of leisure might offer, which I fear will make their arrangement appear exceedingly desultory. Such as they are, however, I offer them to the service of the society, trusting to superior abilities for their improvement and correction.

Most of those great and admirable men who belonged to the patriarchal age of our country are now no more, and too many of them have gone to their rest "unhonoured and unsung." Unambitious of fame or future renown, it is true of many of them, that they passed much of their lives in retirement and seclusion. In the native simplicity of their characters, they pursued the quiet path of unassuming duty; and while they walked humbly before God, and dealt justly with their fellow men, they asked not the idle breath of praise to give them a celebrity, which they knew at best could be but vain and evanescent. Among this unassuming class, perhaps one of the most obscure and retiring was Robert Proud, the only citizen of Pennsylvania who has ever honoured her with a History, or attempted to

give her a name among the nations. To the contemplation of some prominent incidents of his retired life, we propose devoting a few pages.

He was born, according to a memorandum of his early life which he has left, on the 10th day of May, 1728. His parents, William and Ann Proud, were at that time residing in Yorkshire, England, at a farm-house called Low Foxton, which was so named to distinguish it from the adjoining farm of High Foxton, and which has long since been entirely demolished. It was situated about a mile distant from a small market-town called Yarm, on the river Tees, which forms part of the boundary line between the counties of Yorkshire and Durham. From his early years, he appears to have been studiously disposed, or as he himself expresses it, "I had a sense of what is good and excellent, and of the contrary; and have ever been, according to that sense, very desirous of the best things; and therefore early, in my young years, had a strong inclination for learning, virtue, and true wisdom, or improvement of mind and mental felicity, before, or in preference to all mere worldly or inferior considerations; which I afterwards rejected on that account, when I was courted by them, and had it in my power to have appeared in a much superior character and station in the world, than I am since known to be in."

The first step which he took in the path of learning was at the neighbouring village of Crathorn; where he went to school. to acquire the rudiments

of knowledge, to a person of the name of Baxter. This circumstance, as far as we are informed, presented, in itself, nothing remarkable; but it is interesting, as being the outset of that career, which afterwards stamped his character, and produced so powerful an influence over his fortunes.

When Robert was about five or six years of age, the family removed from Foxton to a farm 15 or 20 miles distant, near the village of Thirsk, called Wood End, which had long been the seat and residence of the Talbots. Here he continued to reside until he was nearly grown up, when, induced by his desire for improvement, he obtained permission to leave his paternal mansion, and took up his abode under the roof of one David Hall, at Skipton, in a distant part of the same county of Yorkshire. Some depression of spirits, very natural to a young mind on its first departure from home, appears to have attended him in the prospect, as well as the accomplishment, of this journey; on which he was accompanied by his cousin Robert Proud, who afterwards became a preacher in the Society of Friends, and visited America on a service of ministerial duty.

This David Hall was a member of the same society, and also a preacher in it;* and kept a boarding-school, in which he taught the Latin and Greek languages, and some other branches of learning.

* He was likewise a writer of some esteem in the society, and after his death, some of his productions were re-printed, and published in a small octavo volume, with a sketch of his life written by himself.

The subject of our present notice had no previous knowledge of him, excepting by name and character; but he was a man, it seems, of some literary reputation; and, as Proud says in his memorandum, "esteemed one of the most learned, reputable, and most worthy persons, then in that part of England." The preceptor and the pupil appear, however, to have been well pleased with each other; and a firm friendship was cemented between them, which continued unremitted until the death of Hall, till which time they maintained a correspondence in the Latin tongue.

Robert remained in the house of his esteemed tutor at Skipton about four years, with great satisfaction and improvement. It was not his original intention to devote himself particularly to the languages, but merely to advance himself in some parts of mathematics, and enjoy the improving conversation of his instructor. By his persuasion, however, he applied himself to Latin and Greek, and soon made considerable proficiency.

But another change was now to be made, still more trying than the former, to a young and inexperienced mind. To London, that "resort and mart of all the earth," was the next remove, which he effected in the year 1750, being then about 21 years of age, taking with him a recommendation from his affectionate preceptor. After some time, by the influence of his kind friend and relative, the illustrious Dr. John Fothergill, who, unlike some high professors of the present day, "was a great friend of learning, and a zealous promoter of true mental

improvement, and a lover of all useful science,²² (such is Proud's eulogy,) he obtained an agreeable temporary situation in the families of Sylvanus and Timothy Bevan.* These gentlemen had an esta-

* Sylvanus Bevan was originally from Wales, and was early in life introduced to William Penn, who afterwards became his intimate acquaintance, friend and patron. He had two wives, the first of whom was a daughter of Daniel Quare, watchmaker to king William III. and the second a daughter of Dr. Heathcott, who served the same monarch in the capacity of physician. A curious anecdote is related in reference to his marriage with the latter. The parties being all members of the Society of Friends, and the father of the bride holding so exalted a station, it was feared that too much attention and display would be excited, if the marriage were solemnized at the regular meeting for worship; accordingly, the day before was specially appointed for that purpose, in the hope that it would not be generally known. Notwithstanding this precaution, however, as mostly happens on such occasions, the secret soon transpired, and a splendid assembly was collected to witness the nuptials. The queen and princesses were present, and it was said that the king himself attended incog. There lived a few miles from town an old lady of the name of Alice Hays, a good honest woman, and moreover a preacher in the Society of Friends, who, under an idea of religious duty, went that morning to London, and attended the above-mentioned meeting. George Whitehead, well known as a preacher in the same society, attempted some observations appropriate to the occasion, endeavouring to elucidate the trite maxim, that the man is the head of the woman. When he had concluded, Alice Hays rose and remarked, that some objection might be offered to what had been said, for it was asserted in scripture that a virtuous woman is a crown to her husband, and that it was well known that the crown is above the head. The queen and princesses were so much pleased with the wit of the remark, that the next day they made her a visit.

blishment in London; but their country seat at Hackney, about two miles distant from the city, was generally the place of Robert's residence. In this retirement he first assumed the office of a preceptor, occupying a considerable part of his time in the tuition of the two young Bevans, sons of the last named gentleman. He took the opportunity, however, in his intervals of leisure, of cultivating his own improvement in literature and science, in the hope that, at some future period, it might redound to his own advantage, or at least enable him to become a useful member of society. Amid all the ardour of study which he evinced, the desire to render his attainments subservient to the good of his fellow beings seemed to be a paramount consideration; and sometimes, as has before been hinted, occasioned the neglect of his own immediate interests. He was now placed in a situation where he could indulge this propensity; and his views were still intensely directed, as though he had prophetically foreseen his coming labours in the land of his adoption, not only to his "own future advantage, but also to that of others." He pursued knowledge, at this time, for its own sake; the *amor literarum* with which he was infected was a sublime hallucination, and taught him to look on pecuniary aggrandizement as mean and contemptible, or, in his own language, "as the most despicable of worldly objects." But he had occasion to regret in after life, with a feeling of blight and disappointment which usually attends such minds, his inattention to the good things of this

world, and was obliged to acknowledge, that though "honour and fame from no condition rise," yet the circumstances in which we are placed in society do more or less intimately affect our happiness. A man of genius illy provided in this respect, must, generally speaking, either select his associates from among those who are beneath his level in intellect, or else experience much difficulty, as Proud did, in order to act in proper character, and maintain the standing his education would seem to demand. This, to a sensitive mind, would be equally trying on either side; and it will easily be conceived how deeply such an one must feel the deprivations of fortune, even though not subjected to "any immediate want or extraordinary necessity." Narrow circumstances, he also discovered, were no small impediment to entering into the married state, a situation which, in his early years, he seems to have ardently desired, as conducing materially to the felicity of the human mind. But, like Moses on Mount Pisgah, he only perceived the excellency of the promised land, but was never permitted to obtain the possession.

From the preceding remarks it will be inferred, that, during his residence in London, Robert Proud was introduced into a very different rank of society, and moved in a much higher sphere, than that to which he had before been accustomed. It was his good fortune, which he acknowledges as a favour from the Divine hand, to receive from those with whom he then associated, the most respectful notice

and attention. From the intimacy which he thus enjoyed with Dr. Fothergill and other celebrated members of the medical profession, he was induced to apply himself to the study of that science; and, having ample opportunity of obtaining the best information on subjects relating to it, he continued the pursuit for several years, with a success fully adequate to his expectations. His views of the practice of physic were noble and exalted; and the same desire to labour for the benefit of mankind, which had stimulated him to exertion in his former employments, followed him into his present occupation, and urged him to pursue it with increased assiduity.

But there is a species of professional disgust, (I know not what else to term it,) which sometimes seizes upon men of the strongest mind and most vigorous intellect, and throws, by its paralyzing influence, a pervading spell over the whole of their future life. Our admired countryman, the late Charles Brockden Brown, was an interesting instance of this singular malady. Few men, perhaps, have had a fairer opportunity of rising to enviable reputation at the bar than he; and fewer still have possessed abilities so adequate to enable them to ascend the steep of fame with ease and rapidity. To his elegant, powerful, and comprehensive mind, the law opened a field of active enterprise and tempting emolument; and for a time the race was promising. But ere the goal was fairly out of view, this *malum magni animi* laid its withering grasp upon his energies, and he retired in disgust from the

ranks of legal competition. A similar fate awaited the subject of our narrative. With the fairest prospect of success before him, he became dissatisfied with his situation. It exposed him, he remarks, "to a very glaring view of the chief causes of those diseases, (not to say vices,) which occasioned the greatest emolument to the profession of medicine;" and, upon this ground, (the solidity of which we leave to others to determine,) his aversion to it became so insuperable, that he at once abandoned the pursuit, and with it his country. For this last singular step we find it difficult to account. He gives no reason for it himself in the memorandum to which we have referred, excepting some vague idea that it was taken "on account of that satisfaction of mind which much acquaintance, popularity and fame, or the hurry of much employment, crowds and large cities seldom afford." It is not a little remarkable, that so important an action of his life should have a cause assigned for it so very unsatisfactory.*

* There is a tradition abroad respecting his emigration from England, which it may not perhaps be amiss to mention, although, as far as we can learn, there is little warrant for its authenticity. He seldom or never spoke on the subject, and has, consequently, left the matter open to conjecture. It is said that he had formed an attachment to a young lady of great beauty, to whom, if I am not mistaken, he was under engagement of marriage, which being broken off by the interference of royal gallantry, produced a disappointment, which is spoken of as the cause of his voluntary exile. This, however, it will be remembered, is merely tradition. Another individual was well known at one time as having incurred a disappointment

On the third day of January, 1759, Robert Proud landed at Lewistown, in the state of Delaware, and three days after arrived in Philadelphia. He left behind him in England three brothers and two sisters, of whom little is known. His parents, it appears, were yet living, at the time of his emigration, and, while they remained, it is said, he at one period thought of returning to his native land; but they, in the course of nature, were removed—the auspicious season passed away—and his wish was never accomplished. The first person with whom he took up his residence after his arrival, was one Isaac Greenleaf,* at whose house, however, he remained but a few months. He changed the place of his abode frequently during the first twenty years of his residence in Philadelphia and its neighbourhood. During that time, he resided, at three different intervals, with his worthy friend Anthony Benezet; and he frequently spoke, with great satisfaction, of the many pleasant hours he had spent in the company of that estimable man, and those other vener-

of the nature alluded to, and having had some acquaintance with Proud, it is supposed by the friends of the latter that the circumstance has thus been incorrectly imputed to him. There seems, nevertheless, to be some slight ground for the belief, that our historian did at one period suffer a similar discomfiture, but not with the person or in the manner generally reported.

* Merely for the sake of correctness, it may be as well to observe, that he staid previously, for a day or two, at the house of his friend, Mordecai Yarnall, who was the companion of his voyage.

able characters who were accustomed to resort to his humble dwelling.* Finally, however, in the autumn of 1779, he went to reside with Samuel Clark; in whose family he continued, without intermission, during the remainder of his life, a lapse of more than thirty years.

From the period of his arrival in America, his life assumed a monotonous aspect, very unfavourable to biographical interest. Retired in his habits, he pursued "the noiseless tenor of his way," and seldom coming before the public eye, the memory of many of his days has gone down with him to the grave. Many years previous, a public school or seminary had been established by the Society of Friends, one department of which was appropriated to instruction in the classics; and in this school, about the year 1761, Proud took his station as teacher of the Greek and Latin languages. He continued in this situation until the commencement of the revolutionary war, when he relinquished the preceptorship, and engaged in an unfortunate mercantile concern with his youngest brother, John Proud, who was then a resident in this country. Robert was an ardent royalist: he could not for a

* Proud used to compare Benezet's house to a ship's cabin, it being below the level of the ground, with descending steps to the door. This antiquated building stood in Chesnut street below Fourth, nearly opposite our present Post Office, and was removed, in the year 1818, to make room for a more modern edifice. A sketch of it has been preserved by Roberts Vaux, Esq.

moment entertain an idea unfavourable to the success of the king's cause, and made his calculations in business accordingly. The result proved adverse to his expectations and his hopes—the colonies became independent, and his commercial affairs went to ruin. His brother returned to England, and Robert, at the close of the war, again resumed his school.

The total discomfiture of the royal cause, to which his affections were so closely wedded, and the consequent failure of his own private fortunes, seemed to have soured his feelings towards the land of his adoption; and, although his ideas of prudence induced much taciturnity on the subject, yet he has occasionally expressed himself in rather unkindly terms towards this country, in some of the papers which he has left behind him. With regard, however, to his sentiments on this topic, it must be remembered, by way of extenuation, that he had left his own country under peculiar circumstances, with all those powerful attachments, not to say prejudices, which every true patriot should feel for his native land—that so long as the colonies remained under the government of the mother country, he seemed, in some measure, to retain a hold upon his birth place—that the dismemberment of the colonies broke this tie, and totally severed him from the home of his affections. The ardent spirit of the times, moreover, must be taken into consideration; the treasonable character which the contest was thought by many to present, must also be remembered; and

combining these with those fierce and unfriendly passions, which a civil war invariably awakens, we must forgive Proud, Englishman as he was by birth, and fretted as he had been by early disappointment and later misfortune, if he did prefer the land of his nativity to the land of his adoption, and in that trying, and, in its results, glorious struggle, gave his full and undivided heart and feelings to the furtherance of the Tory interests.

It is not a little singular, that, under this full tide of political excitement against the colonies, the subject of our notice should have projected, and in a few years, absolutely accomplished a History of Pennsylvania—the only history of our state which has ever been attempted,* and which is rendered more valuable on that account, than from any intrinsic merit it possesses. I do not say that it is valuable on that account only; for as a succinct collection of historical facts, it undoubtedly deserves the most respectful attention; but its style is too dry, and its diction too inelegant, ever to render it a classical work, or to enable it to stand before a more graceful competitor. It is exactly that stately old-fashioned article that its author himself was; only wanting the capacity which he possessed, by gentleness of tone or kindness of manner, to make itself agreeable. He deserves, however, all reasonable credit for his performance—for it was a work of no small labour to collect the materials for such a book.

* We are happy to hope that Mr. Gordon's forthcoming history will not allow this to be said much longer.

He who has never undertaken so arduous a task, knows little of the persevering patience it requires to get together into a congregated mass, to sort, select and arrange those "scattered fragments of broken" facts, which are the body and the essence of such a composition. The difficulty of discovering those who have the desired information, and the still more insurmountable difficulty of inducing them to communicate it, are enough to discourage any man, unless he be endowed with more than common equanimity, from making so wearisome an attempt. In this view, Proud's volumes deserve our sincere commendation. He has acted in the arduous character of a pioneer—he has gone before, and gathered up the segregated materials; and to the future historian he will at least serve as a land-mark, by which he may in some measure direct his course.

I have said that, after his failure, Robert resumed the duties of a teacher. This was his element, and perhaps the sphere of his most extensive usefulness. He took great delight in the languages—was well acquainted with Latin and Greek, and had also a considerable knowledge of French and Hebrew. With the Latin he was so familiar, that he thought he could understand a subject better in that language than in his own. Under such competent government, the school necessarily flourished; and he had the satisfaction of sending forth from it many, who have since attained a high standing in society, and become ornaments to the circles in which they have moved. His manners as a teacher were mild, commanding

and affectionate. I once heard a gentleman, who had been his pupil, speak with much satisfaction of Proud's conduct towards him on leaving school. He entered with perfect freedom into familiar conversation, enquired with the most paternal anxiety respecting his prospects in life, with the greatest kindness offered him some appropriate advice, and parted with him as a father parts with a son. It produced on the mind of this individual, though he was at that time but a boy, an impression of the deepest respect.

The venerable tutor relinquished his school about the year 1791, and employed himself in preparing his History for publication. It had been principally written for some time, but the circumstances of the revolution prevented its appearance, and it was not till the year 1797-8, that it was finally ushered into the world. As might have been anticipated, it was unsuccessful; and thus not only were several years of assiduous labour lost, and the fond expectations of authorship overthrown, but considerable pecuniary expenditures, necessarily incurred, remained without the hope of reimbursement. Thus disappointed in his literary views, he resigned the pen, as an author, and sat himself down, *in otium cum dignitate*. Having now survived the greater part of his most intimate friends, he seldom went abroad, as he had formerly been accustomed occasionally to do, for the purpose of visiting; but employed most of his time at home in reading and writing; sometimes in composition of his own, and sometimes in trans-

lating short moral sentences from various Latin authors, which he continued to do without the aid of glasses, even to the advanced age of eighty years. Many of his essays were poetical, but, of the number he has left, few rise above mediocrity. He appears at a certain period of his life, a little prior to the one just noticed, to have been the victim of frequent fits of dejection; and, at some of these seasons, he gave words to his distress in very moving numbers. Those of later date, however, appear more calm and confiding, and his closing days were passed in tranquillity and peace. He continued to live on thus, in great seclusion and uniformity, for many years, until a naturally strong constitution, which had generally insured him a good state of health, began to give way before the inevitable attacks of age; when, after languishing for eleven days, on the evening of the seventh of July, 1813, and in the eighty-sixth year of his age, he quietly sank into the rest of eternity, "like a shock of corn fully ripe."

Robert Proud was in person tall—his nose was of the Roman order, and "overhung with most impending brows." I remember having seen him when I was quite a small boy; his appearance was striking, and could not readily be altogether forgotten. I have not been able to recall the expression of his countenance; but I well remember the imposing effect, which the curled, gray wig, the half-cocked, patriarchal-looking hat, and the long, ivory-headed cane, had on my boyish imagination. I believe

Proud was one of the last of the old school—I mean those who adhered faithfully to the dignified dress of our ancestors. One by one they have dropped away, and with them has departed almost every trace of the olden time.

The character of this venerable relic of honest worth may be summed up in a few words: I give nearly the language of one who knew him well. He was a zealous advocate for useful learning, a man of regular habits and great temperance, and in his manners the model of a gentleman.

Requiescat in pace.—No proud mausoleum lifts its head to celebrate his praises; his nameless grave owns no memorial, but the green sod with which Nature has adorned it; but many an one is yet living, who, in the grateful recollection of his worth and virtues, can sanctify the memory of **DOMINE PROUD.**

ORIGINAL LETTERS

OF

WILLIAM PENN.

ORIGINAL LETTERS, &c.

The following three letters have been selected from several which are manifestly in the handwriting of William Penn, and were probably the rough draughts made by him, and subsequently copied. They were found among the papers of the late estimable Doctor John Syng Dorsey; who, it is supposed, derived them from his grandfather, Edmund Physick, formerly an officer under the Proprietary government. Mrs. Dorsey has kindly given permission to make the publication.

It may not be improper to observe that the Earl of Rochester, to whom one of the letters is addressed, was not the witty and profligate nobleman who once possessed that title. That unhappy young man, worn out by his vices, expired in 1680.

1. *To the Lord Keeper North.*

MY NOBLE FRIEND

It hath been sometimes a question with me whether writing or silence would be more excusable, for it is an unhappiness incident of great men to be troubled with the prospects of those their power and goodness oblige; but because I had rather want excuse for this freedom than be wanting of gratitude to my benefactor, I determined to render my most humble thanks for the many favours I received at

the Lord North's hand, in the passing and great dispatch of my patent. I thank God I am safely arrived, and twenty-two sale more; the air proveth sweet and good, the land fertile, and springs many and pleasant. We are one hundred and thirty miles from the main sea, and forty miles up the freshes. The town platt is a mile long and two miles deep; on each side of the town runs a navigable river, the least as broad as the Thames at Woolwych, the other above a mile; about eighty houses are built, and I suppose above three hundred farms settled as contiguously as may be. We have had since last summer about sixty sail of great and smal shipping, which we esteem a good beginning: a fair we have had, and weekly markett, to which the ancient lowly inhabitants come to sell their produce to their profit and our accommodation. I have also bought lands of the natives, treated them largely, and settled a firm and advantageous correspondency with them; who are a careless, merry people, yet in property strict with us, though as kind as among themselves; in counsel so deliberate, in speech short, grave and eloquent, young and old in their several class, that I have never seen in Europe any thing more wise, cautious and dexterous; 'tis as admirable to me as it may look incredible on that side of the water. The weather often changeth with notice and is constant almost in its inconstancy. Our trees are saxafrax, cyprus, cedar, black walnut, chestnut, oak black, white, red, Spanish and swamp the most durable:

divers wild fruits, as plum, peach and grape, the sorts divers. Mineral of copper and iron in divers places. I have only to add, that it would please the Lord North, to smile favourably upon us, a plantation so well regulated for the benefit of the crown, and so improving and hopeful by the industry of the people, that since stewards used to follow such enterprises in ancient times at least encouragement and countenance might be yielded us, whose aims shall in every thing be bounded with a just regard to the king's service; and we think we may reasonably hope, that, England being the markett both of our wants and industry in great measure, there is interest as well as goodness of our side. I have pardon to ask for a poor present I make by the hands of the bearer my agent and kinsman Capt. Markham; all I have to say is this; 'tis our country produce, and that of old time offerings were valued by the heart that made them. I end with a congratulation of the honour the king hath joyn'd to thy great merit, and my sincere and most affectionate wishes for thy prosperity; being one of those many, whom thy goodness hath obliged to own and approve, as really I am,

Thy very sensible, thankfull friend

and servant to my power,

WM. PENN.

Philadelphia the 24th, }
5th mo. July, 1683. }

TO THE LORD KEEPER NORTH.

2. *To the Earl of Rochester.*

Philadelphia, 2d, 12mo. Feby. 1683:

MY NOBLE FRIEND

It cannot be strainge to a Lord of so much experience, that in nature, all creatures seek succour against might; the young from their old and the feeble from the strong, and that the same nature, by reciprocal instinct, inspires the old to protect their young, and the strong the weak of their own kind. This, my noble Lord, is much of my case and this trouble; and to whom can I goe, with more reason and hope than to him that hath, with so much honour and truth and a perpetual success, been the kind and constant patron of my just cause! Lett this therefore, noble Lord, meet with thy usual favour; which will add to the many bonds I am under, as affection and gratitude to thy just interest and service.

My last to the Duke, brought with it a copy of a demand made by the Proprietor of Maryland, with my answear to it, another of which I have presumed to inclose, and pray that somebody may be commanded to read it at thy rising or undressing, as being too long for a time of business, and yet the matter would not admit of more contraction. I dare humbly hope that the king's right, that of his royall highness, and what their grace and favour have made mine, against the pretentions of that Lord, will appear in my answear, with a more than ordinary force and evidence. To which I pray leave briefly to

add, first that the land in question was never demanded by him of those in possession, till by silence and omission forfeited; the lower parts of this river and bay having never been askt for of the Dutch for six and twenty years, much less reduced; if a title [?] by neglect in an improv'd country, here more, where the wildness of the soyle rendereth it not above the sixtieth part to that which is labour'd and improved. The upper part of this river, from Christina river to the falls, was never demanded of the Sweeds nor Dutch neither, since they reduced it; which is now about thirty years from when the crown of England took it in the 1664 as I take it; and has been since held *jure belli ac pacis*. This is not all; he never run his line, these fifty years that he hath had his graunt—a default never to be plac'd to the accompt of the possessor, nor yet to the crown, for granting it to another; non-improvement and neglect of fixing bounds makeing the loss just on his side, were his pretensions otherwise right; for as there is no transgression where no law is, so where there are no bounds sett, nor possessor found, nor any claimant appears, there cannot (with submission) be any title against the planter. Nay, it is the practice of all these parts of America, and was the express condition in all the Duke's patents to the free men planters of his colony, they settling and improving the premises. In the next place, what he seeks never was, as well as it is not, in his possession, consequently never cost him any thing to improve, nor has he lost any income by its

being mine. To this I add that he doth not want it: he hath 200 miles (for two degrees) upon both sides of the bravest bay in the world, Cheseapeack, while I have but one side of an inferior one, and none at all, it seems, if he could have his will, to the ruin of (perhaps) the most prosperous beginings in America. I have but two creeks that ships of two hundred tun can enter out of the river for harbourage; he has fourty (and to spare) that ships of five hundred tun can enter and ride in. And tho' this argument ought not to prevaile against absolute right, yet, in a case circumstanced as this of mine is, I hope that prudence and proportion, together with my arguments of contrary right, will more then even the scale. With God I leave it, and my noble friends: but, if I am herein disapointed, it will be a ruinous voyage to me, having spent, in my preperations, transport and maintenance of the quality of Governour, aye and the government too, with the appendant charges, a vast sum more then ever I received; and I hope and believe the King and Duke, by favour of my noble friend, will never suffer me to fall short of the most important part of the grant and country, and which that Lord hath no right to, want of, nor loss by. And now, my noble friend, give me leave to vallue myselfe to the Duke by so acceptable a proxy as the Lord of Rochester in his affairs of New York: he must indeed remember the humble advice I gave him, when in his closett he askt me my opinion of his selling of New York, what I writt to him from hence in that affair, and the zeal and respect I have

shown in his service herein, and that not without success; (tho' any one will think I did not play the cunning man in it;) and I cannot suffer myself to believe that a prince of his generous and steady temper will permit so fatal a stroke to come upon my honest interest, nay his own, (and that of no small moment to New York, for it is the garrison's grainery,) as to let that Lord go away with the only river and bay I have any interest in, who, besides that he has no right to them, needs them not, never had them and so loses nothing by the want of them, I humbly conceive is neither more able nor willing to serve the Duke there or here. I have done: only please to remember what I told the king at Windsor, who graciously permitted me to render him my thanks and take my leave of him, to witt, that if ever any unhappy occasion came to try the truth of the assurance I gave the king of the quaker's unfaction and peaceable principles towards him and his government, my life and estate on't they would not derogate from my character; that if I could lye to any I would not choose to do it to him, whose goodness had not only obliged me but also putt me more within his power to be even with me. This, it seems, is but too soon confirmed by the madness and folly of some evill and restless men. God defend these kingdoms from blood and misery, and send us peace in our dayes; which I humbly wish my noble friend to think upon in behalf of my peaceable friends, lest men, even disinterested, that look on, should say with too much truth that in England, in times of

dainger there is no odds in being innocent. I shall add no more but my best wishes, and that I am with much zeal and affection, my noble friend, thy most obliged and faithful friend

WM. PENN.

If I may pray, please to give my most humble duty to the King and Duke.

FOR THE EARLE OF ROCHESTER.

3. *To the Marquis of Hallifax.*

MY NOBLE FRIEND,

It is an unhappiess small folks are exposed to, that the discharge of their duty is an increase of their debt. I am one of those, who am obliged to this acknowledgement, and yet the freedom of making it, needs an apology: but I take comfort in this, that I have to do with a very merciful creditor, one that is as easy to forgive as ready to oblige; which is all the defence I shall make for myself in the liberty I take. I hope my agent hath presented thee with my last and the respects I bear so honourable a friend. I did in that give some account of our condition here, which (thanks be to God) mends upon us. Our capital town is advanced to about 150 very tolerable houses for wooden ones; they are chiefly on both the navigable rivers that bound the ends or sides of the town. The farmers have got their winter corn in the ground. I suppose we may be 500 farmers strong. I settle them in villages, dividing five thousand acres

among ten, fifteen or twenty families, as their ability is to plant it. Germans, Dutch and French are concern'd in our prosperity with their own; for here are come three parties (one of each) as spies to the multitude, they say, behinde, that on their report will also embarque with us. The Germans are fallen upon flax and hemp, the French on vineyards. Here grow wilde an incredible number of vines, that tho' savage and so not so excellent, beside that much wood and shade sower them, they yield a pleasant grape, and I have drunk a good clarett, though small and greenish, of Capt. Rappe's vintage of the savage grape. The only interruption I meet with is from the unkindness of my neighbour proprietor the Lord Baltimore, who not only refuseth compliance to the king's commands, and the grant he and the duke have graciously made me, but as impatient of the decision of our joynt soveraign, would anticipate that by indirect waies of his own, who to say true, by the course of his affaires, yields him as little regard as ever he can; he taketh himself to be a prince, that, even to his fellow subject and brother proprietor, can of right determine differences by force, and we have been threatned with troops of horse (which are fine things to the wood) to reduce those parts in my possession to his power and greatness, aye though king and duke had them quietly before, and so were pleased to deliver them to me. And till I had preached another doctrine to him, as that the king was lord chief justice and high sheriff of America, that he finally

must judge, eject and give possession, he refused to go with me to king and counsell; saying he had nothing to do with king and counsell, but would take his right where he could get it. He also told me, my patent had a proviso and exception of appeals, but his had not. I told him, that omission was not a privilege but a prejudice in my opinion; however sovereignty was reserved I was sure, and, if the king was not appealable from Maryland, he was not sovereign of Maryland, but the lord Baltimore. This softend [him?] a little to his duty, and now he pretends to referr, as do I, with an intire submission. My case I send as an answer to his demand; to which I only pray leave to add, that he never was in possession, and he consequently looseth nothing by the want of it, that he ever had. Further, he never claim'd it, not of the Dutch for 26 years after his graunt, nor of the Swedes for seven and forty years, the one having the upper part of the river, the other, to wit the Dutch, the lower and all the bay: which in an improved county is a forfeiture by omission and neglect; more it must be in a wild place, where the land is not the sixtieth part to the labour. To this I add, he never run his line, nor fixt his bounds; and with submission, where there are no boundaries, possessors, nor claymant, but long unquestion'd possession on another side, there can be no title pleadable against the planter; the maxim of the civil law holding good in this case, *Quae nullius sunt in bonis dantur occupanti*. But this is not

all; he needs it not; I do; without it I have nothing, and without it, he hath fourty brave harbours, having 200 miles for 2 degrees of the bravest bay in the world, Cheasapeak, and that on both sides, replenisht with many stately rivers and coves for the biggest ships. I have two that ships of two hundred tuns perhaps may enter out of the river; in the bay, none, but for small craft; and where right is, to be sure prudence and proportion will more than even the scale. I must (without vanity I can) say, I have lead the greatest colony into America, that ever any man did upon a private credit, and the most prosperous beginnings that ever were in it, are to be found among us; and, if this lord (who may remember that his country was cutt out of Virginia, to the great abatement of the interest of that province, and this not for debt, or salaries due, but as meer grace) shall carry away this poor ewe lamb too, my voyage will be a ruinous one to me and my partners, which God defend. And, my honourable friend, I shall only pray that my case may be remember'd and recommended to the king by my noble friend the marquis of Hallifax. I am not to be blamed for this liberty, when it shall be consider'd how great a place his witt, honour and abilities have with the king, and how much, and with what success he hath acted the friend to my poor concerns. I hope the innocency of our friends at this juncture hath not dishonoured the lord of Hallifax former favours to them; as I take confidence to believe, that the innocency of men shall protect them in Eng-

land with their superiours in evill times, else the odds would be little in being such. I say no more, but pray God to reward all thy favours to them and me, and to give me leave to value myself upon the character of

My Noble Friend,

Thy very affect. cordial
friend to serve thee,

W. P.

Philadelphia, the 9th of the }
12th month, 1683. }

TO THE MARQUIS OF HALLIFAX.

BIOGRAPHICAL SKETCH

OF

SIR WILLIAM KEITH,

ONE

OF THE FORMER GOVERNORS

OF

THE PROVINCE OF PENNSYLVANIA.

BY

A MEMBER OF THE BIOGRAPHICAL COMMITTEE.

BIOGRAPHICAL SKETCH, &c.

At this distance of time, little information can be had in respect to a man who died upwards of seventy years ago, and has left no descendants or connexions in the country.

While he lived, he was an active and important organ of the provincial government, and may be conceived to have been a person of considerable mental powers.

Where he was found, and why he was selected by William Penn to administer the executive government, is not now in our power to ascertain. His surname would indicate that Scotland was the place of his birth or of his extraction. He certainly was a man of education; and, perhaps, from some circumstances, we might be authorized to conjecture that he was of the profession of the law.

In 1717, he succeeded Gookin, who had not been very popular, and the difference of his manners soon rendered him a favourite of the people. His first address to the assembly was calculated to win their affections at the expense of his own dignity.

We cannot at this time thoroughly comprehend some parts of the services which he alleges that he has already rendered.

Why he should have undertaken to present to the “Prince Regent” the address of the assembly to the king, and why it should have been an “*expensive* application,” we know not.

He next claims a credit with the people of this province, on the score of his having diligently, and at a considerable charge, obtained the commission of governor. We can hardly suppose that William Penn exposed the office to sale.

These are some of the mysteries which frequently accompany transactions of remote times, when no cotemporary pains are taken to prepare evidence.

On the death of William Penn, which shortly afterwards ensued, Sir William Keith appears to have been inclined to promote the interests of the elder branch; although the will of the illustrious proprietor strongly indicated that he considered the elder branches fully provided for by the Irish estate which devolved on them, and that the entire interest he held in the province of Pennsylvania should appertain to his children by Hannah Callowhill.

William Penn, the eldest son by the first wife, conceiving himself entitled to the government, whoever might be proprietor of the soil, soon sent out a commission to Keith, appointing him deputy governor; which the latter accepted, although at the same time in a studied and ambiguous message to the assembly he intimated some doubts—and he must have felt dissatisfaction at the widow’s having transmitted the copy of the will to James Logan, without any communication to him.

In the mean time a perfect harmony between himself and the assembly continued—they approved of his vigilance in respect to some Indians—they assented to his establishing a Court of Chancery, in which he presided—and the only dissatisfaction that his public conduct for a long time excited, seems to have been his preference of the dignity of this court to the conscientious scruples of the *Friends*. John Kinsey, a lawyer of considerable eminence, who was afterwards Chief Justice of the province, refused, from religious scruples, to uncover his head in the court, and an officer was directed to take off his hat. The quarterly meeting presented a very respectful address to the governor, (which may be seen in *Proud's* history,) and an order of court was thereon made, declaring that keeping the head covered should not be construed into a contempt of court, but be considered as an act of religious liberty. Why he, who had before that time claimed so much credit for the pains he had taken to procure the sanction of parliament to the admission of an affirmation in lieu of an oath, should have shown his disregard of a religious peculiarity to which the *Friends* were well known to be sincerely attached, it is difficult to conceive. It must for a time have diminished that popularity which with so much pains he had already acquired; and he could not plead ignorance of their pertinacious adherence to a practice for which, in the opinion of the society, there is the greatest authority.

I notice this particular as indicating the character

of the man, without intending to enter into the history of his public administration. This history may be partly collected from the plain and impartial narrative of *Proud*, and partly from the panegyric of the *Historical Review*, printed in London, in 1749, and by many attributed to Dr. Franklin. Both agree that when his commission as governor was suspended by the appointment of Patrick Gordon in 1726, he obtained a seat in the house of assembly as a representative from Bucks county, and that he took all the means in his power "to divide
" the province, embarrass the governor, and distress
" the proprietaries."

He afterwards went to England, and soon afterwards addressed to the king a representation on the state of the colonies in North America, which has been inserted at length in *Burk's History of Virginia*, (printed at Petersburg in 1805.) It is in some respects a very valuable document, as it embraces an account of the produce, commerce, and consumption of this country in 1728, more distinct and perhaps more accurate than can be found elsewhere. He represents that the colonies then took off one-sixth of the woollens of Great Britain, more than double that value of their linens and calicoes, a considerable quantity of East India goods, great quantities of English silks, &c. and he describes their naval commerce as very great and constantly increasing. He proposes some schemes for consolidating the provincial governments, and enlarging and systematising the power of the crown; one of

which is, (probably with a view to an appointment in his own favour,) that judges shall be sent out from England with a jurisdiction over the whole country, and to be independent of the provincial legislatures.

This advice, although well calculated to increase and prolong the royal authority, was not attended to, or perhaps was found impracticable.

Disappointed in this quarter, he made an effort to support himself as an author, and in the year 1738 he published a history of the colony of Virginia, proposing to proceed with histories of the other colonies; but it is probable that this work, although not ill written, was not very successful, for he proceeded no further in his design. He died, it is said, in great poverty in London, about 1749. His widow, lady Keith, survived him several years. She lived immured in a small wooden house in Third street, between Market and Arch streets, with an old female attendant as companion, refusing all communication with society, and reduced to great difficulties for subsistence. The house itself, long after her decease, was rendered memorable by one of those melancholy casualties which sometimes occur, even in populous cities where help is most at hand. In the year 1786, it was consumed by fire, and four persons perished in the flames.

Sir William Keith seems to have been a selfish and an artful man, whose true character was perhaps not known to William Penn at the time of his being appointed. His first ostensible attachment

was to the popular interest in opposition to that of his employer the proprietary; and his evident object was to enrich himself, not to contribute to the relief of the family at home. His next public step was to promote the interest of the elder branch instead of the younger. In this he discovered little penetration; he offended those who, he might easily discover, had the power to injure him, and courted the favour of those who had no permanent benefits to bestow.

The remnant of his life was embittered by the consciousness of disappointed ambition and the pressure of hopeless poverty. He saw the younger branch which he had opposed, rising rapidly in wealth and consequence, and the province, under the temperate administration of Gordon, peaceable, prosperous, and contented.

In the work I have last mentioned it is said that the "ghosts of departed governors" were to be frequently seen wandering about the vast metropolis of the British empire, and among these, perhaps, that of Sir William Keith was not the least querulous and unhappy.

MEMBERS OF THE SOCIETY

NEWLY ELECTED.

CONTRIBUTING MEMBERS.

| | |
|---------------------|------------------|
| George Fox, | Jacob R. Smith, |
| Richard Penn Smith, | Paul Beck, jr. |
| Richard C. Wood, | Levett Harris, |
| Dr. George B. Wood, | James C. Fisher, |
| Turner Camac, | Thomas Hugh. |

CORRESPONDING MEMBERS,

In addition to those at pages 13 and 14 in the 1st half volume.

John N. Conyngham, *Luzerne County*.
Joseph W. Rowland, *Montgomery County*.
Frederick Smith, *Berks County*.
Charles B. Penrose, *Cumberland County*.
Isaac A. Chapman, *Luzerne County*.
Thomas Wistar, jun. *Montgomery County*.
George Taylor, *Pottsville, Pa.*
James Cox, *Bucks County*.
Samuel Wagner, *York County*.
Wm. H. Dillingham, *Chester County*.
Alexander Thompson, *Bedford County*.

HONORARY MEMBERS.

General La Fayette, *La Grange, (France.)*

The Marquis de Marbois, *France.*

Chevalier Botta, *Italy.*

Charles Smith, *Baltimore.*

Charles Wilkes, *New York.*

The Rev. Jedediah Morse, *New Haven, (Conn.)*

Daniel Lyman, *Providence, (Rhode Island.)*

Richard Stockton, *Princeton, (New Jersey.)*

Thomas Horsefield, *M. D. London.*

* * Several papers are in preparation for the next half volume.

ERRATUM.

Page 56, line 14, for "*even*," read "*were*."
